For the anthracnose of the blackcaps, and the yellow rust of the blackberry, use the concentrated solution of sulphate of copper, before the buds open. Then spray with the Bordeaux mixture one-half strength or the ammoniacal carbonate of copper before the blossom buds unfold, and two or three times after the fruit has been gathered, at intervals of two or three weeks. The first disease attacks the canes principally and more attention in spraying should be given to them, than to the leaves.

FOR THE STRAWBERRY.

Spray with the Bordeaux mixture, one-half strength, and Paris green, one pound to 100 gallons, for the leaf blight and the "spotted paria," as soon as growth begins in the spring. Just before the blossoms open use the Bordeaux mixture, same strength, *but no Paris green*. After the fruit has been gathered Paris green and the Bordeaux mixture should be used if the bed or field is to be carried through another season.

FOR THE POTATO.

As soon as the larvæ of the potato beetle begin to appear, spray with the Bordeaux mixture, one-half strength, and Paris green, one pound to 100 gallons. Use the same mixture as often as they appear in sufficient numbers to be injurious. If the weather should be warm and moist, applications should be made at intervals of from one to three weeks after the vines have blossomed, of the Bordeaux mixture, one-half strength, or the ammoniacal carbonate of copper, one pound to fifty gallons of water, even if there are no larvæ present. The sulphate of copper, one pound to 500 gallons, should also be tried on a small scale to test its value.

They Will be Continued.

Mr. Falconer's brief notes on "Early flowering shrubs" under the heading of the "Nursery Trade" in the AMERICAN FLORIST for April 21, give data on the relative order in which, and the date at which, the first flowers open, etc., which I have long wished to obtain. I wish you could induce him to continue these notes throughout the season. They would be extremely valuable to all of us. His list of plants for observation is the best in the north, if not in the whole country. In the height of the season so many kinds bloom simultaneously that no strictly consecutive order can be given. But where they won't follow in single file let them march abreast in the procession. Habit of growth, aspect of foliage, etc., might be noted to give fullness and variety as in the FLORIST article referred to above. WM. MCMILLAN.

Buffalo, N. Y.

THE PROGRAM for the Atlanta convention of the American Association of Nurserymen is now in the hands of the printer and will soon be issued by Secretary Green. We learn that the Georgians are preparing to give the visitors a royal welcome and to show them not only the "New South" in its most attractive garb, but such an exhibition of southern hospitality as they will long remember. They propose further to demonstrate that the climate of Georgia has been much maligned and that the anticipated discomfort from exceedingly hot weather there in June is a myth.

MR. W. C. BARRY, of Ellwanger & Barry, Rochester, visited Chicago this week to arrange for a large exhibit at the World's Fair. Mr. Barry believes that the nursery business this spring will average well with previous seasons. While the "grip" interfered to some extent with sales through agents still the average will show up satisfactorily, the long planting season, owing to the cool spring, assisting materially in lengthening the list of sales.

REPORTS from the vicinity of Boston indicate that wistarias, magnolias and other early blooming shrubs have suffered severely from the recent frosts, in some cases the flower buds being completely destroyed. Small evergreens have also fared badly from the effects of the long dry spell combined with the cold winds.

MR. W. C. STRONG, of Waban, has opened a city office for the transaction of his nursery trade at 57 Bromfield street, Boston.

IF ANY members of the S. A. F. paid money at Toronto for group photos that were not afterward sent to them, they will please advise us of the fact.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

" Hinze's White, short	1.00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this. Stock guaranteed A1. No charge for packing.

Vases in Iron, Rustic, etc., best makes, will sell for a song to close out. Window Boxes, we still have a quantity left if you want any this is the chance of a lifetime. Price 1c. per lineal inch in length.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is
Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.
Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.
Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.
In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. **Price, strong plants, $8.00 per 100.**

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

How Shall We Advertise Seeds?

Doubtless the majority of advertisers who have an extended experience feel, as we do, incompetent to formulate any definite plan that will be really useful to others. The values of mediums are continually changing, while methods that were successful in the past fail to bring adequate results in the present. With the changed conditions of to-day and the increased competition in the mail seed business, we no longer expect to obtain direct results from display advertising as we did formerly.

Ten years ago nearly all our expenditure in newspaper advertising was devoted either to offering collections of seed or "booming" rare novelties; one of our most notable successes in this line was the Cuban Queen Watermelon, which we advertised very prominently in 1881 and 1882, and from which the direct results showed a good profit, but it must be considered that at that time no new watermelon had been introduced for many years and such a variety was indeed a novelty. Since then many new varieties, not only of melons, but of all other vegetables, have been introduced, consequently "novelties" have, in a measure, lost their attractiveness. Fifteen years ago, when we first advertised a special introduction collection of seeds, our advertisements were productive of most excellent results, as many as sixty thousand collections having been sold in a season. Since then this plan of advertising has been so generally copied that it is no longer effective.

Anyone glancing at the magazines and papers of ten to fifteen years ago, and comparing the limited space occupied by seed advertisements in comparison with the columns and pages now carried by the same journals, will see how unreasonable it is to expect corresponding results. In the meanwhile, by the continued issue of ever improving seed catalogues, the rural public have been so educated that they are not only able but desirous of making their own selection of seeds for their special requirements, and the "ready made" collections do not appeal to them as formerly.

While our business has been largely built up upon newspaper advertising, our honest opinion is that now it is impossible, as in some years past, to trace any direct profit from new customers procured from our annual advertising. By this we mean not only in direct returns, but also in the orders which these new applicants send from the catalogues,—and these we are largely enabled to trace by means of a distinctive order sheet. And yet we would by no means entertain the thought of discontinuing, or even of reducing, our advertising, as in its cumulative effects and indirect influence we regard it as essential to the continued success of our business. We are firm believers in the moral influence of persistent newspaper advertising; by the time our advertisement appears in January, we have already mailed to our own lists several hundred thousand of our spring catalogues. Now the effectiveness and continued life of these catalogues in the homes of the recipients is, to our mind, largely influenced by the continued appearance of our advertisements in the religious and home journals. Of course these customers do not mention any paper in writing, but we would prefer that some other house than our own should try the experiment of omitting advertising for one season and testing the results.

One other point in advertising seeds for a mail business, and a very important one, is the judicious distribution of seed catalogues. Every advertiser of "something for nothing" knows the existence of a very large class of postal card friends who write for every handsome catalogue published. Several of our competitors in the seed business overcome this waste distribution by charging for their catalogues, but this plan has never appealed to us from the fact that it puts the sender to such trouble. The plan which we have adopted for several years past, and which we purpose to pursue again this season, is to have our advertisements carefully worded, dwelling upon the quality of the seed rather than the excellence of the catalogue, then offering the catalogue free *to intending purchasers*. This plan, while not productive of the excessive number of replies which would be obtained from enlarging upon the beautiful catalogue, colored plates, hundreds of illustrations, etc., brings a much better class.

We further guard the circulation of our catalogue in many advertisements by the statement that while free to intending purchasers, others desiring the book for information should enclose ten cents, which is less than actual cost of publication.

From careful records kept for several years of advertising in this manner, we find the average cost of returns twenty-two cents per applicant.—*W. Atlee Burpee in Publicity.*

R. T. KNAPP succeeds Fred. O. Smith in the seed business at Norwalk, O.

MR. J. C. VAUGHAN, Chicago, has opened an eastern branch at 12 Barclay street, New York.

VISITED CHICAGO: F. Howcroft, London; H. W. Buckbee, Rockford, Ill.; J. E. Northrup, Minneapolis; Albert McCullough, Cincinnati.

MR. W. ATLEE BURPEE and Miss Simmons were married at the West Spruce Street Presbyterian Church, Philadelphia, Saturday, April 30.

MR. EDWARDS ELY, well known for many years as a seedsman, in Newark, N. J., died on April 22 aged 67 years. His specialty was the market garden trade. His son, Frederick, will carry on the business.

FROM this date please address all mail for the FLORIST to 322 Dearborn street, Chicago.

HARRISII, ROMANS, FREESIAS, VON SIONS, VALLEYS, ETC.

W. W. BARNARD & CO.

6 and 8 North Clark Street, CHICAGO.

St. Louis.

A week of sunshine has given all classes of flowers good color, and put it in the hearts of the people to buy flowers. The supply and demand are about equal, and prices hold good. The plant trade is now very brisk.

Mr. Tesson is building another rose house of the same dimensions as the one in which he has been growing such fine roses, but none of the roses from this house will get outside of the city. They will all be wanted here.

Two orchids are now in bloom at the Missouri Botanical Garden. Cypripedium pubescens in the bog and Calypso borealis in the wild garden. The latter is an especially interesting little plant.

Mr. James W. Dunford, who has been the St. Louis correspondent of the AMERICAN FLORIST, has resigned his position as assistant head gardener at the Missouri Botanical Garden, and has gone to Elgin, Ill., where he will lay out the grounds of the North Western Insane Asylum.

Prof. Trelease, who is now in California studying the Yucca, has sent the Garden some rare plants, among them Yucca Whipplei and Opuntia basilaris. J. C. D.

"How They do It in England"

With the above comment a reader sends us the following advertisement clipped from an English horticultural paper:

IF you look through my advertisements and send even a 1s 3d order it will be a help to me and you won't miss the amount. In these hard times have little to depend upon for a living, hence my asking your patronage.—W. M. REAMSBOTTOM, Geashill, King's Co.

This appeal must have brought a host of orders.

For Spring Potting.

The best time to pot off small Palms and Foliage Plants is NOW, and they will then be ready to fill houses with for summer, after bedding plants are cleared. Cheap plants as follows:

	Per 100

THEO. ECKARDT,
RIDER'S P. O., Baltimore Co., Md.

The World's Fair.

The World's Fair grounds are beginning to show some signs of spring. The grounds surrounding the Horticultural Building have been well prepared for planting, having a deep surface layer of rich soil, covered with sod taken from the old Jackson Park lawn. The walks are being well gravelled.

The Horticultural Building is practically completed and it presents a noble appearance. Its magnitude is fairly overwhelming. Never was such a magnificent building devoted to horticulture at any previous exposition and in it will be such a display as the world has never before seen.

Last Monday Mr. W. C. Barry, of Ellwanger & Barry, the well known nurserymen of Rochester, N. Y., visited headquarters to arrange for the exhibit by his firm. Their display will pretty well cover the field of ornamental nursery stock, including specimens from each department of their business in the ornamental line. It will probably be the largest and most varied exhibit by any one nursery firm. Mr. Barry was much impressed with the immense amount of work that had been done and the magnitude of everything connected with the exposition. He will plant part of his exhibit this spring and the remainder next fall and the following spring.

The great rose garden, of which we gave a plan in a recent issue, is being rapidly planted with the hardy sorts of roses received and things all through the Hort. Department are rapidly taking form. Some 2000 climbing roses are on the way from the Dingee & Conard Co. to train over the wire trellis that surrounds the rose garden. "Uncle John," as Mr. Thorpe is familiarly known among the exposition people, is as busy as a bee and as happy as a lark overseeing the work of planting that is going on briskly all over the grounds at this time.

The greenhouses are filling up with seedlings and young plants—not forgetting the chrysanthemums—and progress is to be seen on every hand. The heating apparatus for the greenhouses, consisting of four of the largest size Furman steam boilers, has been installed. The Horticultural Building itself will also be heated, but the apparatus will not be installed until some time this summer. According to estimates submitted it will take no less than *ten miles of pipe* to heat the great structure.

Now is the Time to Buy

DRACENAS FOR SPRING SALES

We offer the following sizes:

Worcester, Mass.

Another Easter has come and gone and we are all a little better off financially but worse physically.

The trade in Worcester was considerably larger than last year. Prices were good and the supply fully sufficient. Harrisii brought $3 a dozen at retail readily and best roses $4. There was quite a call for Harrisii in pots, and 8-inch pans of tulips, narcissus and hyacinths went like hot cakes.

Every year there is a noticeable falling off in the demand for made-up stuff; loose flowers have the call. The demand for long stemmed carnations has increased wonderfully and it looks now as if the carnation would soon rival the rose. Trade was a little dull before Easter, but indications point to a better business after this.

Several churches bought their lilies direct from Bermuda this year. It was rather poor stuff; lilies were small with about eight inches of stem and the leaves had all turned yellow. They are usually satisfied with home grown lilies after one trial, and in fact the same money put in Harrisiis in pots would make a great deal better showing. A. H. LANGE.

Toronto.

Trade still keeps pretty lively in this town and the weather has been cool and fine; cool enough to prevent the buds from swelling much so that spring will be delayed to a later date than last year.

The accounts of the increased Easter business from your various correspondents in last week's issue were perfectly exhilarating and show I think that the clubs by holding shows, etc., etc. have done a vast amount of good to the trade and to all engaged in the horticultural profession. The founders and officers (past and present) of the various clubs should feel highly gratified that their efforts are beginning to bear fruit.

I omitted to mention in my last notes that at the meeting of the association I was directed to thank the AMERICAN FLORIST for the valuable gift of a copy of the FLORIST'S directory. E.

Syracuse, N. Y.

It has been my pleasure to record increasing sales year by year at Easter. Certainly the one just passed has eclipsed by far all previous ones. The volume of trade was simply enormous, and surprised the florists. Flowering plants of all kinds sold readily and at good prices. There was not a great demand for set pieces, loose flowers having the call. At almost all the Sunday schools plants were given away. This of itself made a large drain on the florists. Another very pleasing new feature was the beautiful floral decorations in the windows of the large dry goods and other stores, which help so much to educate the people, and the Central New York Horticultural Society feel that their efforts in this direction are meeting with great success.

The gardeners in the private places made great preparations for a good supply of flowers, which were appreciated. Mr. Meneilley, who has charge of Mr. Hamilton White's greenhouse, had a magnificent crop of Niels and other roses. He has also some fine seedling carnations of great promise of which I shall have more to say in the near future.

Mr. Bartholome, who was for some years head gardener to Mr. Theo. Dissel, started for himself last fall and has one of the best built greenhouses I have seen. It is 120x20. He grows mostly carnations. His Silver Spray were simply grand, and his pansies too were remarkably good. He intends building a rose house this summer. Henry Morris, of Elmwood Park, has also made additions to his greenhouses.

The following changes have taken place in private establishments during the year: Mr. William Hawson, late of Oswego, head gardener to Mr. Theo. Dissel; Mr. Campbell, head gardener to Major Alex H. Davis. H. Y.

THE FLORIST is still growing and a removal to larger and more convenient quarters was necessary. It found these at 322 Dearborn street, where mail should now be addressed.

YOU CAN'T AFFORD to do business without a copy of our new trade directory and reference book.

THE Society of Minnesota Florists has decided to hold a three day rose show at Minnetonka the latter part of June.

REPORTS show that the cold rainy weather has seriously retarded the opening of spring bedding plant sales in the west.

Proper Names for Colors.

THE WABAN ROSE.

It is very often the case that one may be misled by the indiscriminate use of terms which do not exactly express what is meant. We hear of such things as "Yellow whitewash," "A light shade of kid in gloves," "Oval dishes" and "red hair," and we never smile! The absurdity of such expressions never occurs to us. Who ever heard of a *shade* being light, or a *white* being yellow? And why should the elliptical shaped dish be termed oval, and the light russet brown hair red? Yet however loose such terms may be we must acknowledge that we obtain a very clear notion of their meaning. And why? Through custom! But to speak correctly, if red is a color whose extremes are scarlet and crimson, then the girl whose natural hair is actually scarlet is a splendid character for the dime museum. She is a unique.

Now, expressions with such wide latitude as these are legitimate perhaps when employed with their usual aptitude, in our ordinary walk in life, but technically, when we come to serious business their use is absolutely inexcusable; they promote confusion and distraction; they are dangerously indefinite.

When we come to color description we are at a loss to know what names to use; everybody seems to have a different idea about the scope and limitation of some certain name, and as a natural result one rarely receives any adequate and clear impression of the color some one else is attempting to describe. For instance, some of our commonest of color terms are indefinite to a bewildering degree, they are too general, they need some limitation. "Sky blue" is an indefinite term, there are a thousand different blues in the sky, which may be seen under a thousand varying conditions of light and atmosphere, but the intense blue of the sky at the zenith on a clear day is an unvarying standard color. Then why not describe such a color in just such a way? There should be no question, no doubt as to our meaning, when we describe a color, and such definiteness is quite within the bounds of what is possible; the one thing *necessary*, though, at the beginning is an absolutely reliable standard, a standard which shall be familiar to everybody. Thus the blue which I have spoken of exactly meets the requirements which a perfect understanding between two or more persons when talking about color demands.

In the choice of some particular flower for an accurate color description, the Waban rose for instance, there are more ways than one of arriving at the truth. But if the truth is reached we do not care much about the way that led to it. We will admit that there are longer and shorter ways, but it by no means follows that the shortest way is the best. If, therefore, the way I have chosen to describe certain colors may seem circuitous it must be remembered that I have tried to circumvent obstacles and avoid precipices.

The Waban rose and its foliage have certain distinct qualities of color which I think will be found exclusively its own property. In no other rose do I find the same delicate play of pink color. To sum up its description in precise terms I would describe the "Waban" as follows:

1. The pink is composite, it shows a bluish tincture at the outer edges of the petals and a decidedly yellow effect toward the juncture with the stem.

2. The greenish-yellow color at the stem juncture has a strong influence with the pink under strong light.

3. Under artificial light the pink is of a quality which gains almost immeasurably in depth or intensity and loses in broken tone.

4. Under strong sunlight the pink gains in its intensity, retains the bluer tones which are entirely lost under artificial light and shows its delightfully broken tones in almost infinite variety.

5. On account of the varied character of the pink the flower under all conditions has a soft appearance of color, which under artificial light is greatly accentuated and glows in an intensity of yellowish pink when the light is strong.

6. The green foliage leans strongly toward yellow tones.

In a word, what, from this description, can we say of the Waban's color, which will comprehend its chief characteristic? This, I think: It is a pink rose, broken in color tone in which the yellow tincture prevails.

Now, for the sake of accenting these peculiarities which I have just described let us compare with the Waban another type of rose color which is in strong contrast with it.

The Mme. Gabriel Luizet possesses nothing in common with the Waban in point of color tone, yet both are, generally speaking, pink roses. Look for one instant at the Luizet, its pink is cold beside the Waban, there is no glow in it. The characters of these two pinks differ as greatly, even to the eye of a superficial observer, as do the types of beauty with which we are familiar in the American and the Spanish lady. It is unnecessary to go into particulars and draw out comparisons, the difference is radical, it is complete. But a few of the distinctive features of color in the two roses we may perhaps consider with some profit.

The Luizet rose possesses a lovely pink which suggests to me a surface quality, with no softness but a great deal of refinement; there is an "all one" definiteness about it; there is no uncertainty at all. The Luizet seems to say, "I have an ideal pink in my mind, I produce it here

in my face and in my bosom, and I propose to stick to it." The Waban might say: "There are so many beautiful tones of pink I like that I don't know which I should prefer to wear, so I will deck myself in a little of all and arrange them in such a way that the world never dreamt of before." The Luizet arrays herself in a green, bluish in tone, but as uncompromisingly certain as her pink. The Waban contents herself with a green at once yellowish, but as variable and as artistic in tone quality as her pink is.

Now, what shall we call the pink of the Waban, and how shall we name that of the Luizet. Here there is a slight difficulty, because there is no absolute pink in nature which will serve as a standard like that which the zenith blue of the sky furnishes. I must go to my paint box, or to the prism, for my color standard. For the Luizet I should choose as a match my pink madder, but greatly diluted with white; from the prism I would choose that red which was nearest the crimson and farthest removed from the scarlet and say that *that* color diluted with white would produce the matching pink.

There is, then, no scarlet pink in the Luizet, but a pink near the crimson pink, greatly diluted with white. There *is* scarlet pink, pure pink and crimson pink in the composite pink of the Waban, but in this rose the pure pink has the ascendancy in daylight and scarlet pink (which is derived from the yellow light) in artificial light.

Under the conditions which I have described the Waban shows an aptitude for certain surroundings which will produce immense artistic effects in the hand of a skillful florist, but he should be careful, for perfectly apparent reasons, to keep the other beauty, the Luizet, away from it.

F. SCHUYLER MATHEWS.

Notes from the Bedding Trade.

Although the standard bedding plants remain unchanged year after year, we constantly find some valuable newcomers, and the energetic retailer naturally keeps his eyes open for any novelty in his line. Not that he can always go in for them at once, for a retail florist whose trade is largely local usually finds his largest trade in plants he can sell for a moderate price; he can often dispose of three plants at a quarter each sooner than one at fifty cents.

Without doubt one of the greatest things of recent introduction is the now well known strain of French cannas; no dealer in bedding stuff can afford to be without them. But the price still seems high to many small amateurs, and people who buy one year do not need to buy again the next, because the tubers increase like a hill of potatoes; when you have them one year you have them for all time. Still, they are some of the showiest plants we have, and will continue to sell in any place where there is much planting.

It is generally asserted by those in a position to judge that by another season the tuberous begonias will carry everything before them. They have proved a grand success in bedding, and the growth is so luxuriant, the coloring so brilliant that they make a grand hit everywhere. It would be difficult to find anything making a finer show outside, and any retailer would find it a paying speculation to plant a generous bed of them on his own place this year. Such an advertisement, though not so far-reaching as printers' ink, would prove effective with every one who sees it.

A decided novelty noted at Peter Henderson and Co.'s, is the Tom Thumb strain of single dahlias. The one great objection to the single dahlias has been their stalkiness, which has entirely disappeared in this class, for their natural height is only twelve to fifteen inches. The plant forms a compact little bush, flowering profusely, and the blooms are as large as on the ordinary plant. Another fine dahlia is the new Ami Barillet, with very rich dark foliage, bronzy purple in color. Speaking of dahlias, which always seem in favor with the public, Maid of Kent may be noted as one of the best striped ones—clear red and white, and although the stripes may vary, they never run out entirely to one color.

The coleus never loses its standing, being without doubt one of the best foliage bedding plants we have, and many of the old sorts are as popular as ever, in spite of their newer rivals. A great many growers now buy their coleus and other soft stuff in the form of rooted cuttings, as this enables them to get Easter stuff out of the way before starting with bedding plants. Among new coleus "Fire Crest" is a very good red, slightly marked with yellow; the leaves are deeply toothed and its habit seems very desirable. Ad other new variety is "Shelley's Yellow," which is most excellent in color and habit, and is said to be more vigorous than Golden Bedder. A thoroughly strong yellow coleus is highly desirable, for we are often disappointed in this respect.

Among climbing or trellis plants, which are always in demand, it would be hard to find anything to excel the old-fashioned Solanum jasminoides grandiflorum, which is now enjoying a new lease of favor. It flowers most abundantly both indoors and out, and its starry flowers are most attractive. It is well suited for growing against a wall.

For a basket plant nothing ever excels the ivy-leaved geraniums. Apart from their beauty they can be dried out cruelly without serious damage. Some very desirable new double varieties have clear pink or red flowers of large size, a decided improvement on the old sorts.

A good many people like the musk as a basket or window box plant, and there is a new variety with double flowers which is a great improvement over the old one. By the way, a most charming thing noted at Peter Henderson's was a variegated tropæolum, which is likely to be a great success in baskets or vases; it is not yet sent out in the trade. The leaves were a silvery green, bordered with clear white, a very dainty thing. It originated in England, and ought to command high favor for there is plenty of room for good running and climbing plants. One of our old stand-bys in that direction is Vinca major, especially the variegated form, which grows so luxuriantly that it is not only always handy for planting, but may be used at a pinch for decorating.

Among market plants some who grow exclusively for that class of trade find the very dark varieties of Phlox Drummondii sell well; they are sold in little clumps, four or five plants in a pot. The paler sorts are hardly so well liked, being more suggestive of the wild phlox.

This spring the new daisy Snow Flake has proved its popularity, being most admirable for early bedding. Daisies and pansies are always the first of our bedding plants, decorating places which must be filled with summer stuff later in the season, and there is usually a good deal of call for them in early cemetery work.

This season very few calceolarias have been noted; yet the dwarf yellow seems generally liked. It is sometimes said that it is rarely so well grown here as abroad, though some seasons a good many fine plants are to be seen.

It is worth noting that the fuchsia always retains a hold on the affections of so many amateur growers; big firms dealing largely in mail orders note this especially. Yet the fuchsia cannot really be called a success with us, particularly outside, for the hot summers dry it right up. However, as one large grower remarked, whenever the fuchsia does flower, the bloom is worth looking at; it is always well shaped and well colored, and the plant is attractive so long as it continues to exist, so people always admire it.

Blue flowers are singularly scarce among bedding plants, the standards in this class being lobelia and ageratum, but the old browallia will be found useful; its flowers are produced freely, and are a very distinct color. It is not very often seen, however.

The dwarf white ageratum is found generally satisfactory, being a good thing for edging.

We see a good many of the hardy garden pinks used now, proving a desirable thing in bedding. The newer strains are really fine, giving their best effect when planted in a mass. As they are found in striped, ringed and solid colors they give the opportunity for varied effects, and bloom so continuously that the bed is always attractive. A good many have been sold in the auctions, but it would be hard to find any plant not sold at auction now. These sales are a great convenience to many who have a large retail bedding trade, since their space is naturally taken up before Easter by flowering stuff. There is rarely sufficient room in such places to accomodate both classes of stuff, while the succession of plants can be managed very nicely.

EMILY LOUISE TAPLIN.

Miscellaneous Notes.

BY WM. FALCONER.

EASTER, A SUGGESTION.—Let me suggest the use of the white rock cress (Arabis albida) and the white moss pink (Phlox subulata alba) as flat, bordering or carpeting plants in Easter decorations. The rock cress was in bloom out of doors with us Easter Sunday, and the moss pink beginning to burst a few buds—now it is a sheet of snow. Both plants are hardy as a dandelion, of the easiest possible propagation and cultivation, the cress being multiplied by seed and the pink by division, slips or cuttings. Have one or two year old plants—mats—in a sunny cold frame (simply to hasten their blooming), and so as not to touch one another, and bring them into bloom for Easter. They might be grown in sunk pots or flats, or if planted out in the earth in the frame they might be lifted and put into pots or flats for the occasion, or lifted and the earth shaken partly away from them as we do in the case of selaginella, and use them for carpeting or bordering. They are dense, flat, and white as snow.

WALTER'S WHITE PHLOX.—Mr. Thomas Roberts, of Green Grove Springs, Florida, sends me a small box full of blossoms of this beautiful native plant. The flowers after a four days' journey by mail reached me in perfect condition, not a floret had drooped and they kept in good condition in water, after getting here, for four days

THE FLORAL CARNIVAL AT SANTA BARBARA, CAL.

more. Mr. Roberts writes: "It is quite hardy and blooms perpetually here, more profusely perhaps at this season than any other, unless cut back. Because of its snowy whiteness and its good keeping and shipping qualities I deem it worthy of introduction as a factor in cut flower work." The typical Phlox Walteri has bright purple flowers, but this variety which is occasionally found wild, has pure white flowers, on long slender stems. Wouldn't they come in handy hereabout at Easter?

MUSHROOMS in a hurry.—From spawning till bearing takes, according to my practice, six weeks. But I am getting old in years and ways and undoubtedly a laggard in practical fungology. A year or two ago a farmer in Pennsylvania took to raising mushrooms "in four weeks," but he was so secretive about showing how he did it (showing a man how and telling him how are not always equal information) that he wouldn't invite me to visit him after I asked him to. But revenge is sweet and now I've got it, for up starts a mushroom spawn in Washington that will grown mushrooms in "15 to 20 days!" This "Simplex" spawn from the Capital beats the Quaker just as much as the Quaker beats me.

MUSHROOMS AND STRAWBERRIES.—A gentleman from the brick regions of this state called to see me about mushrooms the other day. He has a large cellar, and last year went into the mushroom growing business for the money that is in it. He put in 700 square feet of bed surface and has cut 1,000 pounds of mushrooms from it. He sold his crop to dealers in New York at 80 cents a pound, and now, April, he is getting 90 cents. It was useless for him coming to me for advice, as his success (over 1½ pounds to the square foot) is greater than mine; I am content with 3-5 to ¾ of a pound. And now he has got strawberries on the brain. Five to six dollars a quart for these berries in midwinter has touched him in a tender spot, and he has visions of a Fragaria gold mine. But I shook my head. I didn't mention roses at a dollar a piece or flowers of any sort lest you might have to add a new name to your directory, I simply advised him to stick to his mushroom bonanza and let other things alone.

Floral Carnival at Santa Barbara, Cal.

We present in this issue a group of views of the recent floral carnival at Santa Barbara, Cal., from photographs kindly sent us by Mr. Joseph Sexton of that city. As will be seen from the views the display was unusually elaborate and must have required an enormous quantity of flowers.

Eel Worms in Roses.

Club roots, mentioned in my last, were fully described by Prof. Halsted in the FLORIST (page 660), and as he very justly remarks they will occupy our thoughts and energies for some time.

If any of your readers, finding club roots on their roses, will select some that are beginning to turn brown and with a sharp knife cut them open in transverse sections, put a drop of water on the same, slightly pressing the puply matter with a fine pointed instrument, then put the glass on which this should be done under a microscope with a magnifying power of from 200 to 300 diameters they will find plenty of small worms; if not the first time they certainly will after one or two trials. And by taking some of the freshly formed white looking tubercles and cutting them into thin slices, putting them on thin pieces of glass under the same power, the same kind of eel-like worms can be seen imbedded in the flesh-like looking material; in fact, it is their presence which causes it.

Prof. Halsted says there are from one to several hundred eggs deposited in each of these bulb-like little lumps. I have myself counted over 100 extracted from one, and that of course in rather a rough way of investigating, and, I doubt not, if I had the time to thoroughly test it very many more could be found. In some of the sample roots sent me I have found them much more abundant than in others; this may be as much due to the condition the roots are received in as anything.

But now comes the great point at issue, how to destroy this terrible pest. Some years ago I thought the ordinary rose bug (Aramagus Fullerii) the worst enemy the florist could possibly have to contend with, but they are insignificant compared with this. It behooves us to get into immediate training to wage a war of extermination against this, our common enemy, but I doubt not many will start by asking how to begin it. Well, I frankly confess I am as much in the dark as any one, for, though I have been trying experiments for some time, I have not yet arrived at anything definite in the matter. Mr. Halsted suggests cooking the soil for all who have been troubled with it; as chemicals appear to be out of the question, for the simple reason that the worm must be destroyed in the soil before using it at all, it can readily be seen that anything in the way of a drug to reach every particle of the soil would mean an enormous expense, and if cooking, or rather roasting the soil, has to be resorted to some of our inventive florists would confer a boon upon his fellows by getting up some kind of an apparatus that would simplify the matter. Where large quantities of compost have to be so treated it means a big job under any circumstances, and treating the soil alone will not answer the purpose as the pests are to be found in all kinds of decaying vegetable matter including manure, though its retailer's home—so far as present investigation to pl[illegible]ws—is in the roots of native his own place, etc.

tisement, thou[illegible] did not affect roses, but printers' ink, w[illegible]een troublesome to the every one who se[illegible]

roots of violets and many other cultivated plants. I saw a bed of violets myself completely ruined by it 20 years ago, and it has often struck me very forcibly that this club root has considerable to do with the present violet disease. But, to return to roses, it appears that to destroy the worm it is necessary to heat the soil at least up to 200 degrees Fahrenheit, hence my reason for suggesting an apparatus equal to the demands. No toy will answer the purpose, and to burn the compost simply means to destroy the bulk of its vegetative properties, rendering it practically useless without the addition of more manure. This is too serious a matter to be entertained.

Having received many communications relating to this subject I take this means of replying in full to them all, and hope that all who are interested will investigate the matter as fully as possible, not only as regards the animal itself but in all matters appertaining to it, as by that means something definite may be arrived at.

We are promised, and believe shall have, a very able paper on this subject at Washington next August, by one of the best informed men in the country, and it may help us very materially to solve this problem effectually if all who can will go there and take up the subject and thoroughly discuss it; meantime it would be a very great help to have the matter discussed thoroughly in this paper, as the more light we can get on it the better we can see to work.

Since writing the above I have noticed the item of "Root Knot on Begonias," where Mr. Robert Shore (page 626) says, "if there are nematodes in the soil you will see them jumping around." Mr. Shore must be blessed with a wonderful eyesight if he can see them without artificial assistance, for the simple reason that quite a number of people have tried to see them here through the strongest kind of a pocket lens that I can find, but no one has so far been able to detect the slightest sign of them until they are put under a microscope, and even when under a lens magnifying 300 times the largest will not appear more than half to three fourths of an inch long. Is not Mr. Shore mistaken in the matter? Possibly he has reference to some other insect which it is easy to suppose does the mischief, but in reality has no connection with the root galls whatever. His advice to give lime water is all right for any that may be in the soil, but for those in the galls it is simply useless, because if given strong enough to penetrate the roots it means killing the plants also. Better take his other advice—take the cuttings off, put them into clean soil and burn all the balance, including the pots they were growing in.

You will find such a list in our new trade directory and reference book.

Palms.

Lack of available space in many establishments prevents the repotting of the stock of palms until after the Easter business is concluded, and in some cases bedding plants also interfere to a greater or less extent, but whatever be the obstacle the time rolls around, and the fact remains that the less delay in this operation at this season the better it will be for the stock.

The usual trade species of palms are not very fastidious in the matter of soil, a moderately light and reasonably rich loam being all that is necessary for most of such species, providing that proper care be given to the drainage of the pots, and also some attention to the watering of the freshly potted subjects, in order to avoid souring the soil before the plants have a chance to root in it.

And wherever it may be necessary the plants should be thoroughly cleaned before repotting, so that the new growth will be perfect and free from insects. Syringing with some of the various insecticides is doubtless beneficial if the operation is done regularly, but if a plant becomes badly infested with one of the many troublesome varieties of scale it will take more than syringing to clean it, and a thorough dipping and sponging may be needed, after which the spraying with insecticide may prove sufficient for a considerable length of time.

Some differences of opinion exist as to the value of the many different bug and scale preparations now in the market, but one strong objection to most of them is their cost, and after testing a number of such preparations I have concluded that the most satisfactory in my experience has been a *weak* kerosene emulsion, this being a home-made remedy of very small cost.

The formula recommended is as follows: One pound whale oil soap boiled up in one gallon of water, and while the solution is boiling hot add three (3) gills of kerosene, the proper dose being half a pint of the above emulsion to one gallon of water, the solution to be made with warm water.

It will be readily seen that with whale oil soap at six cents a pound and kerosene at ten cents per gallon this will not be an expensive mixture, and it can be used for dipping, sponging or for syringing with little or no risk of injury to young foliage.

Of course some attention has been given to shading before this time or else the palms will have suffered, for while too much shading will make the foliage thin and tender, full exposure to the sun is also hurtful to most of the species when under glass.

The cheapest shading is whitewash, which may be applied in thin coats as required, but one great objection to this is the fact that the lime removes all paint from the woodwork of the house to which it is applied, and consequently has an unsightly effect, though it must be admitted that the wood so exposed appears to become so impregnated with the lime that decay is little if any faster than when properly painted.

Naptha and white lead makes a good shading for external application and does no harm to the paint, and an inside shading of tobacco cloth or some similar light material may also be used with good effect and is not very expensive.

At this time of the year a comparatively high temperature may be given to induce a more rapid growth, and should be accompanied with copious syringing on each bright day, but it should always

be remembered that in order to produce satisfactory stock for house decoration the plants should be gradually hardened off by lower temperature and free ventilation during the latter part of the summer, else many and loud will be the complaints from customers during the following winter of the tenderness and lack of vitality in their palms. W. H. TAPLIN.

Chrysanthemums.

BY EDWIN LONSDALE.

[*Read before the Florists' Club of Philadelphia.*]

When the word "Chrysanthemum" is mentioned our minds naturally revert to the "Queen of Autumn," although there are several distinct species belonging to this popular genus, conspicuous among which may be mentioned C. frutescens, the Marguerite or Paris daisy, and the ox-eyed daisy, (C. leucanthemum) of Great Britian, which is now spread very generally over many parts of America. The Paris daisy blooms most of the year, whereas the "white weed" of our fields, blooms the latter part of May, June and July.

Our "Autumn Queen" is known botanically as C. sinensis and is supposed to be a native of China, although it is not found in a wild state anywhere, nor is it recorded that it was ever found growing naturally wild.

It is not positively known even at what period the chrysanthemum first became the object of admiration in the far East, but according to Chinese chronology we may safely put it at about 2,300 years ago. The celebrated Chinese philosopher Confucius, who lived about that time, said in some of his writings: "The chrysanthemum has its yellow glory." In Japan it is of more recent introduction, but it can be traced back to 1186 A. D. in which year the swords of the reigning Mikado were decorated with figures of the flower.

The first European author to mention the chrysanthemum was Breynuis; this was in the year 1689. It was referred to as Matricaria Japonica maxima. In 1764 a small flowering species was found growing in a garden at Chelsea, now a part of London; this is the first recorded evidence of its presence in English gardens. Only twelve (12) sorts were known in England in 1820. Four years later the number was increased to twenty-seven (27).

In November, 1846, the Pennsylvania Horticultural Society held an exhibition when most of the plants shown were chrysanthemums. There were seven collections exhibited in competition: First premium for twelve named varieties was awarded to Benjamin Gullis, gardener for Jacob Snider Jr.; second to Archibald Henderson. Benjamin Gullis also received a premium for the best American seedling. So it will be seen that Philadelphia was growing and showing good chrysanthemums and raising seedlings nearly fifty years ago.

The first chrysanthemum show held during the present era was in 1883. The Florists' and Growers' Association of Philadelphia was in existence at that time. A special meeting was held Sept. 29 of that year for the purpose of considering the advisability of holding a chrysanthemum show. The opinion generally expressed, was, that it was not worth while making the attempt. But there was one among the number who clung to the idea that a chrysanthemum show could and should be held. This was Mr. Robert Kift who has been aptly called Philadelphia's Chrysanthemum Champion. He secured a promise from the principal growers and probable exhibitors of that time, that if the premiums would be guaranteed they would consider the matter of an exhibition favorably. The Pennsylvania Horticultural Society had very little faith in the idea. After much coaxing $100 was promised toward a premium fund by that society. A little later $100 more was added. After much well directed effort Mr. Kift succeeded in obtaining from that public-spirited firm, Wanamaker & Brown, a guarantee for the full amount of the premiums—about $400—with the understanding that the plants could be made use of, by them, to decorate their place of business after the close of the exhibition.

The great contest that year for the first premium was between John Stewart, gardener for George Bullock Esq., and Peter Vallandigham, gardener to Wistar Morris, Esq. The honors fell to Mr. Stewart. The judges had a difficult task before them. Mr. Stewart's plants were the most uniform in size and neatly trained, but Mr. Vallandigham's plants had the larger and finer flowers. The main hall was completely filled with various collections on that occasion, but, if my memory serves me correctly, Mr. Vallandigham's plants were the only ones on exhibition that had been what is known as *pot grown*. It was the general way of cultivating the chrysanthemums in those days to plant them in the open ground in spring, allow them to grow there all summer, and a few weeks before the exhibition opened they were lifted, and potted and trained into shape. This was one of the pioneer shows which was to start the whole country thinking about chrysanthemums.

In reference to this and to the New York show, Mr. John Thorpe said in the *Gardeners' Monthly* the following February, that, "The popularity of the chrysanthemum is of the most universal character, which will undoubtedly grow steadily and become permanent, so much so as to warrant my predicting, it will not be long ere we see every city, large and small, forming societies for the exhibiting of it all over America. There is no plant more showy, lasting, or beautiful."

It is a proud day for Mr. Thorpe to see his prediction so unquestionably fulfilled in so short a time.

In 1884 there was a marked improvement in the plants exhibited, and up to the present time it has been conceded that Philadelphia has the honor of exhibiting the best grown plants of chrysanthemums that have appeared in this country. It was in this year that John Shaw first made his appearance as an exhibitor. He was at that time gardener at the Friends' Asylum, Frankford, when he opened the eyes of all the growers and the public at large, as to the possibilities of the culture of the chrysanthemum. His deftly trained plants and fine flowers were the marvel of all beholders.

It was in 1885 that William K. Harris conceived the idea of getting up a premium worth trying for. He succeeded in getting six others besides himself to make a fund by contributing $20 each, making $140, to be divided thus: first premium, $100; second, $40. The contributors were W. K. Harris, David Ferguson & Sons, Craig & Bro., John M. Hughes, gardener to George W. Childs, Esq., Henry A. Dreer, Alfred Warne, gardener to Clarence H. Clark, Esq., and Walter W. Coles.

Only the two last named made an exhibit in that class. David Ferguson & Sons had some fair plants on exhibition on that occasion, but they were hopelessly out of the race for a premium. After securing the best available talent to act as judges, it was decided that W. W. Coles was entitled to the coveted first prize. Among the first prize collection were the then new varieties, only a short time before imported direct from Japan by H. Waterer. There were Gloriosum, (this being an early variety was just past its best); President Arthur and Syringa were both in excellent condition. Mrs. Charles Wheeler, W. K. Harris, Gorgeous, Duchess, Snowstorm, Moonlight, Fimbriatum, Mrs. William Mencke and Jessica. Many of them are unapproachable to-day in their respective classes. Jessica is one of the best early whites we have, and Gloriosum and Gorgeous are both early yellows, still in cultivation. Mr. Warne's Duchess and Mrs. Charles Wheeler, were the best in his group. The training of Mr. Warne's plants was very neat, but Mr. Coles' individual flowers were far superior in every way.

The collection of new varieties which was disseminated in the spring of 1884 proved to be the best lot that ever left Japan at one time. Most of them are especially adapted to the American climate, much more so than the so called Chinese varieties which were and still are so popular in England. These Chinese sorts were well nigh failures in this part of the country. Great difficulty was experienced in treating them so that they would retain the foliage until after the flowering period. The new collection referred to laid the foundation of what has been remarkable in the production of new varieties.

The best seedlings which have been raised here have either sprung directly from plants which were a part of that importation or indirectly in the second and succeeding generations. In addition to those named in Mr. Coles' winning collection there were Mrs. Frank Thomson (this is known as W. G. Grover in England), David Allan, Mrs. George W. Childs, Robert Bottomly (this is known in England as Lady Trevor Lawrence and Mrs. Beale). Mrs. George Bullock is claimed to be a synonym of Domination, but I can not understand why this should be, for Domination is described as *flesh colored pink*. Mrs. Bullock never assumed that color with us, excepting when the bloom first commences to unfold. It quickly assumes a pure white color and it is in the stage of a flower fully expanded that it should be described as to color. There is a mystery about this that I would very much like to see cleared up. The Mrs. Bullock was first exhibited under the name of Milkmaid. It was in the collection shown by Mrs. Bullock's gardener, Alexander Kerr, and it was through him I think that the name was changed from Milkmaid to Mrs. George Bullock.

Excuse this digression. To continue with the varieties which came over from Japan at the time mentioned. There were Golden Prince, Miss Meredith, H.

Waterer, Lord Byron, Bicolor, Hon. John Welsh, F. L. Harris, President Garfield, Minnie Miller, Delicatum, J. Collins and some others. Many of the varieties produced seed quite freely, so much so that seedlings are springing up in nearly every greenhouse in every corner of this great country. At first the seed saving was purely a haphazard business, but in these days more judgment is exercised and the probabilities are that the limit to the improvement has not yet been reached.

What we term the petals of the flower are generally spoken of as florets by experienced writers, especially is this the case in the old world. The everyday florists and gardeners can not bring themselves to call them florets, even if it is correct, but an effort has been made to establish the term petal-florets, as this seems to convey a more comprehensive idea. The reason they are called florets is because each petal is an individual which can perfect seed regardless of what is done in any of the other florets in the same flower. At the base of each petal will be found an ovule or seed in embryo. If the petals are clipped off close to the stigma it will be seen that the divided pistil necessary to the production of the seed is there complete. These are termed ray-florets, those in the center are disc-florets. The ray-florets bear the seed or are seed bearing florets, whereas the disc-florets furnish both the pollen florets and seed bearing florets.

Some years ago it was stated that it was impossible to effect a cross between two varieties. That notion is now exploded. It is a tedious operation it is true, but the man of patience can accomplish it if he is careful. In order to be quite sure that no other pollen grains than those the operator desires to be used reach the stigma of the proposed seed parent, it is safer to isolate the plant so that no foreign pollen grains which may be floating in the atmosphere may have an opportunity to frustrate our intentions. To facilitate the setting and ripening satisfactorily of the seed place the plant in a warm and comparatively dry atmosphere.

Select as a seed parent a good healthy grower. I have often thought the Mrs. Bullock would make an excellent variety from which to save seeds on account of its dwarf habit yet robust constitution. The petals should be clipped close to the stigmas, and with a pair of tweezers carefully remove the stamens, this should be done before the pollen cases are sufficiently ripe to burst, or all our time and trouble will go for naught.

The late Mr. Henry Bennett, of England, whose success in raising new and valuable roses is known far and wide, said in connection with the selection of the probable parents of new and improved varieties for commercial purposes, that we must pay particular attention to secure a high quality in the pollen parent. We are more likely to obtain better results from a moderate variety as a seed parent and a high class pollen parent than we are if the parentage is reversed. "Of course," he goes on to say, "the better the parents the better the results." That rule will hold good all through the vegetable kingdom, be it roses or chrysanthemums.

If the plant which is intended for seed bearing be isolated from all other varieties as recommended it will be better to have the flower of the variety which is to furnish the pollen conveniently near with the stem in a bottle or other vessel containing water, so that occasionally during the day it may be gently shaken over the flower head which has been prepared ready to receive the pollen. It is better to follow this plan, as all the little stigmas may not be in a receptive mood at the same time.

A paper bag or a piece of tissue paper should be kept over the flower operated upon so as to keep insects away, or to avoid the possibility of the air carrying pollen grains of some undesirable variety to the stigmas. By far, most of the seed saved is left to insects and chance and it is wonderful how many very superior varieties originate in this way. More well directed efforts should be expended in the production of earlier varieties for outdoor decoration; varieties that will flower before very severe weather sets in. Gloriosum ought to be one of the best for this purpose, as it can generally be depended upon to produce its golden blossoms early in October.

Violet Root Galls.

There are many diseases of the violet. The leaf-spot is due to a fungus, in fact there are no less than three kinds of fungi that cause the spot of the leaf of the violet. Without the microscope these fungi can not be distinguished, but to one who is familiar with them they may be known by the general appearance of the spots themselves. It is not to our purpose here to enter into any consideration of this subject.

VIOLET ROOT GALLS

There are other fungi that produce indefinite brown patches of the leaf and cause much damage. It is rare to find a violet plant affected with but a single kind of fungus and sometimes six or more may be met with upon a single leaf.

One of the serious pests of the violet is the eel-worm or nematodes. These are microscopic worms that multiply in the substance of the violet roots and cause enlargements called galls that may be very numerous and sometimes of considerable size.

The engraving is from a photograph of a violet plant that was dead and from all appearances fell a victim to the nematodes. The foliage was all dead and mostly gone while the roots were badly knotted and distorted from the presence of multitudes of the galls of the eel-worms.

These worms enter the tender roots from the soil and there increase rapidly. Their presence seems to poison the tissue and induces an abnormal growth similar to that which takes place upon many sorts of leaves when stung by gall flies and other insects. Many plants have their roots affected in this way and the same species of nematode probably inhabits scores of kinds of plants.

So far as known the gall trouble of the roses is the same as that of the violet and if this be true it follows that the infection may pass from one kind of plant to another. It would not be well to grow violets in soil where roses had been galled or *vice versa*.

There is no remedy for a plant that is badly infested, for nothing harmless to the plant can be used to kill the worms. The main point is to keep the nematodes out of the roots. The soil therefore should be free from them and this is a difficult matter. The soil could be heated to a high temperature and the worms would be killed. Freezing will accomplish the same end; but either of these two extremes is not always possible. Lime water is said to kill them. The less the manure used the better so far as the galls are concerned. Violets could probably be grown profitably with no manure. With the soil free from the worms and the plants also there ought to be no trouble in having violets exempt from the nematodes. In setting out plants it is well to look at the roots and reject all with galls.

Underground troubles are the least readily investigated but none the less fatal. If a plant looks pale and there is a drying of the edges of the leaf it is always well to look for mischief at the roots.

BYRON D. HALSTED.

Rutgers College, April 27, 1892.

Gardeners' and Florists' Club of Boston.

The members of the Gardeners' and Florists' Club with their friends, many ladies included, were present to the number of 250 or more at the May meeting of the club to listen to a lecture by Prof. Geo. L. Goodale, of Harvard College, upon "Noted gardens of the world." The lecture was illustrated by means of the stereopticon, the many views shown being selected from an extensive collection of photographs secured by Dr. Goodale while on a tour last year and shown now for the first time.

Colombo on the Island of Ceylon was the subject of the opening views. Here were seen beautiful avenues of ficuses, groups of musas and cocoanut palms, vast expanses of nelumbium and the famous cinnamon gardens. From Colombo a transition was made to the center of the island and the country which was the home of the old tyrant kings of Ceylon, where the scenes of tropical verdure were entrancing in the extreme. The entrance to the Garden of Peradenia was indescribably beautiful. Here were seen grand groups of arecas and cocoanut palms, avenues of Oreodoxa regia and Ficus elastica, the latter with giant buttressed and distorted trunks that would put into the shade our noblest elms and oaks. The lofty yet graceful clumps of bamboos were a genuine surprise and gave an idea of the tremendous growth of these magnificent plants.

After a peep at the rice fields the grand scenery in the highlands of Ceylon and the Experimental Gardens of Hak-galla the audience was in imagination carried across the sea to Victoria, Australia, where were shown magnificent forests of eucalyptus interspersed with noble tree ferns; thence to the Botanic Gardens at

Sydney and at Melbourne where some lovely views of luxuriant vegetation were displayed.

The lecturer incidentally remarked that there was some sort of a botanic garden in almost every town of consequence in Australia and that the inhabitants take great pride in them and regard them as the principal attraction to be shown to visitors from abroad. He also called attention to the extent of Australia, which is apt to be popularly underestimated, but really comprises 25,000 more square miles of territory than the United States exclusive of Alaska.

The next place visited was New Zealand and the Botanic Gardens at Auckland. Here, too, the views were superb. Splendid tree ferns such as dicksonias and alsophilas, towering fuchsias, tangles of climbers and twiners were among the most conspicuous features of the landscape.

Then came the Island of Java and the environments of the lovely city of Batavia. More cocoanut palms and Banyan trees with their interlacing trunks.

In the Botanic Garden of Buitenzorg, which the lecturer termed "a garden of rare delight," were great groves of the true sago palm, coffee trees and enormous specimen pandanuses. A curious feature was the great numbers of bats hanging from the branches of the trees and looking more like pendant fruit than anything else. The lecturer spoke in great praise of the generous management of this garden and the privileges there granted gratuitously to all who desired to study.

The Botanic Garden at Singapore was the last place visited and then followed an illustration of various tropical fruits, some of which are as yet unknown here.

Among the interesting notes made by the speaker was the peculiar fact that in Ceylon, whereas the arecas always grow perfectly straight and erect, the cocoanut palms are invariably crooked. In Java, however, the cocoanut palms are all straight. In the Garden of Peradenia the ravages of ants are so destructive that large blocks of earthen ware are used for labels. The weeds most troublesome in this garden are the common lantana and the sensitive plant, both of which it is next to impossible to keep down.

A vote of thanks was tendered to Dr. Goodale for his kindness and liberality in providing what was conceded to be the most entertaining occasion ever enjoyed by the club.

A short business meeting followed the lecture. Mr. P. Welch gave notice of proposed amendments to the constitution changing the date of the annual meeting, election of officers, etc. Lawrence Cotter, for the committee on supper, reported that after paying all expenses there was a surplus of $10 to turn into the treasury. A special committee was appointed to prepare and send a letter of condolence to Mr. Wm. Edgar, who was sadly afflicted by the sudden death of his wife, and a committee was also delegated to represent the club at the funeral. Among the visitors present were Mr. Geo. C. Watson, of Philadelphia, and Mr. Winfried Rolker, of New York.

Boston.

The street fakir question has been uppermost this week. The retail florists have been making warfare on them, with the result that none of them have been able to secure licenses, and for the past few days the streets have been practically clear of them. Occasionally one sees a venturesome one who is taking his chances, or who is courting arrest for the purpose of testing his rights in the matter. And test it they will, for the fakirs have a strong organization and enough money and they will not let the thing go by default. Their strongest allies too are found among the growers. If it were not for the street fakirs many of our largest growers would find a big deficit when they come to foot up their month's business, especially at this season of the year. Boston is peculiarly situated in this respect. The gulf between the growers and the retailers is wider here than in other large cities for several reasons. The strongest reason is probably the fact that nearly all of the large retailers have greenhouses of more or less extent themselves. Naturally their own stock is used up first before they will call upon any grower to supply them with anything. This lack of support on the part of the store florists has always been the cause of much discontent and lack of harmony on the part of the growers who have been forced to find other outlets for their stock. Thus the street fakirs have come to be of great service to the growers and they have flourished. The amount of flowers handled by them on a bright day is very large, and since they have been shut off the street, stock has accumulated on the hands of some of the growers to an extent that has caused mutterings deep and significant. A peculiar fact is apparent also which will greatly weaken the argument frequently made by the store florists that the street men were ruining their trade. The wholesale men and the growers alike assert that there has been not the slightest increase in their sales to the stores, and the flowers that would have been marketed through the street men simply remain rotting on their hands.

Two young men employed in florists' stores have recently suffered considerably from the results of wounds in the hands by rose thorns. It is said that one of them is in danger of losing his arm. One physician attributes the trouble to poisoning by hellebore or some similar substance used on the plants. If this is so the question of liability becomes a serious one.

The cut flower trade is very quiet for this season of the year. Roses are rather overstocked, Mermets especially. White carnations are scarce and sell at sight.

Spring work at the Arnold Arboretum has been seriously hindered on account of a strike by the men employed there who demand less hours and more pay.

Magnolia stellata or Halliana is in bloom. The flowers are double white and as shapely and fragrant as a pond lily.

The Epimediums, alpinum rubrum and macranthum, with their pretty little pink flowers are very attractive and deserve to be better known. Mr. Dawson says they force easily.

Among the handsome prunuses now in flower are Mirobolana, white, tomentosa in several forms, both white and pink, Miqueliana, soft pink, and pendula, rosy pink, the latter forming a picture of unsurpassed beauty at this season of the year.

In the beds at the Bussey Institution are to be found a great variety of spring flowering bulbs. Among the tulips sylvestris major makes an especially pretty show. Irises, pumila, deep purple, and Persian pale blue are very attractive and one of the prettiest flowering bulbs is Puschkinia libanotica compacta; color beautiful blue.

New York.

The most notable event of the past week was the Actor's Fund Fair at Madison Square Garden, which was generously aided by the Florists' Club. The flower booth, which owed its effectiveness to the labors of the gentlemen of this body, was 75 feet long, curving to the outline of the amphitheater. The formality of the pillars in front was relieved by plants, among them nepenthes and dendrobes in baskets. The back was a bank of azaleas, palms, lilies, ferns, hydrangeas and other flowering and decorative plants. Some distance out in front of the booth was a tall May-pole, banked at the foot with a mass of azaleas and hydrangeas. From the top of the May-pole a quantity of laurel garlands extended, radiating over the booth, while a flight of doves appeared to have settled on the garlands, above the fair saleswomen. A white satin banner hung in the center, bearing in gold letters the inscription "Wishing you success. New York Florists' Club." The flowers on sale were sufficient both in quantity and quality to give the booth the appearance of a miniature show. The trade generally deserves much commendation for their readiness to assist the Thespians.

Retail florists, growers, wholesale men, all pulled together and the names of those who generously responded to the circular sent out by the club with choice flowers and plants would make a long list. Every afternoon and evening during the week many prominent members of the club gave their time and assistance in the booth arranging flowers, making boutonnieres and in various ways helping the score of pretty young ladies who presided. Whether the latter were the prime attraction or whether the laudable desire to assist a worthy charity was uppermost we shall not attempt to say, but it was probably a combination of the two. The saleswomen seemed to have it their own way with the vast throngs of people who came their way and some phenomenal sales were made, an occasional exchange of a boutonniere for a $5 bill or a sale of one American Beauty by another American beauty for a $20 bill being a frequent occurrence.

The original committee of the club, Messrs. Siebrecht, Hafner and Burns, worked with a will every evening. Mr. Plumb acted as cashier, and Mr. Dihm also gave the most of his time for the entire week. The manner in which the affair was carried through will be a feather in the cap for the New York Florists' Club and can not fail to result in lasting benefit to the trade generally. Manager Palmer is so much pleased with the affair that he has expressed his willingness to devote a special performance at his theater next season to the New York Florists' Club.

Hydrangeas are still very plentiful, being seen in quantity everywhere. The great stock of lilies which flooded the market this spring has caused a good deal of discussion among growers, some of them are in favor of trying to regulate the supply, but that seems practically impossible. The thing may adjust itself in time, like the smaller bulb stuff, which during the past winter seemed just about right in quantity. There is one thing, however, which needs an emphatic denouncement, and that is the attempt on the part of Bermuda growers to sell flowers as well as bulbs; if they try it again those over-wily growers are likely to find that they have been sawing off the limb they are trying to sit on.

Concerns that will solicit trade for their

bulbs from the growers here and will afterwards, when these bulbs are in bloom, do their best to destroy the prospects for the sale of the flowers from the bulbs by advertising and shipping their own outdoor grown blooms to retail customers here at ruinous prices, deserve to be systematically boycotted. Only one thing has hitherto stood in the way of the accomplishment of their greedy designs, and that is the miserable condition in which their stuff arrives.

The cut flower trade has been in a very bad condition during the past week.

Roses are a drug and it is an impossibility to realize a satisfactory figure on them. Large quantities have been sold as low as $5 per 1000, and $10 per 1000 is considered a good sale. One consolation is that this is no different from the experience at a similar time in past seasons, and in fact it has often been even worse. The new rose Bridesmaid is coming in to Burns & Raynor in very handsome shape just now, and W. P. Wight's Wattevilles are superb. Valley is in some cases very fine. This extra quality is frame grown and sells readily at $4 per 100. There are still a few violets hanging on. Harrisii lilies are dead stock and can not be sold at any price. Smilax is also getting plentiful again. Carnations not very plenty but going slowly with the exception of the white ones. There is an abundance of sweet peas in the market. Outdoor lilac from south of here is extremely plentiful everywhere and very cheap.

One of the oddities noted in a florist's window was a well flowered lot of the bottle-brush tree (Metrosideros speciosa) with its strange red flowers, which are so suggestive of the implement which gives it its common name. It is grown by Victor Dorval, a Long Island florist.

Some very quaint and charming rose baskets are designed by Thorley; they are of silver, in shape like a lace handkerchief drawn up at the corners in pleats so as to make a square basket.

One of the big silversmiths shows among his fern baskets some in the shape of a high heeled slipper of repousse silver, filled with small adiantums and pteris.

There is very little work just now in the way of decorations. Recent work in this line has shown a tendency to greater simplicity in design, most modern houses being so ornate that over adornment of flowers gives a confused effect. There is rather less decoration on the walls but a larger use of flowers in vases.

The auction sales of spring stock the past week were very good; the plants were excellent and sold well. Many amateurs buy at these sales, among them a fair sprinkling of women, but as the plants seem to bring as good a price at auction as in the nurseries they do not economize particularly by it. However, they are happy, and so is the trade. Both Young and Elliott had exceptionally good stuff last week and crowded salesrooms. At the former place were some very fine fuchsias from the Essex Heights Floral Co.; there were also some bougainvilleas from P. B. Meissner; its showy pink bracts are to be seen now in some of the florists' windows. At Elliott's among the geraniums was a fine lot of Souvenir de Mirande from J. Nicol; this is a very handsome new single variety, the flower being blush white in the eye, shading to deep pink at the outer edges, very much like a Cusin rose.

Mr. Dimmock has recently received a number of dried flowers of the old Cattleya labiata which are remarkable for their richness of color. Some are deep dark rose, and extra good varieties will evidently be found among the plants now being imported.

Alex McConnell is chairman and Wm. I. Brower secretary of a committee of florists which has been organized to take some part in the work of collecting funds for the Grant Monument Association.

Geo. Stumpp has leased for a term of five years the land and greenhouses lately occupied by John Finn at Second avenue.

R. B. Young has increased his plant auction establishment by the addition of the adjoining four story building, his old quarters being too small for the big spring business.

Mr. Will Currie, of Milwaukee, sailed per steamer State of California for Europe where he expects to make a long sojourn.

The subject for discussion at the May meeting of the Florists' Club was "Park embellishment, its character and use," on which an able paper was read by John R. Johnson, of Paterson city parks.

Philadelphia.

For the first time this season flowers have been a drug, particularly roses; it has been very hard to dispose of them at any price. When business is dull flowers accumulate very fast and it seems to make no difference how cheap they are the storekeeper will not buy more than he thinks he can sell.

The fakirs are reaping the benefit, however, and are doing a rushing business. One of them who has a doorway on 8th street about Chestnut in the center of the shopping district was doing a rushing business one day last week. People were almost climbing over one another to get his roses, which he was offering at ten cents a dozen. They were Perles, Gontiers and a few small La France. If he made a profit and the grower got anything it can't cost much to grow roses nowadays.

The most that is asked for Brides, La France, Mermets and Albanys is 6, Perles and other small roses 4, and they are sold away below these figures. Carnations sell for 1½, with good demand for white and pink, valley is 5, and most other bulbous stuff out of the market.

The men who make a specialty of bedding plants are now very busy. Griffen Bros., of Frankford, have an immense stock of verbenas, some 40,000 having been on the benches. A great many are grown in 4-inch pots and these are the best selling plants they have. They make a very showy plant grown in this way.

Several houses of roses, with which they have had great success all season, are still in fine condition and full of flowers. The houses are 10 feet wide with two rows of steam pipes around but the plants have done as well if not better than in other houses with middle benches. La France, Albany and Papa Gontier are their principal roses.

They top dress with sheep manure at this season when they can give plenty of air, but think it a little too strong for winter when the houses are closed up.

We noticed at Edwin Lonsdale's in the manure water barrel an arrangement of wire about one third the diameter of the barrel extending to the bottom, which could be lifted out; this contained the manure and left the water free to use when lifted out. This should be an improvement over the old method.

The last meeting of the Florists' Club was not very large in point of attendance, the rural members being now very much occupied with their spring business have not the time to attend. Two papers were to have been read, but both the essayists had been so busy with Easter and other business they could not get their essays ready, but promised to have them for the next meeting. K.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. C. VAN LINDLEY, Pomona, N. C., president; W. J PETERS, Troy, O., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY Franklin Grove, Ill., treasurer. The seventeenth annual meeting at Atlanta, Ga., June 1 to 3, 1892.

The Atlanta Convention.

The program for the seventeenth annual meeting of the American Association of Nurserymen at Atlanta, Ga., June 1 to 3, has been issued by Secretary Green.

The convention will assemble in the hall of the House of Representatives in the State Capitol and will be welcomed in addresses by Hon. G. W. Northen, Governor of Georgia; Hon. W. A. Hemphill, Mayor of Atlanta; Hon. S. D. Bradwell, on behalf of the Georgia State Agricultural Society; Hon. R. T. Nesbitt, Commissioner of Agriculture, and Prof. J. B. Hunnicutt, of the University of Georgia.

Then will follow President Van Lindley's address, the reports of Secretary Green and Treasurer Whitney, and of special committees, after which miscellaneous business will be disposed of.

A list of the subjects to be discussed and the names of the essayists and speakers follows:

American species of plums and their prospective development. Prof. T. V. Munson, Denison, Texas.

Interstate shipment of nursery stock with reference to the California monopoly. Col. U. B. Pearsall, Fort Scott, Kan.

Duty of American nurserymen at the World's Fair. Hon. N. H. Albaugh, Tadmor, O.

Fruit tree packages. G. J. Carpenter, Fairbury, Neb.

Grading and assorting nursery stock. W. F. Heikes, Huntsville, Ala.

One way of preparing a nursery catalogue. J. Horace McFarland, Harrisburg, Pa.

How to manage employees. Geo. S. Josselyn, Fredonia, N. Y.

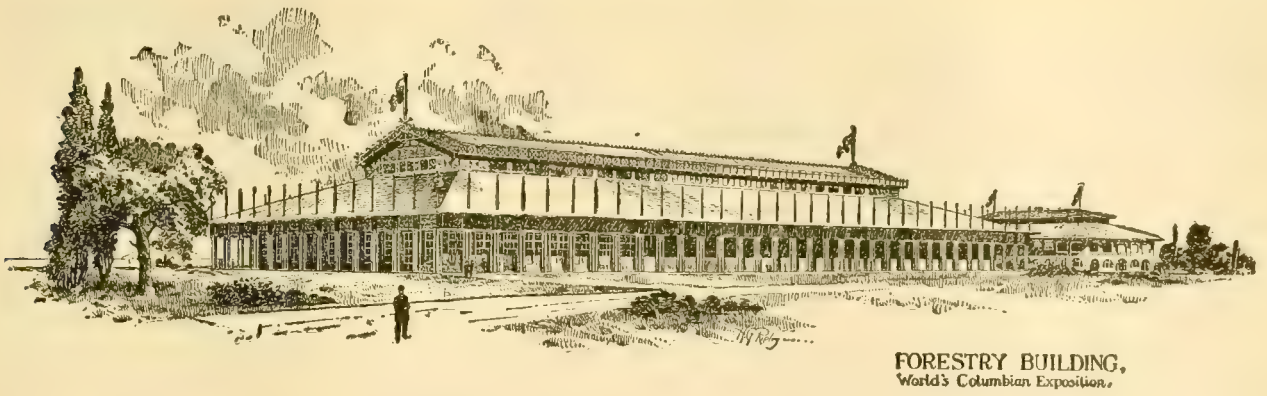
Advertising or agents—which? E. W. Reid, Bridgeport, O.

Iowa as a fruit state. D. A. Porterfield, Traer, Ia.

Peach and plum culture in the Pennsylvania mountains, without spraying. W. M. Benninger, Walnutport, Pa.

Who makes the most money—nurserymen or fruit growers. J. H. Hale, South Glastonbury, Conn.

Future work for this Association. Hon. S. M. Emery, Lake City, Minn.



How to lose money in the nursery business. S. D. Willard, Geneva, N. Y.

Suggestions to nurserymen. P. J. Berckmans, Augusta, Ga.

In addition to the above solids there will be addresses in a lighter vein, Mr. J. Jenkins, Winona, O., being down for a speech on "The funniest man I ever met," and Mr. W. L. Glessner for one on "How to eat other people's water melons."

The headquarters will be at the Kimball House, at which reduced rates have been secured. Space for the usual trade exhibition has been secured in the hotel.

The Trunk Line Passenger Association has granted a rate of a fare and one-third on the certificate plan. The fare from Rochester, N. Y., to Atlanta and return

THE FORESTRY BUILDING AT THE WORLD'S FAIR.

will be $30.50. From New York and return, by boat, $32. It is probable that a special buffet car will be chartered, to leave Rochester at 8:30 p. m. Sunday, May 29, leaving Washington at 11:10 a. m. or 11 p. m. the next day and arriving at Atlanta at 4 o'clock the day before the meeting convenes. Those who can are invited to join the Rochester party. The trip from Chattanooga to Atlanta is directly over the route that General Sherman fought over, including the battle grounds of Dalton, Chicamauga, Resaca, Rocky Face Ridge, Allatoona, Kenesaw Mountain, Chattahooche, and a number of lesser battles, and is every inch historic ground.

Neither Michigan nor New England railroads have made reduced rates, but any member can secure a certificate for low rates on arrival at New York, Washington, Buffalo, Cleveland, Chicago, etc.

During the convention the Association will enjoy an excursion from Atlanta to Fort Valley, which will take the members 103 miles through the state and give them an idea of its resources and a view of some of the largest peach orchards in America.

Copies of the program may be had on application to Secretary Chas. A. Green, Rochester, N. Y., who will also supply any further information desired by those expecting to attend the convention. Correspondence relating to exhibits should be addressed to the chairman of the exhibition committee, Mr. A. R. Whitney, Franklin Grove, Ill.

Long Island Tree and Shrub Notes.

BY WM. FALCONER.

THE APPLE TREE TENT CATERPILLAR (Clisiocampa Americana) is exceedingly numerous this year. The webs became prominent early in April and more so and more numerous as the month advanced. With us it has confined itself strictly to rosaceous plants, and although it is reputed to enjoy willow, white oak, poplar and witch hazel, it has not, so far, interfered with these in our case. The plants in these grounds most infested by it are Japan quince, ornamental apple trees as Pyrus Parkmanni, P. floribunda, the double flowering Chinese apples, cherry trees of all sorts, but especially wild and ornamental kinds, and seedlings, and the genus Prunus generally. Orchard apple trees are less troubled than ornamental kinds, and pear trees are ignored by it. We read that it doesn't thrive on the peach tree, but this is not so in our orchard. And to display its botanical knowledge, as it were, it has visited a big bush of Photinia serrulata that we had boxed up out of doors during the winter; I've taken three nests off of it. I haven't found any on our rose bushes. In bright mild weather the caterpillars issue forth to appease their hunger with the early unfolding buds, but in inclement weather and at night they return to their homes in their tents. As soon as we see the tents we strip them off, at the same time carefully getting all the caterpillars and destroy them.

A LITTLE KNOWLEDGE OF BOTANY will help even a nurseryman. Take this tent caterpillar case, for instance. If the pest confines itself to rosaceous plants, and you know what the cultivated plants that belong to this order are, you needn't go searching all over your walnuts, birches, maples and lilacs for the pest, but restrict your labor to the plants belonging to the rose order, and so too you can instruct your workmen.

THE EFFECT OF THE PAST WINTER on trees and shrubs.—Generally speaking it has been severe. Up till the first of March however, plants looked well, but in April many things showed decided injury. Evergreens in any way exposed to the biting northwest winds got hurt considerably and nothing more so than the common hemlock. The green leaved English yew suffered but the variegated forms or golden yews didn't; the Dovestone yew where exposed got badly cut, where sheltered it has escaped, and the Canada yew in exposed places also got hurt. The Japanese cuspidata is our hardiest yew. Retinospora pisifera and its varieties suffered considerably and more so than any of the other kinds. Abies magnifica gets browned a little every winter and again in summer, but it got browned more this winter than ever before. The American holly in the teeth of the wind was defoliated, but on the sheltered side it retained its leaves. European or Japanese hollies are not hardy with us. Here on Long Island we are troubled by ice storms in winter, that is sleet storms when the sleet or rain freezes on the branches of the trees so thick that they often break beneath the weight of ice, then a wind arises and rattles the branches against each other to their great injury. The multitude of twiglets found under Norway spruces in winter have been broken off by these ice storms. Last winter we didn't have an ice storm at all, and the result is that Cedrus Deodara, Pinus excelsa and some others that used to suffer considerably in winter have emerged from last one in better condition than I have known them to for several years. Of course we shelter the deodara on the north side but not overhead.

A GOOD MANY deciduous shrubs, notably spiræas, got cut back considerably, but this was owing partly to immature growth last fall. And our raspberry bushes, which we do not bury, have been killed back more than I ever knew them to be before. Blackberries pulled through all right.

Forestry Building at the World's Fair.

The Forestry Building is in appearance the most unique of all the Exposition structures. Its dimensions are 200 feet by 500 feet. To a remarkable degree its architecture is of the rustic order. On all four sides of the building is a veranda, supporting the roof of which is a colonnade consisting of a series of columns composed of three tree-trunks each 25 feet in length, one of them from 16 to 20 inches in diameter and the others smaller. All of these trunks are left in their natural state, with bark undisturbed. They are contributed by the different States and Territories of the Union and by foreign countries, each furnishing specimens of its most charateristic trees. The sides of the building are constructed of slabs with the bark removed. The window frames are treated in the same rustic manner as is the rest of the building. The main entrances are elaborately finished in different kinds of wood, the material and workmanship being contributed by several prominent lumber associations. The roof is thatched with tan and other barks. The visitor can make no mistake as to the kinds of tree-trunks which form the colonnade, for he will see upon each a tablet upon which is inscribed the common and scientific name, the State or country from which the trunk was contributed, and other pertinent information, such as the approximate quantity of such timber in the region whence it came. Surmounting the cornice of the veranda and extending all around the building are numerous flagstaffs bearing the colors, coats of arms, etc., of the nations and States represented in the exhibits inside.

POMONA, CAL.—A local nursery has sold 200,000 olive trees this season.

A CALIFORNIA horticulturist is the man who has discovered the cause. He says that the reason that George Washington cut down the cherry tree was, it was infested and he couldn't bear to palm it off on the old man.

DO YOU WANT a list of the leading cemetery superintendents? You will find such a list in our new trade directory and reference book.

Chicago.

The project of an International chrysanthemum show in the Horticultural Building at the World's Fair next November has at last been abandoned. The rate of progress through the interminable red tape was so discouragingly slow and the time was growing so short that it was deemed the wisest course to waste no further effort on it. The Hort. Society of Chicago will at once issue a premium list for an exhibition of its own next November.

Business has been quiet during the past week. Roses are not as plenty as they were the first part of the week, still there are more than enough for the demand. The quality is not of the best, much of the stock being badly mildewed. Outdoor daffodils, narcissus and tulips are coming in and the first named are very fine; the tulips are short stemmed.

Albert Fuchs has rented a store in the new Masonic Temple and expects to open within a few days.

The Madison Street Floral Co. is the title on a new sign at 44 East Madison street. John C. Bruckner, the late wholesaler, is the alleged proprietor.

During Mr. O. P. Bassett's stay in California he met at San Jose the great and only Neal that some Chicagoans remember to their sorrow. Neal informed Mr. B. that he was travelling for an eastern house, but did not say in what line.

John E. Bohan will build greenhouses at either Hinsdale or River Forest and will grow novelties in cut flowers for the Chicago market.

M. A. Hunt, of Terre Haute, is sending in some good outdoor valley.

W. W. Barnard & Co. have leased a building with four floors and basement at 186 East Kinzie street, to be used for the storage of seeds and bulbs, to relieve their stores in the Sibley warehouse which they still retain.

Among recent visitors to the city, were Mr. and Mrs. R. J. Mendenhall, of Minneapolis.

Mention the AMERICAN FLORIST when writing advertisers on this page.

CANNAS.

ADMIRAL COURBET $2.50 per doz

A variety that is not nearly so well known as it deserves to be. The flowers are nearest to pure yellow of the "Crozy" Cannas. They are beautifully spotted with scarlet.

EMILE LECLERC, yellow, spotted orange, 60c per doz.; $4.00 per 100.

PRESIDENT FAIVRE the very best old variety having dark leaves—flowers are crimson, $1.50 per doz.; $10.00 per 100.

PREMICES DE NICE, is the most effective yellow for beds and massing, $1.00 per doz.; $6 00 per 100; $50.00 per 1000.

Don't delay ordering any longer than you can possibly help.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

Chester County Carnation Society.

The regular monthly meeting was held May 7 at the W. C. T. U. rooms, Oxford, Pa., most of the members being present. The president and secretary were however both absent on account of sickness in their respective families.

Mr. Passmore gave a cordial address of welcome, responded to by Mr. Styer and Chairman Swayne.

Mr. Phillips, referring to the destruction of the red spider, knew of one grower using a tablespoonful of salt to 3 gallons of water with marked success. And speaking of the present practice in the propagation and growth of carnations, he thought there was something the matter with our treatment; we did not obtain as vigorous growth, perhaps due to practice in propagating. In looking over lots of cuttings, some very small and crowded when moved to earth, still kept crowded and cramped in growth, all cells for growth must be diminished in size and strength. Another lot was given room in pots on a border with the result of strong vigorous growth. These two cases illustrated the speaker's views on the subject.

Mr. Renard thought that if more room must be given on cutting bench, a higher price must be received for cuttings. Wm. Swayne said, "We must either grow fewer at higher prices or grow like grass and sell as grass." Mr. Skelton spoke of the experiments of the late C. T. Starr with early propagation and plants shifted to large pots and kept growing, the result not being as satisfactory as with stock propagated in March.

Considerable discussion followed on the resting of plants during their growth. Instances were given of young stock rested during March and April in cold frames and producing extra large crops of flowers. Wm Swayne thought the main cause of failure to have abundance of bloom late, and loss of vitality in old plants, arises from heavy stripping of cuttings. Growers who do not propagate for the trade can have an abundance of bloom and luxuriant growth throughout the entire season.

A fine display of seedling carnations was made by various members. Lawrence Thompson showed a pink seedling, a cross of Grace Wilder with Chester Pride. Edward Swayne showed No. 3, a light pink of Daybreak type. Mr. Skelton showed three seedlings and a fine deep pink sport of Grace Wilder. C. J. Pennock showed several, one white, a cross between Portia and Lamborn, of fine form, white, slightly tinted with rosy pink; a scarlet, full, on long stiff stem, a cross between Grace Wilder and Portia; and one monstrosity four inches across resembling a peony. E. B. Jennings sent Orange Blossom and Mayflower; both carried well, the former showing particularly well.

Edward Swayne favored the meeting with a humorous selection from "The Two Runaways."

A vote of thanks was extended the Oxford members for their hospitality. C. J.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a young florist of 6 years' experience; 21 years of age; in or near Chicago preferred. Good recommendations. Address FLORIST, care American Florist, Chicago.

WANTED.

VERBENA AND PANSY PLANTS in bloom. Send prices to WISCONSIN FLOWER EXCHANGE, Box 87, Milwaukee, Wis.

FOR SALE—Greenhouse Fixtures.

91 Windows several uniform sizes; 18 windows odd sizes; all painted and in good condition; containing about 2,400 feet 8x10 glass. Also water heater and about 850 feet iron pipe with connections and valves. Must be sold to close out business. A splendid opening for a good greenhouse commanding extensive sales of cut flowers and designs. The above fixtures will be sold cheap—at a single sale or in parcels to suit purchasers. For further information, apply to H. FEUND, Executor of Fred Scheibel, dec'd, Madison, Wis.

FOR SALE.

Nine greenhouses containing about 16,000 feet of glass, 15 cent double glass; all houses rebuilt 4 years ago; heated by hot water use city water for watering 2 acres of land, 1 brick dwelling house with 8 rooms, 1 frame house of 4 rooms, stable, horse, harness, wagon, etc. The above property is located in one of the best commercial cities of the west, with a population of over 60,000, and within 1¼ miles of city hall; electric cars pass every 6 minutes direct to city hall and Union depot. The greenhouses are well advertised and enjoy a good patronage at home and from abroad, and now contain a good stock of cut flowers, decorative and bedding plants. Poor health causes owner to retire from business. Would also be willing to sell greenhouses and stock and lease grounds and one dwelling house for a number of years, with privilege to purchase at a fixed price when lease expires. A bargain to a man with small capital. Address BUSINESS, care American Florist, Chicago.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

Philadelphia.

At high noon on Saturday, April 30, Miss Blanche Simons, daughter of Mrs. Peter B. Simons, of San Francisco, was united in marriage to Mr. W. Atlee Burpee in the West Spruce Street Presbyterian Church. A large crowd filled the church, fifteen hundred invitations having been issued for the ceremony. The floral decorations were the most elaborate and unique ever seen within a church edifice for a wedding. Every window was a mass of white lilies and other tall blooming plants. The galleries were draped beautifully with heavy green garlands. The pillars were trimmed with quantities of Easter lilies, while the railing around the pulpit was covered with smilax, studded with Bride roses. A profusion of pink roses covered the posts at either end. Back of the desk a mass of white Easter lilies and pink hydrangeas were banked up fully twenty feet from the floor, and the base extending across the platform was filled in with fine greens and roses. The bridal procession was headed by six ushers: Mr. William H. Earl, Mr. Warner Harper, Mr. Eldridge Brown, Mr. Charles Junkin, Dr. William Drysdale and Mr. Charles Lee. Best man, Mr. A. Scott.

The six bridesmaids were Miss Drysdale, Miss Helen Burpee, Miss Tucker, of Troy, N. Y.; Miss Mary Ashmead, Miss Sheaff and Miss Reed.

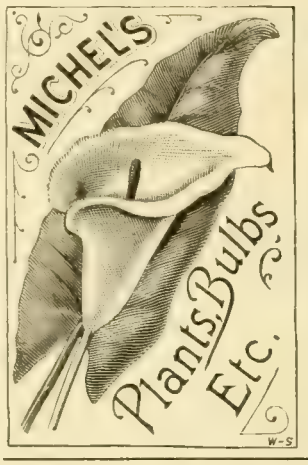
The bride looked extremely well. Her dress was rich white silk entirely covered with soft white chiffon. Her veil was of tulle, falling in graceful folds to the end of the train. Her flowers were Bride roses. Rev. Duffield Ashmead, the bride's uncle, came in with her and gave her away.

A very small breakfast followed the ceremony for the intimate families at 1724 Chestnut street, the home of the bride, after which Mr. and Mrs. Burpee left for New York. They sailed on May 7 on the Werra for a three months' trip abroad. On their return their home will be at 1332 Arch street.

The wedding gifts to the bride were very numerous and costly, amounting to several hundred articles in silver, gold, ivory, onyx and rare bric-a-brac.

ECHOES.

It is reported that the marriage of the best man, Alexander Scott, is not far off. But the most astonishing news is that gay Mr. Eldridge Brown will soon join the band as well! Who would have thought it!



Mr. Henry Maule certainly cut a dashing figure in his Prince Albert.

Owing to the stormy weather on Friday several New York guests did not arrive.

The Postage on Seeds for Canada.

Postmaster Van Cott has been advised by the Postoffice Department that, by the terms of the postal convention between the United States and Canada, the rate of postage on seeds, plants, cuttings, roots and scions is one cent for each ounce or fraction thereof. Hitherto they have been permitted to pass at half the above rate—one cent for each two ounces. The postage must be prepaid in full on packages containing those articles, or they will not be forwarded.—*N. Y. Tribune, May 5.*

NEW YORK.—The seedsmen all report sales as up to the average of previous years. Robt. George, Painesville, O., M. S. Willard, of Comstock, Ferre & Co., Wethersfield, Conn., and Jas. Currie, Milwaukee, Wis., are visitors in town this week.

" 6-inch pots	11.00
" 8-inch pots	15.00
" strong clumps from bed, not divided	25.00

Chrysanthemums. We have a large stock of the select varieties that are most desirable for the commercial florist. Give us a list of what you want in Chrysanths and let us make you a price on it.

Cut Flowers.

For the balance of this month we offer

ROSES—Brides and Mermets	3.00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this. Stock guaranteed A1. No charge for packing.

Vases in Iron, Rustic, etc., best makes, will sell for a song to close out. Window Boxes, we still have a quantity left if you want any this is the chance of a lifetime. Price 1c. per lineal inch in length.

ADIANTUM CAPILLUS VENERIS—

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. Price, strong plants, $8.00 per 100.

JOS. E. BONSALL & SON, Salem, O.

Baltimore.

The weather has killed trade this week. Two or three days of heat that was harder to bear than midsummer, two drenching rains, followed by wind and preceded by all pervading clouds of dust made it up, and the little good weather had to be utilized by the ladies to do their spring shopping.

Such a glut of flowers has not been for some time, particularly of roses. Everybody had enough, and the growers from the county and Annapolis and our neighbor Philadelphia, too—for she sends a man over weekly to help us out in the rose line—were all sufferers.

The Exchange was piled up with really good stuff, for which no reasonable offer was refused and the only thing in the market that seemed to be able to "get a move on it" was valley, which for a while was rather scarce, but the quantity of other stuff made even that go slow at last.

Baltimore may get left on base ball, but she "gets there with both feet" when it is a question of bowling. Ask the brethren from Washington if it isn't true. Ask them, too, while about it, if getting left by the last train was the only way they experienced that pleasant sensation last week. Cock-a-doodle-do-o-o. Three cheers and a tiger for Bauer and Wiedey.

Mr. Chas. Wagner had a very fine chrysanthemum bloom with him when last in town, one of the newer varieties, and says he has no difficulty in getting them at this season. Fancy having another chrysanthemum season at Easter! Would it not be an improvement on hydrangeas and lilies? MACK.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

APPLE GERANIUM PLANTS.

We have a large stock of young plants of Apple Geranium in 1 and 2-inch pots. They can be had for the next three weeks at $8.00 per 100. Address

BROTHERS' INDUSTRIAL GARDENS,
MOBILE ALA.

Toronto.

After all spring is two weeks behind time this year and even yet the weather has not altogether lost the winter chill, though with the exception of an odd night or two we do not have actual frost. The chestnut tree buds are all ready to burst into leaf as soon as the clerk of the weather turns on the warm tap.

Do other cities have any difficulty in getting a competent judge for their chrysanthemum show? The shows all over the country being held at about the same time makes it almost imperative for people to stay at home at that time, and as it is generally considered desirable to have a judge from another place there seems to be a dead-lock. Last year our association appointed 15 local men as judges and this under the circumstances filled the bill pretty satisfactorily, but it is a very cumbersome plan and difficult to carry out properly and I believe nearly all the members are in favor of the single judge and point system, but the question is where to get the judge. How would it do for the executive committee of the S. A. F. to appoint judges for the different states and provinces or for certain districts?

A prominent gardener in this city in the course of conversation the other day put the following question: Why does not some one advocate the formation of a grand North American horticultural society with sections for florists, gardeners, nurserymen, seedsmen, carnationists, rosierists, etc., somewhat after the plan of the National Education Association? I asked him why he did not do it himself. "Well," he replied, "if I had not seen in the FLORIST lately how satisfied the S. A. F. was with matters as they stand I would, and besides I guess I am too 'small potatoes' to make them alter their course." I told him I did not think so, but that the present time was the best time to formulate some such scheme, as the World's Fair was giving every one big ideas. "Well," he said, "you mention it in your notes and if I don't do anything perhaps some one else will." Now here is a chance for a man to have his name emblazoned in the pages of history for future generations to talk about. E.

PHOENIX NURSERY COMPANY

Successors to SIDNEY TUTTLE & CO., BLOOMINGTON, ILL.

Always mention the American Florist when writing to advertisers.

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of "Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100.

PRICE OF STAR OF 1891. $45.00 per 100.

Colored plates of Madame Crozy mailed free. Can be supplied in any quantity.
Trade lists on application. Address

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON, NEW YORK.

Pittsburgh.

The trustees having in charge the erection of the Schenley Park Greenhouses presented by Henry Phipps, Jr., of Pittsburgh, have received a number of plans and bids from prominent builders for the erection of the houses. The most notable are those by Mr. Silsbee, the architect of the Lincoln Park Greenhouses, at Chicago, Lord & Burnham and Thos. W. Weathered's Sons.

Mr. Silsbee's plan contemplates a palm house 208x68 and adjoining houses for show purposes.

Lord & Burnham's plan shows a frontage of 400 feet, comprising a palm house 133x60, four show houses each 104x30, fern house and aquatic house each 100x35, orchid show house and Victoria regia house each 50x60. The front is of stone, turretted, and contains offices, etc.

Weathered's plan shows 460 feet front. It provides for a center palm house 150x60 and 59 feet high. Four show houses 106x25 each, fern house and aquatic house each 108x35. Victoria regia and show orchid house each 50x50. In this plan the main building is castle-like, of stone, and contains offices, work rooms, etc. The Pittsburgh papers pronounce it to be the most graceful of all the proposed structures.

The bids run from $90,000 to $118,000 and the work is supposed to be completed by Jan. 1, 1893. Whichever bidder is successful it is certain that the structure will be the handsomest of its kind in the country.

"Genista Pubescens."

ED. AM. FLORIST:—We send you a spray of Genista pubescens, this being the third crop of flowers produced by the same plants since January. We predict a great future for this, either as a pot plant or for cut flower work. JOHN IRVINE.

Bay City, Mich.

[The spray was well filled with flowers and was certainly very pretty.—ED.]

The World's Fair.

As a result of Chief Samuels' southern trip a car load of ornamental plants is on the way from Mr. R. Dale, of the Ponce de Leon Hotel, St. Augustine, Fla. The lot includes some fine specimen palms, and other trees and shrubs, and a lot of bulbs of pancratiums, caladiums and crinums, in all about 900 plants.

Among plants recently received were 200 Yucca filamentosa var. from F. W. Kelsey, New York; 2000 climbing roses from the Dingee & Conard Co., West Grove, Pa.; a carload of choice specimen evergreens from Robt. Douglas & Sons, Waukegan, Ill.; specimens of Picea Nordmanniana from Samuel C. Moon, Morrisville, Pa.; 200 clematis in sorts, 100 Hydrangea pan. grand., 25 magnolias in sorts, 100 Viburnum plicatum, 25 new clematis and 300 dwarf roses in sorts from the Boskoop Nursery Association, C. H. Joosten, agent, New York.

W. M. Samuels & Co., Clinton, Ky., are sending this week a very fine specimen of Agave Americana var., 35 years old, several fine palms and cycads, Arundo donax var., pawlonias, hibiscus, loniceras, magnolias and other trees and shrubs.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

Tendencies of Retail Trade.

It is well known among retailers that every locality has its own peculiarities in the plant trade; an article constantly demanded in one place may be scarcely salable in another. This does not apply to those plants which may be regarded as the staff of life to the bedding trade—geraniums, coleus, verbenas, and so on—but is specially true of less common things. The dealer must consider his market; the class of customers influences the class of plants.

In suburban districts, where people are building homes and laying out grounds there is a decided increase in the use of ornamental trees and shrubs, and also for plants to be used in permanent situations. Naturally such plants call for a good deal of space on the part of the dealer, but it will be found necessary in many places, where the dealer is expected to be both nurseryman and florist.

The FLORIST has mentioned a good many shrubs lately which are especially useful in this trade, preference usually being given to early flowering sorts. Exochorda grandiflora, which is not yet common, appears to be much admired; at time of writing it is making a beautiful show with us, with its quantities of anemone-like flowers. Hardy rhododendrons, too, we find in demand, and there is a steady appreciation of the Japanese maples. All these fine decorative shrubs appear to be largely called for year by year as people become more educated in the line of landscape art, and they are also required in good cemetery work.

Among salable plants which are not extensively grown may be mentioned the pelargoniums—Lady Washington geraniums, as the amateurs usually call them. They make extremely showy pot plants, and will be found very desirable in places where there are many foreigners. English and German buyers seem particularly fond of them, and few greenhouse plants are calculated to make a more brilliant show than well-grown pelargoniums.

It is generally conceded that the rose is the most popular of all flowers, and most retailers find that the plants are always in request, the taste for hardy bedding roses increasing yearly. Many amateurs like the tea roses as house plants, too, though they are rarely a genuine success under such conditions. Moss and climbing roses are often called for in this class of trade, hardiness always being a prime requisite. One of the new outdoor roses which is declared a grand success is Summer Queen; its color is very similar to Mrs. Jno. Laing, and it is a most prolific bloomer. The color proves very attractive, those delicate pinks being always popular, and its hardiness adds to its value. A good many of the older roses of the hybrid remontant type are always in request in the bedding trade, especially where people are making permanent borders; they still hold their own in competition with the newer sorts. No matter how many newer crimsons are brought out there is always a demand for Jacqueminot and its allies; the virtue of the Jacq rose has become a proverb.

It is noticeable that the carnation grows much in public favor among small buyers. The popularity of the flower itself is phenomenal while the number of carnation fanciers who buy a few plants of each variety is certainly on the increase. One prominent wholesale grower says the amateur buyers are rather an exasperation; they send for his trade list, and then send for a hundred plants running through the entire list—three of one variety, three of another, half a dozen of a third and so on. Of course the buyer expects to get them at wholesale rates, when he should properly send his order to a retailer.

Probably the popular taste for carnations is increased by the improvement in varieties, to say nothing of the encouragement given such taste by the Carnation Society. However, the retailer who wishes to sell pot plants must naturally go in for an assortment of varieties, giving as wide a range of colors as possible. In the long run preference may be given to self colors rather than blotched or striped sorts, but a good many ladies admire the striped carnations, especially when the colors are clear and distinct, as for example, American Flag. So large a proportion of the amateur buyers is composed of women that the long-headed retailer takes their fancies into account. Good pink carnations take well with this class of trade; Mrs. L. Fawcett is a very attractive one, the color being, in milliner's phrase, real shrimp pink. Nellie Lewis is very taking—pink striped with carmine, while Daybreak is a most attractive pink. Among deeper sorts J. R. Freeman may be commended for its rich ruby crimson. Of course in selling these carnations as pot plants the foliage must be well cared for; dead leaves or slovenly habit spoil the appearance entirely. As in the case of much other soft-wooded stuff, the retailers usually strike but few carnations themselves, preferring to buy them in the form of rooted cuttings, a plan by which they economize both space and labor. In this respect, as in many others, the trade has changed greatly within a short time.

In a miscellaneous collection there is usually a demand for good plants of the succulents; they are cheap and attractive, many being particularly useful in vases and baskets. Mesembryanthemum spectabile is a good basket plant, the thick leaves having a drooping habit, while the large magenta flowers, suggestive of an aster, are very showy. The little variegated mesembryanthemum commonly known as the Ice Plant is an-

other attractive one, and several of the crassulas will also be found valuable. The echeverias and sempervivums are necessary in a locality where there is a taste for carpet bedding, and they make a useful class for borders. In the east it seems as if succulents are less used than they were some years ago, partly, perhaps, because there is less carpet bedding.

It is a question with many of the smaller dealers how far they may indulge in plants of the hardy herbaceous section. It is a prevalent opinion that there is but little money in such things; still it appears a growing demand, like that for shrubs. Some of the herbaceous stuff seems absolutely needed where there is park or cemetery trade, and it does a good deal to brighten the spring gardens, like the early bulbs. Without dipping very deeply into such trade there is little doubt that many will find it an advantage to keep some herbaceous stock.

A thing noted this spring, which gives promise of popularity, is a mixed strain of pyrethrums; the flowers run through a variety of shades, white, pink, crimson and yellow, and the plant soon throws up a number of flowering stems, which give it a handsome appearance in the pot. Seems likely to prove salable around Decoration Day—it is perfectly hardy. Some of the white pyrethrums have proved very useful in bedding. Another handy thing to have is a really good strain of petunias. There is no excuse for growing poor ones, for there are many excellent strains, especially the double fringed sorts and they are rarely neglected in the retail trade.

In most towns of any size, especially in the manufacturing districts, there is a large trade among flower peddlers; they buy of the local dealers and reach a class of customers the stores or greenhouses do not touch. They are not restricted to cheaper plants by any means, and it is surprising to note the quantity of stuff they sell. After Easter their wagons are gay with hydrangeas and other flowering stuff, and their trade continues until the bedding season is over.

EMILY LOUISE TAPLIN.

Society of American Florists.

Reports from all directions indicate that the attendance at Washington next August will be very large. The number of ladies attending this convention will be the largest on record. Full arrangements have been made through the Trunk Line Committee for the usual reduced rate of fare, i. e.—one fare and a third on the certificate plan for all members traveling over the roads represented in that Committee, and it is expected that the other passenger committees will co-operate and grant a similar concession.

It is not too early for the clubs and other organizations in various parts of the country to agitate the question of route, number intending to go, and other matters, which when attended to in time and by the right parties, are so conducive to personal comfort and social enjoyment on the trip.

Neither is it too early to forward to Secretary Stewart the usual annual membership dues of $3. Do it now while you think of it and then it is off your mind. And if your dues for last year are still owing remember that a remittance of $6 will be necessary to entitle you to the privileges of membership at the Washington meeting, as arrearages must in all cases be paid.

The Convention Souvenir which the Washington brethren are having prepared, a copy of which will be presented to every member of the S. A. F., is a handsomely bound volume of over 200 pages. It contains a map of the city and 46 engravings of prominent buildings and other interesting features, besides a set of 24 fine photographic views; 46 pages are devoted to a description of the capitol, its different apartments and the paintings and sculpture which adorn it; the President's House, State, Treasury, Navy, War and other departments take up 28 pages; and much space is given to full and interesting descriptions of the reservations, monuments, squares, cemeteries, hotels, places of amusement, schools and public works, as well as the intensely interesting suburbs Georgetown, Alexandria, Arlington and Mt. Vernon. The Washington members are deserving of great credit for the completeness and beauty of the work, and are to be congratulated on the readiness with which their offer of a few pages for advertising purposes was accepted by the trade. There is still a little advertising space left for late comers.

De Ideal.

[An essay delivered before the Blacktown Florist Club by Prof. Chalkline.]

Wh' wha' dat 'mark I heahs in de reah seat? Wha' dat you says? "Dis kyarnation in de peach blow vauze on de rostrum hab not been registahed." Das all right. Dat p'tic'lar variety am not to be foun' on de books ob de Kyarnation S'ciety, but I tells you now it am in de minds ob de membahs ob dat 'sociation an' doan' you done fergot it. Keep in you' min' de fac' dat some wery fine results hab been obtained in dis yere worl' widout habin' gone frough de formiality ob registration. Registration am de propah capah, ob course, but it doan' prove nuffin'. You got to see de plant summahed an' wintahed befo' you know if he any use to you, an' it am de wise man dat take a hoss on trial a few weeks befo' he done swap he good dollahs for de nag.

But de gemmen ob de Club will pahdon dis digresssion.

I desiah to make a few 'marks to you dis chenin' on "De Ideal." Dar am many kin's ob ideals. We's all a'workin' for sumfin'. We may not get 'zac'ly what we's stribin' for, but we stan' a good chance ob makin' some progress in dat d'rection if we puts our min's on de subjec' an' humps for it.

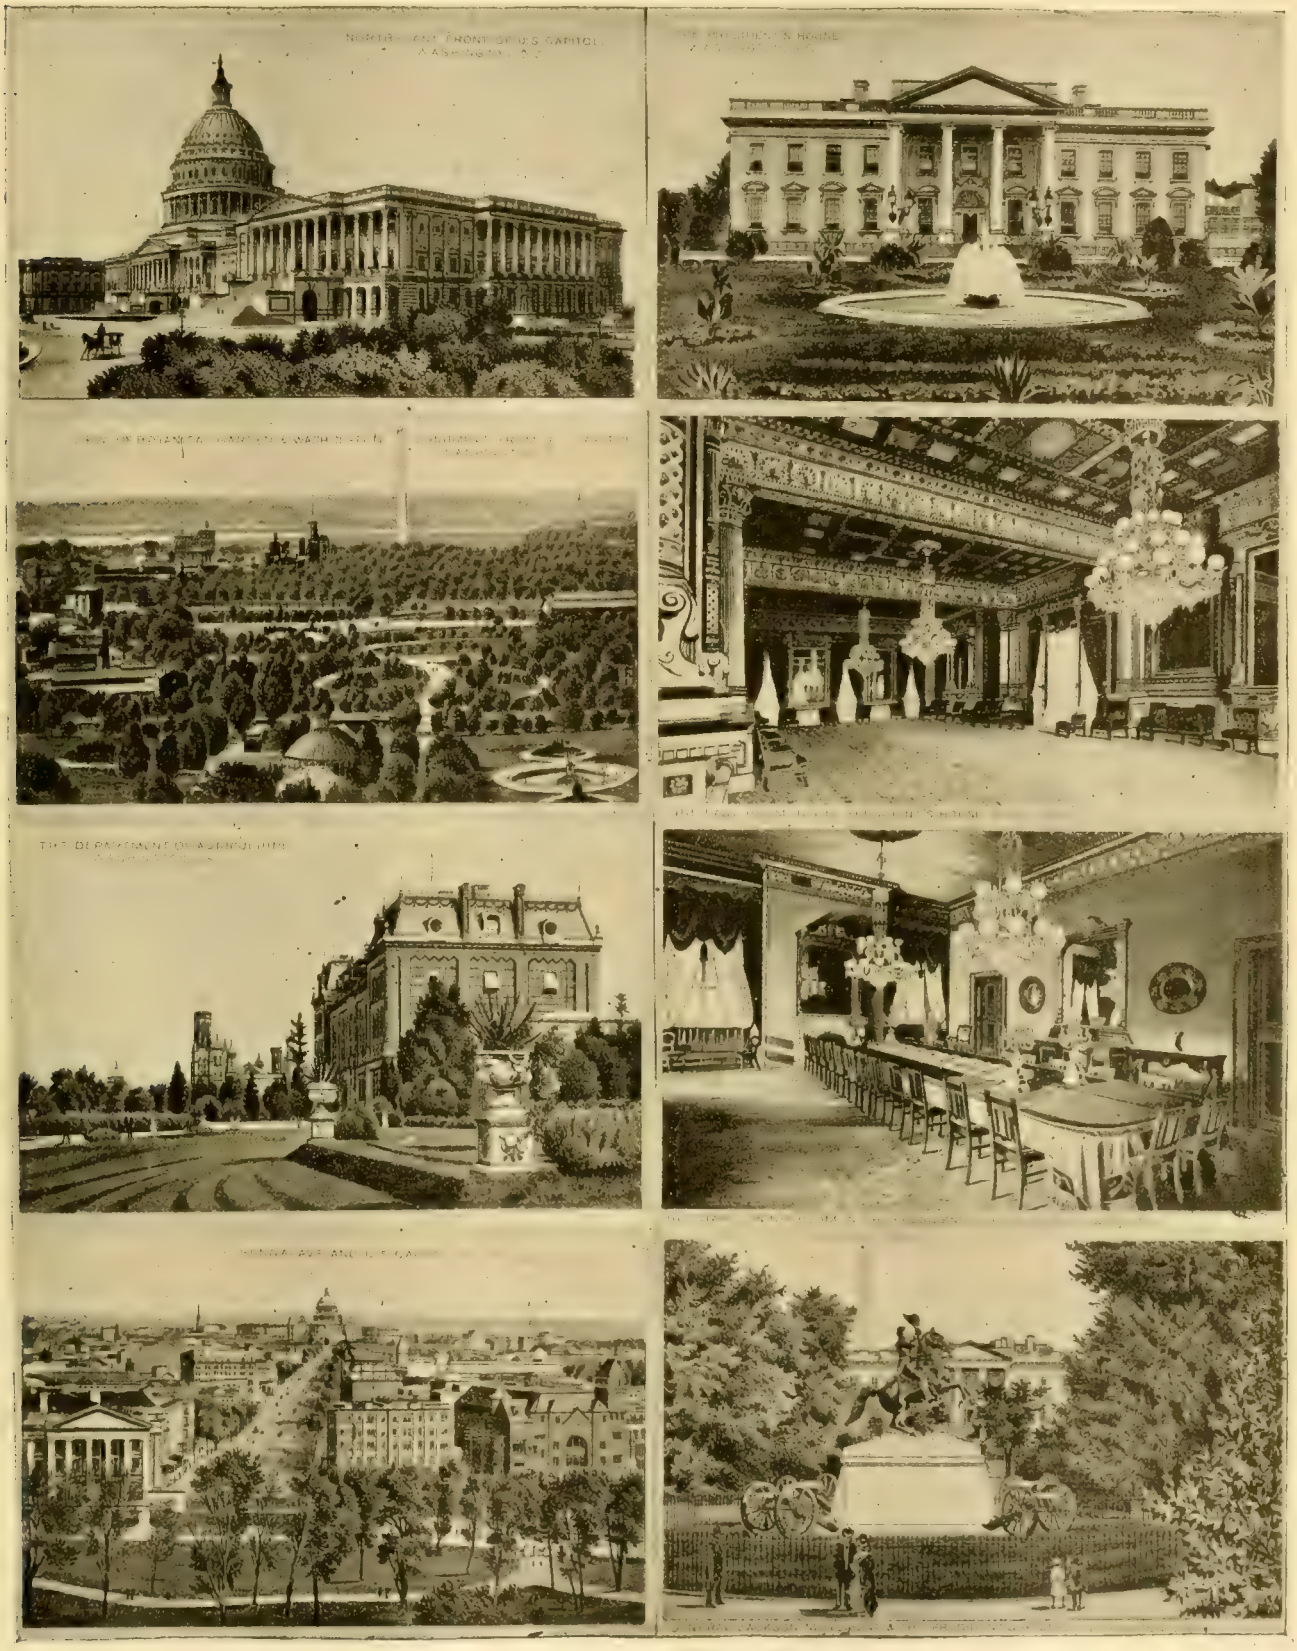
Now, dar's Brer Lonsdale. Nice man, dat. An' he am monkeyin' wif' de kyarnation. Wh' wha's he a'doin'? Wha's he a'doin'? I asks, "Hab he an ideal?" You can 'pend on it he jes' hab, but he am too modes' to 'clare it. But you jes keep you' eye on 'im. He know whar he wants to get an' doan' you be 'sprised when he does.

Dat am de right kin' ob a man. But dar am 'nudder kin' ob a man dat I allus has my doubts 'bout. De moke what sud'nly come out wif a nice new rose, or a kyarnation dat am wery fine, an' he call 'um a seedlin' what he hab de distinguish' honah ob raisin'. But he nebbah been known to hab any seedlin's befo' an' if you prowls roun' his place you doan' see none ob dese yere seed beds nor nuffin' ob dat kin' layin' roun' loose, an' what am mo' strange he nebbah am heared from again in de same line ob seedlin's.

Sometimes a man think he hab done reached de ideal dat he hab been earnes'ly strivin' for, an' hab him securely fenced in, but like's not he aftahward fin' dat he am badly fooled, an' dat his ideal am way off in de dim horizon. Dat young colt what he registah wif so much display an' hab so much to say 'bout his pedigree, turn out to be a heap wus trotter dan his reputed faddah was. You know de man whose great ideal it am to be 'knowledged as de great an' only 'sessful violet growah. He done hit it las' yeah, an' prehaps he hit it 'gain dis yeah, an' dat make him too previous, an' he done think he know it all, an' he done strut roun' an' prehaps he condescend to gib kin'ly 'struction to his po' benighted neighbahs 'bout it. It am mo' dan likely dat same man will be comin' to you nex' wintah wif a long tale ob woe, an' wif he chin hangin' down like he mos' trip ober it, to ask you' kin' advice 'bout de bes' way to get rid ob dis yere dreffal violet disease.

An' doan' you be too proud wif him, an' go to showin' off you' foolish conceit. It am bettah to be modes', so dat he doan' come back an' get de laugh on you, for you doan' know for suah but dat you'self may be de nex' victim.

Dis yere am a mighty risky business for a man to do much braggin' in.



Dere's de man what done come to de Floris' Club an' always keep his jaws a'waggin' on every subjec' dat come up, an' he like to show dat he am a master han' at debatin'? His ideal am to be known as de great parliamentarian, an' if registration in dis line was 'lowable, dat man would mos' likely registah heself as "D. Webster de secon', las' but not leas'." But in de end de only result ob his ambition am dat he make heself a unmitigated nuisance. I doan" say dat he am in dis aujience but dar am few Floris' Clubs where he am not.

Dar am scherial ideals dat hab not as yet come to pass. Dar's de blue chrystiantum, an' dars de golden yellow tea rose, an' dar's de blue rose. But Brer May he say dat we done hab too many blue roses now, an' a look frough de diff'rent greenhouses will show dat he am mo' dan half right. Den dar's de ideal Floris' Club, whar de membahs doan' hab no quarrels an' doan' call no names. Dis yere ideal dey am mos' likely to reach fust in Canada.

Befo' closin' dis meetin' I desiahs to say dat I understan' dat some unfav'able critiacism was made 'bout some ob ma remarks regardin' de C'misyun Man at de las' meetin' ob de club. Ef de outraged pahty am in de aujience on dis 'casion I takes de opportunity to tole him dat it am well known dat wholesome troofs doan' always 'gree wif de stummick.

De membahs will please not leab dar sents till aftah de hat hab gone de roun's, an' in de meantime we will all sing de hymn,

"Oh, you'll know when you git dar."

WASHINGTON VIEWS.

Washington Views.

The next annual convention of the Society of American Florists will be held in Washington in August, and as a foretaste of the sights to be seen at the National Capital we present in this issue a number of views of public buildings and grounds that will we believe be of general interest to our readers.

YOU MAY not care a copper for the directory list proper in our new trade directory and reference book, but you really do need the reference book part, whether you do a wholesale business or not.

Miscellaneous Notes.

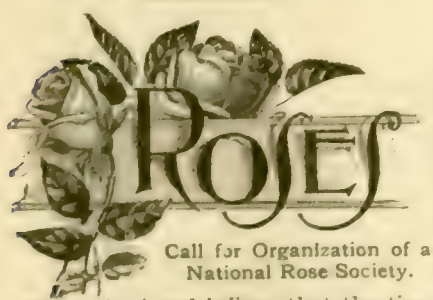
The Mexican primrose [What is the plant you refer to as "Mexican Primrose?"—ED.] germinates from seed as easily as the English daisy, it also grows readily from cuttings, rooting in a few days; it is free flowering, color of bloom rose

pink and each bloom lasting about three days. It is a good plant for hanging baskets and garden boxes.

Cannas Alphonse Bouvier, Mme. Crozy and Star of '91 would I think make excellent parents for an improved race of the dwarf strain of cannas which has surely come to stay. If we could only get a canna of the free blooming dwarf habit of Star of '91 with large flowers of a rich deep velvety scarlet we should indeed have a treasure. At any rate we will expect great results from careful selection, cross fertilization and the survival of the fittest. [These cannas are already the parents of a numerous progeny. Have you succeeded in successfully cross fertilizing the canna?—ED.]

What is the difference between the Washington rose and the Mary Washington rose? The descriptions are the same while the prices are different. [Please be more specific.—ED.]

The Helleborus niger (Christmas Rose) is worthy of a prominent place in a garden of hardy herbaceous plants. It has wintered outdoors without protection for the past eight years with me and blooms all winter. It should be planted in the spring in deep rich soil where the sun does not shine upon it when frozen, although my plants get the sun all day. [Has been referred to frequently in the FLORIST. While it may be hardy enough, the florist to get the best use of its blossoms must grow it in winter indoors or in a frame —ED.]



The Blanche Ferry sweet pea is worth more to me than all other sweet peas for cut flowers. It is free flowering and dwarf and has large blossoms and fine fragrance. But there is a poor, dull colored, striped, scentless variety mixed with the pure pink that should be exterminated.

I predict that every flower lover who visits the World's Fair next year will return home so full of new ideas that '94 will be a year of unprecedented activity to the florists.

Why not try forcing the Dinsmore rose in place of the Am. Beauty? It is so much stronger grower and freer bloomer, and it looks very much the same. [Handled as you suggest do you find the Dinsmore a more profitable rose than the Am. Beauty?—ED.]

EVELYN ARNOLD.

Grand Rapids, Mich.

Call for Organization of a National Rose Society.

The undersigned believe that the time has arrived for the organization of a national rose society, the desire for such a society being general and wide spread.

The rose, both in its intrinsic and commercial importance, leads every other class of plants grown. The immense sums of money annually spent on rose-buds have led to the erection of millions of feet of glass upon the North American continent solely for the production of rose bloom.

There is not a florist but what is interested in the rose, be his establishment large or small, for it is a flower which is absolutely necessary to the prosecution of his business. Methods of culture are now pretty generally understood throughout the trade, and the demand for a first-class article is now fully realized.

The American flower buyer is quick to admire and appreciate new and improved varieties, and there is a national taste displayed in the choice of roses which is quite individual and pronounced and who, better than the American rose grower, can produce new types and forms that shall, in a measure at least, fill the national requirement.

It shall be the aim of this new society to help on the good work of originating new American varieties of roses suited to the American market. Most of the roses of American origin are "sports," as they are designated, from the finest bud varieties, Bride, Waban, the Queen, Sunset, White Perle, and several others, all grand roses, but not produced by the skill of the American rose grower. Souv. de Wootton and a very few others, less notable, are our sole American seedlings. This should be remedied.

The purpose of this organization shall be:

First: To stimulate and encourage the raising of new varieties of roses in America, by the offering of prizes and by other recognition on the part of the society.

Second: To establish and encourage rose exhibitions throughout the country and, as soon as practicable, to hold a national rose show or exhibition each recurring year.

Third: To establish a proper and intelligent method of classification and to authoritatively weed out of our lists worthless and undesirable varieties.

Fourth: To give better opportunity for rosarians to become acquainted and to discuss methods and the varied matters of interest pertaining to the growth and the finest development of the rose.

All in favor of forming a society with such objects as outlined above will please send their names promptly to M. A. Hunt, Terre Haute, Ind.

A meeting for organization and selection of officers will be announced during the meeting of the Society of American Florists at Washington next August.

New York.

At the present time the trade is in a state of utter deadness, so far as cut flowers are concerned. There is absolutely nothing doing though a few unimportant decorations have taken place within the past week. Flowers are plentiful, outdoor stuff is coming in and prices are "anything you can get." The only people who seem to enjoy business are the fakirs.

If the flower trade is poor, those who do jobbing about the city find their harvest in the bedding trade. It is confidently asserted that it has never been better than this season; in fact, no previous season seems to approach it in the volume of trade. All sorts of bedding stock is in active demand, and the prevailing taste lies in the direction of good plants. A quantity of extraordinary fine calceolarias are to be seen, many coming from Flatbush growers, who make a great success with many of the spring flowering things.

Dards had a very showy display of the calceolarias at his store.

A noticeable thing in Stumpp's store was a mass of the dark Pæonies (tenuifolia) which gives the most brilliant color to be seen in these flowers.

A noticeable display at Siebrecht & Wadley's during the past week was a large importation of bay trees, just received direct from Italy. They formed a regular grove around the store, attracting attention from everyone who came along the avenue. They have been received with considerable favor; in fact, they seem to be a regular craze with the best class of buyers, being used largely on lawns. They are grown in tubs, and are very shapely. They travel admirably, coming off the long voyage as if packed but yesterday, and are excellent for use in halls and other cool or draughty situations. A large number of these trees will make their appearance in the fashionable summer resorts this season, and they can never be considered common, because the time and care required to bring them into perfection will prevent them from being as low priced as many other decorative plants.

The May meeting of the Florists' Club was a most enjoyable affair. Besides the interesting and intelligent essay delivered by Mr. J. R. Johnson which we will print in full in next issue, there was the feeling of elation at the gratifying results of the club's efforts in behalf of the Actors' Fund Fair, and mutual congratulations were in order.

A statement by Treasurer Weathered as to the healthy financial condition of the organization was also received with lively satisfaction. Mr. James Currie, of Milwaukee, was present and in a few brief remarks complimented the club highly and promised a hearty welcome for one and all present should they favor Milwaukee with a visit. Three new names were proposed for membership.

The Bowling Club meets regularly every Monday afternoon and the score board shows some wonderful figures. Ernst Asmus is the present happy possessor of the Club Medal.

On Tuesdays and Fridays as one turns from Broadway into Dey street, a sound is heard far above the din and roar of the street. It is not a fog-horn, it is the voice of the old veteran Elliott, who is as usual at this season of the year, on his high horse and independent as a wood-saw. "Why, gentlemen, I don't understand why you stand in your own light," he exclaims, and then blushes deeply as he gathers in a bid of 17 cents for a geranium, or a dollar for a Lilium Wallichianum superbum. But what superb geraniums those from J. & R. Leach, of Jersey City, are, especially the Gloire de France with their immense trusses.

"Oh, ain't them pretty Chinee Asters!" exclaimed a fair damsel to her companion while walking past the tulip beds in Central Park last Sunday. She comes pretty near being a rival for the average newspaper reporter when he tackles floriculture.

Boston.

Cut flower trade is extremely dull. Prices are very low on everything, roses particularly. The only life visible is in the spring plant trade.

The "War of the Roses" as it is facetiously termed by the daily papers still goes on. A fakir has been arrested and fined for peddling, and has appealed with the intention of making a test case of it.

WASHINGTON VIEWS.

The retail florists do not seem to be giving themselves much uneasiness over the present conditions. The growers are the parties who are making the most noise and the retailers keep in the background and have a quiet smile all by themselves. Meanwhile the fakirs are gradually getting themselves intrenched by hiring little angles and nooks on private property where they are safe from interference.

The sensation of the week has been the placing on sale and advertising extensively as a magnificent orchid, of the common little Goodyera pubescens or "Rattlesnake Plantain" of the woods. This was at one of the large bazaar stores. A colored representation of a big pure white Miltonia, blooms six inches across, hung back of the counter and was represented as the result which would come from the wonderful little plants, and the price was 27 cents per plant, or two for 50 cents. On investigation the firm claimed to have bought the plants in good faith supposing them to be as represented. The name of a certain Mr. Faxon, a seedsman in Boston, was given by the attendant as the party who supplied the goods. One of the refreshing statements made on the wrapper enclosing the plant was that it would grow "on a shingle hung on the wall," also "these plants have always been sold at exorbitant prices and we are delighted to be able to obtain some to offer you at such reasonable figures." On being informed of the deception the firm promptly withdrew them from sale, but what a contemptible position for a man who knows better to place himself in.

The May exhibition of the Massachusetts Horticultural Society was unusually successful and the attendance was very large. The azaleas shown by C. M. Atkinson were gorgeous, the tallest in the group being not far from ten feet in height, and were well entitled to the gold medal which they received. Kenneth Finlayson took all the prizes in the six plant and single specimen exhibits. A certificate of merit was awarded to Mr. Finlayson for a fine specimen plant of Cypripedium caudatum. The calceolarias from C. M. Atkinson were superb, also the cut blooms of tulips and daffodils. The displays of hardy spring flowering herbaceous plants from J. W. Manning and Wm. Martin attracted much admiration, and the native plants shown by E. H. Hitchings and Mrs. P. D. Richards were as interesting as ever. Wm. Martin took first premiums for show pelargoniums and zonal geraniums, and his streptocarpus were excellent. There were many other notable exhibits and the general quality of the show was so excellent all through that it seemed a pity to close the doors at the customary hour, 3 o'clock, the hall being almost packed with visitors at that time.

There has been a fine display of pansies every Saturday from R. S. Fay. Those on May 14 were particularly good. On the same day C. M. Atkinson showed a beautifully bloomed plant of Cattleya Skinneri, and the calceolarias from James Comley were excellent.

The prunuses and pyruses are making a beautiful show now at the Arnold Arboretum. Prunus Grayana is a new one from Japan, the flowers white and borne on

long racemes. Prunus Persica, the cultivated peach of Pekin, is covered with flowers of the loveliest pink. Pyrus Maulcii is a beauty. It is a great advance over the old Pyrus Japonica. The flowers are brilliant vermilion and cover the branches clear to the ground. The earliest lilacs to bloom here are Syringa oblata, a fine bright colored species, and S. hyacinthiflora, which is a double flowered sort.

The abundant rains of the past week have made their impression on the tulip show at the Public Garden and that gorgeous display will soon be a thing of the past, and the pansies will have their innings for a limited season. The rhododendron beds are in splendid condition and will be a fine show. The hardy herbaceous plantations at the Back Bay Park are brilliant with spring flowers now. The everchanging succession of bloom will be continual attraction to visitors.

Somebody found out that May 10th was Tom Cox's birthday. Also that this date the present year would be the 50th anniversary of that event. That was why Tom was seduced into a bowling alley on the afternoon of May 10th and kept there till nearly 8 p. m. by several of his cronies. That was also why the said cronies insisted on seeing Tom home, although they falsely represented to him that they were going to attend a democratic caucus, and that was why on arrival at Tom's residence lively strains of music mingled with sounds of merriment were heard, and why on further examination the house was found to be in the possession of another big delegation of his cronies, ladies included. It was expected that Tom would be surprised, and he was. The special business on hand was disclosed when he was escorted to the dining room and there informed in classic language by Mr. Fred Mathieson that the handsome new sideboard which stood there was to remain as a token of the sincerity of his visitors' congratulations. Mrs. Cox was not forgotten either, and a cosy rocking chair was the proof.

After Mr. Cox had voiced his thanks for the gift Mrs. Cox was called on for a word also, but she expressed inability to make a fitting response, adding, however, that had it been a cradle instead of a rocking chair she would have known what to say. The great trouble, though, is that they have never had any use for a cradle at Tom's house, a fact which Tom mourns and which ensures for him a sympathetic fellow feeling from his neighbor, Warren Ewell, who bemoans a similar condition of things at his own house.

It was the same old "Boston crowd" including the "Sheppard of the flock" from Lowell, who would have come had it been twice as far, and who made the wittiest speech of the evening. The party broke up in time for breakfast and the only regrets expressed were that the night had not been half long enough.

Among the visitors in town the past week were Samuel Henshaw of West Brighton, Staten Island.; Alfred Dimmock, representing Sander & Co., London; Geo. C. Watson, of John Gardiner & Co., Phila., and Martin Finaghty, of Lenox, Mass.

Do you WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

Do you WANT a list of the leading cemetery superintendents? You will find such a list in our new trade directory and reference book.

Chicago.

The supply of all stock is shortening. Roses are not coming in in such large quantities as a week ago, and prices are somewhat firmer. The cut is estimated to have dropped off fully one-half and quality is lowering also. From present appearances roses will be scarce for Decoration Day.

Reinberg Bros. have been cutting some good American Beauties. During the last week they cut an average of 400 to 500 a day. They have been very successful with this rose and of the 14 new houses they are now building one-half will be devoted to it. They will also grow a house of Mme. Pierre Guillot.

There is but little outdoor stock and what there is of it is poor, the result of the miserable weather.

The old red pæonies are making their appearance in the market. Those already received come from Hunt, of Terre Haute.

At the last meeting of the Florist Club Mr. N. Singler stated his conclusions regarding the carnation disease, which were in substance that in his own case the disease was due to an enfeebled condition of the plants brought about by propagating too early. He believes that when the plants are propagated before February the long sojourn in the houses before planting time weakens the constitution of the plants and thus renders them susceptible to attack by the disease. He attributes another failure to the use of what is called "paunch manure." This is manure obtained from the slaughter houses and is taken from the animals that are killed there. It is much used by farmers but Mr. Singler feels that it is dangerous for florists to use. It contains considerable half-digested matter and it is probable that this is what causes the injurious effect. He has another poor bench of carnations whose condition he attributes to the use of too large an admixture in the compost of what he calls "wild soil," from an uncultivated field. He is keeping an accurate record of the number of blooms cut from each of the varieties he grows and promises to later on give the club the benefit of his conclusions regarding the comparative profitableness of the different sorts. When asked whether he would be able to determine what the net cash returns per square foot of bench surface from each variety would be, Mr. S. innocently replied, "No. I can not determine that. You see, I sell part of my flowers and send the rest to a commission house," and but for the roar of laughter that greeted this statement the speaker would probably never have realized the construction that might be put upon it. But the commission men present enjoyed the joke as heartily as the others.

Mr. C. J. Strombach, head-gardener at Lincoln Park, favored the Club with some observations upon the use of hardy plants in and around Chicago, and expressed the belief that it would pay the florists who grew plants to pay more attention to this class. He stated that he was frequently asked by visitors to the park where these plants could be obtained and believed that an unsatisfied demand existed. But he warned his hearers that a selection should be made suited to the Chicago climate. He has had bad luck wintering campanulas at the park. He had plants that were 12 to 14 inches in diameter in the fall and hardly a trace of them could be found in the spring. The constant freezing and thawing and freezing again that plants get here tries them severely and only the very hardiest survive. It was questioned by one member whether the people would pay prices that would make the growing of such plants remunerative but the general sentiment was that the people wanted them and would pay for them. Several cited cases of demand that they were unable to satisfy and expressed the belief that sales would be large if these plants were placed before the people in an attractive way, and in quantity. As a side light upon the question it was stated by a commission man present that last season a grower had sent him a lot of flowers of the cup and saucer companula and every flower had been sold quickly at $1 a hundred blooms. And retailers said that people were quick to note and appreciate any odd and pretty addition to their usual stock of flowers and that a greater variety would be a benefit to all concerned.

Does it pay to grow good plants of cyclamens for this market is a question that may be answered both in the negative and the affirmative. Mr. Kirkham of Maywood states his experience as follows: "We grew about 100 plants for an experiment. They were good plants but all we could get for them in Maywood was 25 cents each at retail and that didn't pay. Then I brought a plant down to the Florist Club meeting. A member who has a city store asked me if we had any more and what we got for them. I told him and he took the whole lot at what we were selling for at retail. Later I found I could have sold the whole lot to another florist who also had a city store at double the price I had received." He couldn't sell at a profitable price in Maywood but dealers who had facilities for bringing the plants under the eyes of a larger number of possible customers could afford to pay him double his rates and still make from 50 to 100% profit for themselves. The community that demands geraniums at 10 cents each won't snap at cyclamens at $1 each, but there are (especially in large cities) lots of people who want something nicer than a 10-cent geranium and who want it bad enough to pay what it is worth.

Kennicott Bros.' new place of business is a big step forward. It is three or four times the size of the old one and is admirably arranged and fitted up. One excellent feature is a large cool room in which many flowers are kept to better advantage than in the ice boxes.

E. H. Hunt's new place is also a great improvement upon the old one. It is in a basement and a feature is a large cold room under the sidewalk. Such places keep flowers in much better condition for shipping than ice boxes, though the latter are of course also necessary.

The Schmidt Toy and Wheel Co., 177 Wabash Ave., intend to open a cut flower department in their store.

Among recent visitors from abroad was Mr. W. Segers, of the firm of Segers & Co., Lisse, Haarlem, Holland.

S. F. Leonard, the West Randolph street seedsman, has added a department devoted to bulbs and florists' supplies. Walter Heffron is now with Mr. Leonard looking after the interests of this department.

Geo. W. Miller will remain at his present location till fall, when he expects to have his new range of greenhouses ready for occupancy. He will in all likelihood build at Hinsdale.

The new greenhouses of the Lake City Floral Co., now building at Downer's Grove, are four 84x20, two 184x28, one 184x20 and one 12x88. They have a very pretty city store at 48 Adams street, of which Mr. A. G. Prince is superintendent.

FIELD OF TUBEROUS BEGONIAS.

The premium list for the chrysanthemum show of the Horticultural Society of Chicago next November, is now being printed and will be mailed to probable exhibitors within a few days. The prizes are very liberal and competition should be brisk.

J. H. Deitz & Co. will soon open a floral store at the South Park Station on the Illinois Central road.

Field of Tuberous Begonias.

We present in this issue a view of a field of tuberous begonias at the nurseries of John Laing & Sons, Forest Hill, London, England. Such a sea of bloom and such a wealth of color must have been a gorgeous sight indeed.

Philadelphia.

Chas. F. Evans was married to Miss A. R. Kenney, of Philadelphia, at West Arch Street Presbyterian Church, Thursday evening, May 12.

The chancel was very prettily decorated with palms, lilies and hydrangeas. The bride carried a bouquet of lilies of the valley and cattleyas; the bridesmaids, six in number, had bunches of white lilacs and cattleyas, and the maid of honor's bouquet was of Mermets; all the bunches were tied with a profusion of narrow ribbons in which were clusters of valley, sweet peas and asparagus.

After the ceremony a reception was held at the home of the bride, and the happy couple then started on an extended tour.

There is very little doing at present; people having country seats in the neighborhood of the city are moving out to them and many take up their residence at the large suburban hotels before going on their annual summer pilgrimage to mountain and seashore.

There has been quite a lot of funeral work. The death of two city officials occurred last week, at each of which there were some quite elaborate designs. College commencements made a slight demand, but they have almost ceased to be a factor in the spring business. Years ago florists used to have all they could do for important occasions of this kind, now they are scarcely noticed.

Roses are very plenty. La France, Brides, Mermets, Albanys, etc. bring 5 to 6; Perles, Sunsets, Gontiers, Cusins 3 to 4; hybrids and Beauties 15 to 25; carnations 1 to 1½; valley 4; smilax very scarce at 25; Harrisii lilies and callas 6 to 8.

One of the most successful growers in this neighborhood in speaking of the business recently said that he had been fairly successful and that he believed it was because he had given close attention to things that he found did well with him. He would not give a plant up without a fair trial, but if he found that his soil or location was not suitable, or for some other reason it did not do well, he would drop it. It was much better to do a few things right and have them in quantity when they were wanted than to grow a great variety of stuff. He kept a sharp lookout for new varieties and if he was convinced after a trial that a plant had merit he would work up a stock as fast as he could and not wait until it was in all the catalogues.

During a recent visit to the conservatory of the White House at Washington we noticed a very pretty flowering begonia, a cross between Bruantii and semperflorens gigantea rosea. It is pure white in center, shading to a bright pink at the edge of the petal. It is very distinct and will be a welcome addition to our winter flowering begonias. It has not been named as yet as the stock is small and Mr. Pfister has not been able to get a good plant so as to see it in perfection. He has some specimens of Ficus elastica on single stems 18 feet high; they are feathered to the bottom and are quite remarkable looking specimens. He says they are very useful in decorating.

The tulip beds were just about out of bloom. In planting the beds rows of crocuses are alternated between the tulips and in this way there is a succession of bloom for some time. Mr. Pfister grows all the tulips he needs and has not imported any for a long time. He says they increase even faster than he can use them and if anything he has better success than with the imported ones.

In the Central market, where a great many flowers are sold, there seemed a good supply and not much business, it (Wednesday) not being a regular market day. There are three regular days—Tuesdays, Thursdays and Satudays—and if the stall is not occupied three days in the week it is forfeited and rented to some one else. They rent for $75 a year. Most of the stalls are occupied by growers, in fact all are growers but some have stores in addition and it is a question as to which department sells the surplus stock.

Every one seemed well satisfied with the season's business and all look forward with pleasure to the coming of the Society of American Florists. There is no question that it will be a memorable session, and none should miss this opportunity to visit the Capitol and attend the convention at the same time.

William H. Westcott has removed from 2nd below Tioga to Ridge and Lehigh avenues. K.

Baltimore.

Thirty-four members showed up at the last meeting of the club, and everything seemed to indicate prosperity and good nature among the members. Surely the Easter trade must have been a thorough success.

Two new members were elected and thirteen associate or passive members were added to the roll. A resolution to visit Bay Ridge on August 19th, the same date on which the Washington Club purpose taking a trip there, was passed.

Then came the event of the evening, the debate on the question, "Resolved, that it is more economical to use 2-inch pipe than 4-inch, in fitting a house 100x20 feet for hot water.

First of all came an argument on the question of a jury to decide the case, Mr. Ekas moving to leave the whole question to a vote of the club, but after the motion was passed, an argument by Mr. Moss led to a reconsideration, and three judges were appointed, Messrs. Wiedy, Seidiwitz and McRoberts.

The first step in the debate developed the astonishing fact that there was only one man on the negative side, outside the judges, and though that one man bore himself nobly and made answer to each opponent in turn, and to some two or three times, yet he was overpowered by sheer force of numbers and the decision was against 4-inch and in favor of 2-inch pipes.

Mr. Hess, who opened in the affimative, stated that the difference in cost of pipe would be 4 to 5 cents in favor of 2-inch pipe, also that 1000 feet of 2-inch would do the same work as 1000 feet of 4-inch and be much easier to put up.

Mr. Ekas followed with quite an elaborate argument for 4-inch pipes, claiming that the cost set up was really less than that of 2-inch. While the body of water cooled slowly, avoiding quick changes, which he thought very injurious to plants, besides 2-inch must be heated to high temperature or they would cool before reaching the end of a long house. Had considerable experience in hot water heating and considered six tons of hard coal an ample supply to heat 1000 square feet of house. Used a flue in connection with boiler fire.

The replies to his argument were numerous, one of the members, having tried both, was in favor of 2 inch but could give no estimate of proportionate cost of running the 2-inch system. Another argued that if 4-inch were good 5-inch would be better, but knew of a place where 5-inch pipe did not heat well at all. Mr. Moss also thought quick cooling an advantage as pipe would heat quicker when needed, and that the same number of running feet of 2-inch would do the work of 4-inch pipes. Considered 4-inch pipes clumsy and in the way.

Mr. Ekas closed by arguing that all failures in the use of large pipe were due to imperfect placing; preferred raising pipe to highest point as soon as possible after leaving boiler.

The judges were Messrs. Wiedey and Seidiwitz for affirmative, Mr. McRoberts for negative, the latter giving as his opinion to a member afterwards that to argue that 6 square inches of radiating surface, could give out as much heat at the same temperature as 12 inches could was sheer nonsense, and that properly placed pipe of either 2-inch or 4-inch could be heated to as high a temperature as would be safe, as when 212° was passed steam would generate and the water blow out.

It is a pity the club was not divided equally and a more evenly balanced discussion secured.

Business has been rather slack in cut flowers during the week, the chief features being the enormous lots of shrubbery blooms in the markets, and a heavy supply of roses in the stores. Everything seems plentiful, and prices are very low still, very fair valley being offered at 25 cents per 100, and good ordinary La France going a begging at 3.

The trade in plants is mending daily though, and what is lost in flowers may be made up in geraniums, coleus, etc.

MACK.

Toronto.

Every one can buy roses now. At the market on Saturdays they have been selling at prices for the million, though all the same there is not "millions in it" for the growers; however, they seem to think it better to get what they can rather than dump their stock on the rubbish heap. Manton Bros. and some others who have stalls on the market have been making a good thing out of this line; some of the stores, however, are kicking like two-year olds and Tom Manton, who has been I am afraid the ring leader of the market gang, says he is getting quite used to being called a "fakir." It is doubtful, though, if it really does the stores any harm, because the class of people who go to the market are not the class who can afford to buy roses unless they can get them at low rates and is it not a good thing that these people should have a chance now and then of getting flowers, thus keeping their love for flowers alive? Low prices now may bring increased trade in the future.

Mr. Aylett, formerly gardener to Goldwin Smith, Esq., whom I mentioned some time ago as being very ill with "La Grippe," died this week. He had reached the ripe age of 80 years. As many of the brethren as could leave their work at this busy season paid their last respects at the funeral. Mr. Aylett's son is gardener to Senator Sandford at Hamilton, and has charge of probably the largest collection of orchids and stove and greenhouse plants in Canada.

Isn't Odontoglossum vexillarium (or Miltonia vexillaria as the books call it) a very pretty orchid? What could be prettier to adorn the head of a brunette? It seems to be very easy to grow too, and takes up very little room. I think the florist who invested in 25 or 50, or even more, plants would not lose on them. I recently bought a few imported plants and they are all making fine growth, root and leaf.

Prices of plants are very low at present, but it is hoped they may rise when the general demand sets in. E.

Buffalo.

There were so many changes about the 1st of May, it is hard guessing where any body can be found. One firm, through the terribly dilapidated condition of their newly acquired store, had to call on another Main street florist for temporary accomodations which were gladly given. But it was a little vexing to see some city officials walk in, ask for that alien firm, give an order for about one hundred dollars and walk out entirely ignoring the man who was paying for the store. But we believe this is all right and shows a high state of civilization.

Among the plant men it is a very busy time.

Daniel B. Long is about settled in his new quarters on Washington street. The convenience of a reliable wholesale florist is already felt and every one seems to be glad that we have such a depot to call on. More particularly must this be a benefit to many florists in country towns who now can depend on their wants being supplied without sending four hundred miles. A pretty neat little card was received to-day from D. B. L. announcing that he would hold an opening on May 16 at 4 P. M. Dan knows how to get the boys together and I am willing to wager they will be treated well when they do assemble. After Dan's reception several of the boys will roll their concluding games in the tournament, so look out for an awful fall of averages.

Very busy times has kept the attendance at the florist club meetings rather small, but under the able management of Cowell as president and old man Mepsted as secretary, we are improving rapidly. Three weeks ago W. Scott read a paper on "Sub-tropical Gardening" which the secretary in his minutes said was "comprehensive, instructive and interesting," and last week Mr. Milley read a paper on the Begonia. If the florists of this country were not so well posted in everything these papers would be well worth printing.

Prices of flowers have dropped some, but not to starvation prices. Carnations retail at 35c and 40c per dozen, Brides, Mermets and La France, $1.50 per dozen. Of smilax there is none within 200 miles. The terrible dry and cold April hurt outside stuff badly, and there is as yet no competition with glass grown flowers.

G. S.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. C. VAN LINDLEY, Pomona, N. C., president; W. J. PETERS, Troy, O., vice-president; CHAS A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY Franklin Grove, Ill., treasurer. The seventeenth annual meeting at Atlanta, Ga., June 1 to 3, 1892.

Trees and Shrubs in Bloom, May 11.

BY WM FALCONER, GLEN COVE, LONG ISLAND

The weather for some time back has been cool, especially at night, and the blooming time of trees and shrubs is, according to my diary, exactly eight days later than it was this time last year.

Maples, lindens, bird cherries, horse chestnut and many other trees are advancing into fine leaf growth; and sweet chestnuts, hickories, catalpas, locusts and others of a later stamp are bursting into life.

Peach trees are out of bloom, so too are cherries; plums and pear trees are in their showiest estate or failing, with the apple tree buds colored and many of them opening. Red currants are in full bloom, black currants beginning to open, and some gooseberry bushes in flower and others setting fruit. Strawberry plants have commenced to flower.

The time of blooming of plants in spring depends a good deal upon local circumstances; a forsythia on the south side of your house may come into bloom in March, and another of the same sort on

the north side not till the middle of April. Plants are also earlier in light dry land than in heavy soil.

LILY OF THE VALLEY is one of the best guages of the season. We gathered the first lot from out of doors yesterday (10th), it is fine to-day, and will be at its very best on the 13th to 18th.

FORSYTHIAS are about past. Viridissima in heavy land and sheltered from sunshine partly is still very fine.

THE EARLY BLOOMING MAGNOLIAS are much past their best, conspicua and stellata altogether. Soulangeana, Alexandrina, speciosa, gracilis and others of that type have a good many blooms yet; Lenne is in fine form, so too are the red and purple varieties of obovata. Kobus bloomed unusually well this spring, flowers small, white, faintly fragrant. Altogether, perhaps, it is the poorest of our Japanese magnolias.

SPIRÆA THUNBERGII has been in bloom some time, so too has prunifolia fl. pl., and now we have media, a real good shrub with many a synonym; hypericifolia, which isn't worth growing, and the curious, and just now quite handsome, lævigata.

EXOCHORDA GRANDIFLORA will not be in full bloom for two or three days yet; its first flowers are opening. Albertii, another species, is quite hardy and a good grower starting into growth earlier in the season than grandiflora. It has not yet flowered with us.

CERCIS CHINENSIS, commonly called C. Japonica, and C. Canadensis are the only kinds of red bud we grow. The Asiatic species is now splendid and much more of a bush than is Canadensis which is a little tree and now likewise quite showy, but not nearly as bright as Chinensis. Siliquastrum isn't quite hardy here.

RHODODENDRON VASEYI is in full bloom. It is the earliest and most beautiful of our deciduous azaleas; the color in different plants varies a little in depth. Ledum latifolium has just opened, Andromeda polifolia is in perfection, and Rhodora Canadensis in full bloom and beginning to grow.

JAPAN QUINCES are in their heyday—in full bloom and plentiful leafage. But the Chinese quince isn't yet in blossom.

BERBERIS THUNBERGII is in good leaf and full bloom and many of last year's scarlet berries are yet dangling among the bushes. The mahonia is showy still, but dropping. Microphylla is the fullest in bloom of the yellow flowered hardy ones, but many that are somewhat tender (here) as empetrifolia, Darwini and stoloniféra are also opening prettily.

ELÆAGNUS LONGIPES is in full bloom. It's neat, well branched habit and great profusion of silvery gray flowers make it quite a handsome object now, but its greatest beauty will be in a few weeks from now when its fruit is ripe.

RUBUS DELICIOSUS has large showy white flowers on arching branches. Not quite at best yet. Its fruit, notwithstanding its specific name, doesn't amount to much.

SAMBUCUS PUBENS has a bunch of whitish flowers from every eye of every joint of its young wood.

KERRIA JAPONICA, single, is in good bloom; the variegated leaved variety also has commenced, and the swollen buds of the double form are ready to burst.

RHODOTYPES KERRIOIDES, also known as the white flowered kerria, has begun to bloom. Lots of the black fruit from last year hang on the bushes yet, and a pasture of self-sown young plants is springing up beneath them.

No deutzias yet.

DAPHNE GENKWA is a little shrub from China and Japan, and just now its naked stems and twigs are completely covered with sweet lilac-blue flowers. Foliage comes later. One of the gems of our collection.

SIBERIAN BIRD CHERRY (Prunus Maackii) is something nice in the way of a small tree. It has been in full bloom since eight days, and also is in full foliage and growth. Its flowers are white, in graceful racemes and sweetly fragrant, and the appearance of the great abundance of the airy showy flowers among the plentiful foliage has a charming effect. The European (P. padus) or American (P. serotina or P. Virginiana) are not yet in bloom.

THE "FLOWERING" JAPANESE CRAB APPLE TREES are just now the glory of our gardens. Their buds are brilliant, their blossoms beautiful, and all appear in the greatest profusion. There are single and semi-double flowered varieties, and bush-tree and weeping forms of them and all are beautiful. And no small share of our interest in them is taken on account of the multitude of pea-sized little apples they bear in such vast quantity in fall.

THE SIBERIAN CRAB APPLE we grow as a lawn tree in a semi-spherical form. It is now in full bloom, and the flowing habit of the tree, showy flowers and plentiful foliage, give it now a very attractive appearance.

THE CHINESE double-flowering apples are only opening. How beautiful they will be in a few days! The habit of the tree is stiff, but the profusion of blossoms is enormous, and these are ropes of yellow, red-tinged small apples in fall, which also are very ornamental. But the fruit is worthless.

PRUNUS AMERICANA in several forms is grand, white as snow. Still I wouldn't recommend them for small gardens. Myrobolan plum trees are out of bloom, and Cherokee fading.

THE BEACH PLUM (P. maritima) is just opening; a few days from now it will be a snow bank. It grows well, blooms extravagantly and fruits moderately in cultivation.

THE BLACK THORN (Prunus spinosa) is fading; was very fine a week to ten days ago. Ours is the double-flowered form. Were it the single one Pat would not leave a sprig of it to grow so long as he could cut from it a shillalah and Fritz had a crown to crack. But the double variety is a bastard form and has no virtue in it.

THE DOUBLE-FLOWERING JAPAN CHERRY, pink, has been in splendid bloom since nine days; petals now beginning to drop. Even quite small plants bloom freely, and the flowers are so large and showy! Have single-flowered ones too.

WILD RED CHERRY (Prunus Pennsylvanica) is in finest bloom; its arms are wreathed with closely set umbels of white spiræa-like flowers. A lovely object and alive with honey bees.

A WILD DWARF CHERRY (Prunus) from the Black Hills is a little beauty 2 to 3 feet high and laden with little white flowers. Fine for the front of shrubbery clumps.

DOUBLE-FLOWERING ALMONDS so-called, pink and white, are in their prime, and lovely little shrubs they are, and

THE WEEPING, OR GROUND CHERRY, worked standard high is studded with white blossoms.

VIBURNUMS.—There are three in bloom, namely, V. lantanoides, our native moosewood; V. lantana, the European wayfaring tree, and a variety of the last named, V. lantana var. rugosum. The blossoms of all are much alike, white, in dense, terminal cymes, and so too are the foliage and habit of the plants. This variety rugosum is generally catalogued V. rugosum, as if it were a distinct species, a mistake we should guard against as there is a species of that name, an evergreen plant, not quite hardy here.

THE FLOWERING DOGWOOD has got white but is not yet in its finest form. The weeping variety is fully as profuse as the type, and the red flowering one is just as free as the white.

THE AMELANCHIERS in the woods and gardens, from the alpine dwarf to the shadbush tree are white as snow, but a little past their best. Asiatica is later and now only opening.

SEVERAL CARAGANAS are in bloom, notably the little Chimlagu and Radowskyi, but there are lots of prettier garden shrubs.

FOTHERGILLA ALNIFOLIA, a little beauty from the Southern Atlantic States and perfectly hardy here, is now in full bloom. Every little twiglet is terminated with a catkin-like tuft of white bundle-of-stamens blossoms.

CELASTRIS ORIXA, a strong smelling woody vine is now laden with little green flowers; and Schizandra Chinensis is dotted all over with white ones barely open.

STAPHYLEA COLCHICA, a beautiful species with white, waxy, fragrant flowers; and S. trifolia and S. primata, lesser lights by far, are all bursting into bloom, but won't be at their best for some days yet.

THE FLOWERING CURRANTS, namely Ribes aureum, the yellow one, and R. Gordonianum, light crimson, are still in good bloom. Sanguineum isn't reliably hardy on Long Island.

AMONG BUSH HONEYSUCKLES, fragrantissima is still in fine bloom and leafing out freely, but Standishii is past and the fruit swelling. Lonicera cœrulea is at its best, but as it has neither color, beauty nor fragrance, it is not worth growing.

Common English Names for Trees.

Mr. J. G. Lemon, an eminent botanist of Oakland, California, in a pamphlet just received, makes an earnest appeal for English names for trees. He prays us to ignore senseless, inappropriate names, and insist upon suitable, descriptive and distinguishing names, and upon having one name, but one only, for each kind of tree. "For instance," he says, "in one short range of Californian mountains, there are seven different species of pine. Four of these pines are called by the same name, and that the meaningless one, 'Bull Pine.' Now, one of these species—Pinus Coulteri—bears the largest and heaviest cones in the world, often weighing five to eight pounds each. What better name for this tree than Big Cone Pine? A second—P. Sabiniana—has pea-green or grayish foliage. Gray-leaf Pine is suggested for this tree. The third species—P. Jeffreyi—has dark, often black bark, finely checked, in strong contrast with the fourth species, the lighter-colored well known Yellow Pine—P. ponderosa—with which it is often associated.

What better name for this third tree than Black Pine?" A first rate idea, Professor, you have our sympathy and support. The author then gives a popular description of sixty-four coniferous trees indigenous to this country west of the Rocky Mountains, and mentions a distinct English name which he suggests for each of them.

NORMAL, ILL.—The articles of incorporation of the Home Nursery Co. were filed with the recorder May 9. The company has been in business for three years, but had not recorded its certificate. The capital stock is $50,000, and is divided among the following persons: W. H. Schureman, $30,000; G. A. Griggs, $2,000; W. P. Marley, $3,500; E. N. Vencel, $3,500; George Austin, $2,000; W. Hudson, $2,000; James Bland, $2,000; T. C. Martin, $2,000.

REGARDING the spring trade Mr. C. L. Watrous, DesMoines, Ia., writes: "The nursery trade has lasted longer this spring than any other spring for 25 years. Storms and mud unprecedented. Trees slower in coming into leaf than I remember for more than 20 years. Trade excellent. Collections never better.

WINFIELD, MO.—The Stoner Nursery and Investment Co. has been incorporated with headquarters here. Capital stock, $10,000. Directors, J. L. Gaston, Springfield, Mo.; Charles Beck, W. J. Nevins and Z. A. Swope, all of Winfield; J. E. Stoner, C. L. Stoner, Sedgwick, and J. D. Stoner, of Peabody.

DETROIT.—The board of public works has decided to at once begin the grading of Medbury boulevard, and the park and boulevard commission will begin the work of beautifying the same with trees and shrubs as soon as the grading is finished.

RIVERTON, ILL.—The Spaulding Nursery & Orchard Co. has been incorporated with its principal office here. The capital stock is $100,000 and the incorporators are James B., Albert A , and Irving E. Spaulding.

MR. W. F. HEIKES, manager of the Huntsville Nurseries, Huntsville, Ala., is at present sojourning in the World's Fair City. He predicts a good time at the Atlanta convention.

News Notes.

FT. WAYNE, IND.—Mr. J. N. Vesey has just completed two fine rose houses.

KALAMAZOO, MICH.—Van Bochove Bros. are building two new greenhouses.

ITHACA, N. Y.—Prof. L. H. Bailey, of Cornell University, is dangerously ill with bowel trouble.

MR. H. BAYERSDORFER, of H. Bayersdorfer & Co., of Philadelphia, sails for Europe on the 18th inst.

CLEVELAND.—Richard Pollard, one of the oldest established florists in this city, is about to retire from business.

MEADVILLE, PA.—Easter trade was very good. Spring trade is picking up though it has been much retarded by the cold weather.

MOLINE, ILL.—The recent high water got into the greenhouses of both florists here, but no material damage resulted as they were on pretty high ground.

ONEIDA, TENN.—Ellis Stephenson, formerly of Burnside, Ky., has located here and will grow bulbous stuff, for which he considers the soil and seasons favorable.

DAVENPORT, IA.—F. L. Bills & Co. are building two new houses each 20x100. The recent floods reached some of the greenhouses here but not much damage was done.

WILMINGTON, DEL.—The Easter trade was better than ever before, both in plants and cut flowers. Prices were only moderate until Saturday afternoon when they advanced considerably.

NORRISTOWN, PA.—James Chalk has bought out the stock of John Cunningham, of Sandy Hill Greenhouses, and leased the two houses. He will add several new houses to the establishment this season.

SPRINGFIELD, O.—Mr. Frank McGregor, of the firm of McGregor Bros., sails about May 30 by Anchor Line for an extended European trip. Messrs. McGregor will build six new greenhouses 20x120 feet this summer.

DAYTON, O.—Messrs. J. C. Vaughan and H. W. Buckbee paid us a visit last week. J. B. Heiss is building two rose houses 30x146. John Boehner has added a house 12x110 for carnations. Market trade has not been very good yet, on account of bad weather. Easter trade was excellent.

SOUTH BEND, IND.—The Studebaker greenhouses have an elegant display of calceolarias and pansies. There is a demand for blue carnations in this city which a local florist procures from a Chicago firm. What next? Business good all along the line, but prices ruling very low. No planting done yet on account of bad weather.

SAN FRANCISCO.—It is reported that a Chinese company has been organized with the object of monopolizing the business of growing cut flowers for this market. Chinese competition is a menace to any business and the matter will receive consideration at the next meeting of the Florists' Club of California.

ST. PAUL.—The executive committee of the Minnesota State Hort. Society held a meeting May 4 to arrange for the horticultural display from Minnesota at the World's Fair. It was resolved to ask for $15,000 of the state appropriation for the purposes of the horticultural display. Probably one-half of this amount will be obtained.

NEWPORT, R. I.—The early grapery at Mrs. Edward King's, where Andrew Ramsay is gardener, is a magnificent sight. The crop is remarkably even and hardly a bunch in the house that will go under a pound. His method of training the spurs is so perfect that hardly a bit of the glass can be seen from the inside, the splendid foliage completely hiding it.

DESMOINES, IA.—The heaviest loser by the recent hail storm was R. A. Rollinson whose loss was about 1200 feet of single thick glass. R. L. Blair and Mr. Anderson each report about 200 8x10 glass broken, and W. L. Morris 40 10x12. Cole's Conservatory and Mr. Lozier's greenhouse lost but very few lights. J. F. Marshall's loss was about 1000 10x12 single thick as before reported.

LAFAYETTE, IND.—Fred Dorner will add two large new houses the coming summer. Mr. Dorner will introduce a set of twelve of his best new carnations in January next. He devotes two houses to the trial of new varieties, having many hundred seedlings in bloom on his benches now. In size and variety of color Mr. Dorner's carnations seem to lead the country at this time. He is shipping cut blooms of these largely.

TAYLORVILLE, ILL.—Wm. H. Kirkwood will build two greenhouses 100x20, with a lean-to 100x8 this summer in this thriving little city, under the supervision of M. B. Leach, who is to be general manager of the business. Taylorville is about 25 miles southeast of Springfield, at the crossing of the Ohio & Miss. and Wabash railroads and is enjoying quite a business boom, especially in the building line. The new greenhouses will be first class in every particular.

EVANSVILLE, IND.—Messrs. Niednagel & Halbrooks, the lessees of the Carmody greenhouses, will dissolve partnership July 1. Mr. Niednagel retains the old place and Wm. Halbrooks will build three greenhouses on his property in Oregon street. Wm. Blackman will build a new carnation house 100 feet long the coming summer. A good story is told of one of Evansville's fashionable ladies, who sent her daughter to a well known florist to know if she could get some orchids as her mamma had not decided as to whether she would wear orchids or nasturtiums.

Horticulture in the Annexed District.

TATTLER IN NEW YORK NEWS.

The spring opened about three weeks ago and the first robin put in its appearance. Somebody saw the redbreast and soon, as this is an extremely gossipy district, everybody knew about it. Then the storekeepers began to hang out epitaphs something like this:

Al Kinds Off Garden Sedes
Consunly on Hand.
Nowse the time to plant.
The First Robbins in Town.

Everybody that contemplated dabbling in husbandry nibbled at the bait and there was a heavy run on the stores. Most of the annexed district country is built upon a rock and the farm land isn't more than a few inches deep, but those who hadn't sufficient soil borrowed it from where it was thicker, and soon they all had their seeds well under ground. Every morning after that the rear farms were filled by men poking into the ground to ascertain if the seeds had sprouted yet, and the front lawns were likewise inhabited by petticoated Psyches, scratching the soil to see if their flowers had got a move on them. Nothing enlivening happened until one day last week, when the annexed district howled in several or more languages. Male citizens peeped from behind their window curtains.

"Mariar!" they yelled; "come and look at the garden!"

"Is the peas up?" came from under the coverlets.

"Peas, nothin'!"

"Any buds on th' marigolds?"

"Dod gast the marigolds! Great Scott! Come an' look at th' garden!"

"Who's that ringin' the front door bell? The milkman?"

"Milkman? Nah! It's a boy with a snow shovel. He wants ter clean off th' sidewalk."

"I told you that you must give up your club an' now you must. Snow shovels! John, you're drunk yet."

And then two forms in their nighties peered through the window and saw the

TRANSPORTATION BUILDING AT THE WORLD'S FAIR.

garden with a two-inch overcoat of snow all over it, and when the proprietor of the male gown said a whole lot of bad words, the female gown patted him upon the back and didn't kick a kick. Both were mad all through. Their seedlings had been nipped in their budlets and the air was loaded with frenzy and ejaculations of unorthodox brand.

Then the country stores swarmed with irate citizens of both sexes, and if the man who had discovered the first robin had been on hand he'd have been lynched.

It was afterward learned that the robin redbreast was really a robbin' redhead, and that a Mount Hope slavey had been cutting her firebrand bangs and had thrown them from the window of her boudoir. They had lodged in a tree and had been discovered by the near-sighted citizen, who had translated them into the historical spring harbinger. The agriculturists were pacified by the storekeepers, who informed them that the seeds were all right and that the snow wouldn't hurt them. If the frost continued, they were advised, they should cover the plants with anything that would keep them warm until spring really meandered along and the seeds were probably far enough under ground to look out for themselves.

Next morning the whole district looked as if it had been struck by a wad of paresis or as if the ubiquitous dog had broken loose and had been a target for all kinds of cellar and bedroom furniture. The frost had continued and the front gardens were sprouting plug hats, blankets, strawberry boxes, tin cans and dry goods boxes. The housewife had, to protect her plants, covered them with all sorts of household bric-a-brac. Tender geranium shoots wore desuetuded Easter bonnets, budding rose bushes bent under the weight of ancient fur caps, honeysuckles had vari-colored 16-button stockings on their limbs, cute little pansies were almost smothered under pillow cases, chrysanthemum shoots were up to their necks in inverted beer bottles, and johnny jump-ups, marigolds and verbenas snuggled under cast-off tomato, peas and asparagus cans. One lady on Mount Hope covered her flower bed (about as big around as an old fashioned pumpkin pie) with a woolen comfortable and placed hot bricks under it to keep the plants cosy.

The back yard fiend wasn't going to be left, either. He rigged up all sorts of constructions to keep his seeds from going back on him. His form of paresis was to saturate the soil with hot water from the kitchen boiler, via the garden hose, and when the nozzle would get hot and he forgot to let go in time he'd screech himself raw and do the skirt dance, to the immense delight of his funny neighbors. Another built a shed over his stillborn vegetables, while still another covered his with old overcoats, trousers and waistcoats. Nearly every farm resembled a Baxter street coatery, pantry and vestry, and exultant citizens told each other, over the party line fence, that they'd got the bulge on the backward spring and that she could balk just as long as she derned please.

When Easter Sunday came and the seeds hadn't poked their snoots above ground the farmers began the poking seances again. They couldn't find the seeds. They had either been frozen or the citizens forgot exactly where they had placed them. Then there was more skirt dancing and, as the front lawn plants had also been nipped, the dance extended all around the house, and the deep bass and the falsetto ejaculations of dismay commingling the Annexed District became a howling wilderness. New flowers and new seeds had to be purchased, and it's dollars to doughnuts that both crops will come up and that every farmer in the section will have a beautiful mixture of produce when they show above the surface. It doesn't matter much, however, for the average amateur granger can't recognize the difference between dandelion and burdock and peas and onions, and it's even betting that after they have weeded their farms the weeds will remain intact and the vegetable greens will be over the fence the lick's out.

Transportation Building at the World's Fair.

The Transportation Building is exquisitely refined and simple in archetectural treatment although very elaborate in detail. In style it savors much of the Romanesque. The main entrance consists of an immense single arch enriched to an extraordinary degree with carvings, basreliefs and mural paintings, the entire feature forming a rich and beautiful, yet quiet, color climax, for it is treated in leaf and is called the Golden Door. The remainder of the architectural composition falls into a just relation of contrast with the highly wrought entrance, and is duly quiet and modest, though very broad in treatment. It consists of a continuous arcade with subordinated colonnade and entablature. Numerous minor entrances are from time to time pierced in the walls, and with them are grouped terraces, seats, drinking fountains and statues. The interior of the building is treated very much after the manner of a Roman basilica, with broad nave and aisles. The roof is therefore in three divisions. The middle one rises much higher than the others, and its walls are pierced to form a beautiful arcaded clearstory. The cupola, placed exactly in the center of the building and rising 165 feet above the ground, is reached by eight elevators. These elevators of themselves naturally form a part of the Transportation exhibit, and as they also carry passengers to galleries at various stages of height, a fine view of the interior of the building may easily be obtained. The main building of the Transportation exhibit measures 960 feet front by 250 feet deep. From this extends westward to Stoney Island avenue an enormous annex, covering about nine acres. This is one story only in height.

Popularity of the Carnation.

The old home of the carnation is on the walls of castles and other famous buildings in Great Britain. It is a single white fringed flower, comparatively small and far from being showy, but always attracted attention on account of its remarkably sweet odor. It is said that when the Romans invaded Britain they were so struck by its sweetness that it was carried to Rome and by the Roman florists vastly improved. This was the first given of the cultivation of the carnation. It soon became very popular and was used extensively in making wreaths and garlands to crown the gods on festival days and to be worn as chaplets by conquerors and others on great occasions. It was called the flower of the gods, in consequence of this popular use. Our botanical name Dianthus literally expresses this fact. It is worthy of note that, although having been in cultivation for nearly two thousand years, it still retains its great hold on popular affection; indeed, its popularity has grown remarkably since a variety was introduced several years ago which continued flowering during the latter part of the season. This was owing to the production of branching stems from the flower shoots. The carnation of the last century did not do this; it simply threw up a flower spike, produced its large and sweet flowers at the apex, and then was done for the season; but as soon as it commenced to throw out flower shoots from every joint, the class known as "winter blooming" was introduced. This has added so immensely to its popularity that now large houses are wholly devoted to the culture of the winter blooming carnation, and in spite of all the love that has been showered on the rose as a popular favorite the carnation stands its ground as an able competitor. There have been societies and periodicals devoted wholly to the encouragement of rose culture, and now the carnation has entered as a rival even in this field, and a society has been formed devoted especially to its interests. During the past few months a national carnation society has had its birth in Philadelphia, and promises to be quite as popular and as successful as any rose society ever was. There is a large field yet for improvement. At present there is no especial type to which the carnation improver breeds, everything seeming to be left to haphazard and the momentary popular taste, the great effort of florists principally being to produce a kind that

will produce an enormous quantity of bloom at the smallest possible cost. There is no doubt, however, that under the encouragement which such a society will give it we may look eventually for beautiful forms and characteristics in these flowers, which no one is thinking of at the present time.—*Meehans' Monthly.*

Directory Leading Horticultural Societies.

We give below a list of horticultural societies that make plants and flowers a leading feature of their exhibitions, with the name and address of the secretary of each society. If there are any other societies that should be added to this list we ask to be advised of same, that we may make such addition. We believe a complete list will be of interest to many:

MASSACHUSETTS HORTICULTURAL SOCIETY.—Robert Manning, sec'y, Horticultural Hall, Tremont street, Boston, Mass.

PENNSYLVANIA HORT. SOCIETY.—D. D. L. Farson, sec'y, Horticultural hall, Broad street, Philadelphia, Pa.

RHODE ISLAND HORT. SOCIETY.—C. W. Smith, sec'y, 55 Westminster street, Providence, R. I.

WESTERN NEW YORK HORT. SOCIETY.—John Hall, sec'y, Rochester, N. Y.

CENTRAL NEW YORK HORT. SOCIETY.—H. Youell, sec'y, 228 Beecher street, Syracuse, N. Y.

WORCESTER COUNTY HORT. SOCIETY.—Edward W. Lincoln, sec'y, 5 Oak street, Worcester, Mass.

HARTFORD COUNTY HORT. SOCIETY.—Edwin A. Taylor, sec'y, box 1,015, Hartford, Conn.

HAMPDEN COUNTY HORT. SOCIETY.—George D. Pratt, sec'y, 192 Maple street, Springfield, Mass.

HORT. SOCIETY OF CHICAGO.—G. L. Grant, sec'y, 322 Dearborn St , Chicago.

NEWPORT HORT. SOCIETY.—John Butler, sec'y, Newport, R. I.

NEW ORLEANS HORT. SOCIETY.—Charles A. Wise, sec'y, Third and Prytania Sts., New Orleans, La.

SPRINGFIELD AMATEUR HORT. SOCIETY.—G. H. Lapham, sec'y, Springfield, Mass.

BRIDESMAID,

THE SENSATIONAL ROSE

OF THE COMING WINTER.

WATCH IT.

LAST WINTER'S RECORD.—First: A FAST COLOR in all weather. Second: Absolute exemption from malformed blooms. Third: Always selling for fifty per cent more than any other roses of the Mermet class. Fourth: Exhibited once; at Philadelphia; winning both Certificate of Merit and a First Premium.

NOTE.—The Shape of the Bridesmaid is the same as that of The Bride. Its peculiar pink color is distinctively its own, and weatherproof. The bushes are robust, have never had mildew and have not been overtaxed for cuttings. They are free bloomers. For an independent description of it see AMERICAN FLORIST for April 21st, page 828, top half of first column. The young plants this season have been distributed from California to France; but chiefly in northern New Jersey and northern Ohio. Some splendid plants remaining. For references, consult neighboring rose growers.

We can now furnish in any quantity desired Debit and Credit Tickets of which we give below samples reduced one-half in size.

The debits are printed in black and the credits in red, so they can be readily distinguished. They are put up in blocks of 100—50 of each, placed back to back; thus but one block will have to be carried. By means of these tickets an entry of a sale or receipt of goods can be made anywhere in the house or in the field and afterwards filed. Tickets for each transaction in your business will make data from which a bookkeeper can readily work. With this simple and easy means of keeping a record of your business can you afford to neglect so important a matter?

Price of Tickets, postpaid, 100, 20c.; 200, 35c.; 300, 50c.; 500, 75c.; 1000, $1.40.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

A GENERAL INTRODUCTION.

There has been some little complaint of the difficulty of identifying those we would like to meet and become personally acquainted with at the annual conventions of the Society of American Florists. Various plans to make identification easier have been suggested, but all have either been impracticable or have had some objectionable feature that militated against their adoption.

The AMERICAN FLORIST proposes to solve this problem in a way that will we believe be eminently satisfactory to every member of the society, and without any expense to that organization. Our plan is to print in our convention supplement portraits of every member of the Society of American Florists who expects to be present at the Washington meeting. Of course, in order to give space to such a large number, each one will be reduced in size, but they will be good portraits and large enough so that the originals may be readily recognized from them. These portraits will be numbered consecutively and the names given opposite their respective numbers on an adjoining page, and there will also be given in the supplement an alphabetical list of the names, referring to the portrait by number, so that reference from and to the portraits will be quick and convenient.

If you expect to be present at the Washington meeting next August, and are a member of the Society of American Florists, or expect to join at Washington, please send us a recent photograph of yourself, cabinet size preferred. If you have no recent photo, have one taken. This should be attended to now, for with the great amount of engraving that will have to be done we must have the photos in hand by July 15 at the latest. And do not send photos that need to be returned to you as they will have to be cut in arranging in the groups. If you have a good recent photo send it in to us now, always writing name and address on the back.

THE summer course in practical horticulture for 1892 at the Bussey Institution of Harvard University opens July 6. For a synopsis of the course, both lectures and field work, address Prof. B. M. Watson Jr., Jamaica Plain, Mass.

W. H. H.—It depends entirely upon circumstances. The matter has been thoroughly discussed in these columns. Look up your back numbers. Your method of cleaning flues has also been described before.

THE Fort Worth Nursery and Seed Co., Dallas, Texas, send us a dozen Cape Jessamine buds of extra size and with very handsome foliage. They came through by mail in excellent condition.

WE HAVE received from Mr. S. J. Galloway, Eaton, O., a sample of the straw mats for use on hot-bed frames, which he is manufacturing. It was well made and would apparently meet all requirements.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By Scotch florist of 20 years' experience in rose and carnation growing and general floral work. Good references; strictly sober; single. Address

Box 234, Lee, Mass.

FOR SALE—Two greenhouses 60 x 16 each, hot water, sheds, office, etc, on three lots fronting Windsor Ave., convenient to Linwood Cemetery, with electric cars passing frequently.
N. METTEL, Dubuque, Iowa.

FOR SALE—Well established and centrally located florist business, including residence, lot 100x134, greenhouses, boiler, etc., and choice stock, in a city of 50,000 population. Reason for selling, death of late proprietor. A splendid opportunity for a man of small capital. For further particulars address,
FARMER & FARMER,
Solicitors for administratrix, Hamilton, Ontario.

WANTED.

An active business partner with capital of from $3,000 to $5,000 in Greenhouse and Seed Business. A fast growing northern town of 30,000. Flower business quite new in the locality. A large and rapidly settling territory to be supplied from this point with seeds, plants and flowers. Eight or ten towns of 4000 or 5000, and a great number of smaller places are tributary to it. On application from a practical florist with the above capital, catalogue for 1892 will be sent, and full particulars given. Change of business in July or August. Address
NORTH, care American Florist, Chicago.

WANTED.

As head porter and packer in a large Seed Warehouse, an active, sober, intelligent man. To such, a good situation is offered. State experience, references and wages expected. Address **H. P.**
Postoffice Box 2449, New York City.

FOR SALE—Greenhouse Fixtures.

94 Windows—several uniform sizes; 18 windows—odd sizes; all painted and in good condition; containing about 2,400 feet 8x10 glass. Also water heater and about 850 feet iron pipe with connections and valves. Must be sold to close out business. A splendid opening for a good greenhouse commanding extensive sales of cut flowers and designs.
The above fixtures will be sold cheap—at a single sale or in parcels to suit purchasers. For further information, apply to **H. PFUND,**
Executor of Fred Scheibel dece'd. Madison, Wis.

FOR SALE.

Nine greenhouses, containing 16,000 feet, of glass, with 8 lots of land, each 40x175 feet elegant dwelling with 11 rooms; barn, wagons, cart, horse and harnesses. The above property is located in one of the most beautiful western cities, within 5 miles of the city hall, within one square of electric and cable cars: the same will be sold cheap, as the owner is not able to run the same himself. The above houses have only been built 5 years; modernly constructed, 12x18 double thick best quality glass; heated by steam; abundance of water both from wells and cisterns. They are filled with palms, ferns, roses, carnations and bedding plants of all descriptions and all will go with them. Address
J M, care American Florist, Chicago.

FOR SALE.

Nine greenhouses containing about 16,000 feet of glass, ½ oest double glass; all houses rebuilt 4 years ago; heated by hot water—use city water for watering—2 acres of land, 1 brick dwelling house with 8 rooms, 1 frame house of 4 rooms, stable, horse, harness, wagon, etc. The above property is located in one of the best commercial cities of the west, with a population of over 60,000, and within 1¼ miles of city hall; electric cars pass every 6 minutes direct to city hall and Union depot. The greenhouses are well advertised and enjoy a good patronage at home and from abroad, and now contain a good stock of cut flowers, decorative and bedding plants. Poor health causes owner to retire from business. Would also be willing to sell greenhouses and stock and lease grounds and one dwelling house for a number of years, with privilege to purchase at a fixed price when lease expires. A bargain to a man with small capital. Address BUSINESS,
care American Florist, Chicago.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

NEW YORK.—There is likely to be a shortage next year on some varieties of vine seeds, and white onion seed and pickling cucumbers is hard to get, and Stowell's evergreen corn is quoted by the trade as high as $3.50 per bushel. In many instances growers have sold so short that they are not prepared to increase contracts. Sweet peas, common sorts and mixed, have not shown the shortage which was anticipated early in the season. Stocks have been well cleaned up, however, and no white can be found. Caladium bulbs have sold unusually well, and the larger sizes are sold out. Few tuberose bulbs have been seen in the market this season that have been sound, all showing more or less decay. Some experts in the south are quoted as stating that the rot is an epidemic of the same nature as the potato rot, and that these bulbs must be grown for a time in a different locality and under different conditions in order to get rid of the trouble. White Roman hyacinths of the largest size have been sold so close already that those houses who did not place large orders early are sold out and will accept no more orders for that size. There is no prospect of an overstock of large Romans for some years to come.

SOME TIME AGO I wrote to Uncle Jerry Rusk for something nice for agriculture. After waiting two months I received the following: 1 pkt. Livingston's Perfection Tomato, 1 pkt. Hubbard Squash, 1 pkt. Radish French Breakfast, 1 pkt. Radish Purple Top Strap Leaf. Were they not liberal? I suppose these must be very choice as that is what I sent for. I presume that I will plant them as I happen to need some radish and squash. I call it a poor seed store that sends these varieties out for novelties. LONG ISLAND.

THE TENTH Annual Convention of the American Seed Trade Association will be held in Hartford, Conn., June 14 to 16. Headquarters at the Allyn House. An interesting programme which was prepared at the January meeting of the Executive Committee will be carried out. Efforts are being made to secure special railroad rates and if successful, members of the Association will be notified direct.

COLD, rainy and unseasonable weather has added further injury to the mail and counter retail seed and plant trade in addition to the discouraging April business.

YOU CAN never invest $2 to better advantage than in a copy of our new trade directory and reference book.

With Short Span to the South.

I notice in the Chicago notes in the FLORIST a report of Mr. George Miller's proposed experiment in building houses of three-quarter span style with the short span to the south. This style of building is not new. The original buildings of this style were erected by me nearly two years ago, and they have been very successful. Mr. Deuster, of Milwaukee, last spring adopted my plan and it was so satisfactory that he is now building seven more houses of same style. Mr. Miller called upon me and examined my houses and also visited Mr. Deuster and it is our success that has induced him to try this style of building so the step he is taking can hardly be called an experiment. This style of building has already been demonstrated to be the best for cut flower growing in winter. H. STAEPS.

Elm Grove, Wis.

A "Crazy" Canna.

One of our local papers announces with a flourish that a florist here has a "Crazy Canna" that has been named "Woodlawn Pet," and goes on to say that "it is not the old ordinary Crazy Canna, as instead of being bordered with yellow it has a streak in the center." But the "organ of progress" fails to state whether the plant is dangerous or may be allowed to run at large. It ought to be locked up pending an investigation. ED. KIRCHNER.

TRADE DIRECTORY

—AND—

REFERENCE BOOK

FOR 1892

IS NOW READY.

It contains an accurate list of the Florists, Nurserymen and Seedsmen of America; the statistics of the Florist, Nursery and Seed Trades from the last U. S. census; a complete list of all National and local Trade Organizations, with just the information about each that you want convenient for reference; alphabetical lists of Roses, Chrysanthemums and Carnations, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

You can't afford to be without this book.

PRICE $2.00 PREPAID.

American Florist Co.,

322 Dearborn St., CHICAGO.

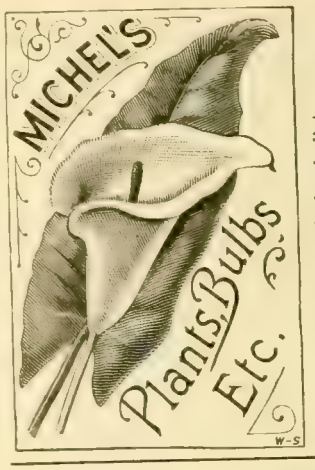
Michigan Floriculture at the World's Fair.

The first meeting of committee on floriculture of the State of Michigan was held at Lansing May 10, there being present C. L. Whitney, Muskegon; S. Taplin, Detroit; R. H. Mann, Lansing; H. G. Thornton, Ionia. John Irvine, Bay City, was absent.

It was proposed and strongly advocated by Chairman C. L. Whitney to exhibit a collection of dried specimens of the flora of Michigan, to send out circulars to the public schools through the state and get principals, teachers and pupils interested in the matter, and set them to collecting, drying and arranging such a collection of the plants in their vicinity. Then to bring the whole together, sort out the chaff and make one general collection, correctly named and arranged in proper form to be available to those who are interested in such matters.

Second proposition: To secure a suitable place for a collection of living specimens of the same class of plants.

Third proposal: To get the florists of Michigan to make an exhibit of plants and cut flowers for each week of the season, using such plants and flowers as grown by florists, and put them on exhibition for one week, selecting the week when they can be had in the greatest perfection. For example, one week for azaleas, one week for pansies, pelargoniums, etc. Later one week for gladiolus, one week for asters, etc. If response is favorable more definite arrangements will be made at next meeting.



Fourth: A notice to be sent to all florists in the state as to the chances of making a general exhibit for the whole season of palms, dracænas and orchids, including a general collection of stove and greenhouse plants. Also to growers of specialties as to what they can do or are willing to do.

Chairman of committee instructed to prepare circulars for principals of public schools on dried specimen matter. Circulars to be prepared and sent to all florists on the matter of one week exhibit of each flower in season. Also as to what can be done in the way of a general collection of plants for the season. Then to find out if provision can be made at World's Fair for what can be done by the schools and florists, in way of taking care of such exhibits.

Next meeting will be called after sufficient time has been given for responses to circulars issued.

OUR CUT FLOWER BUSINESS
Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

	Per 100
Dahlias, single tubers	$ 3.00
Tuberous Begonias, from the finest European collections	5.00
Clematis, pot grown, 8-inch pots	40.00
Hydrangea Thos. Hogg, we have a lot in the right condition for Decoration day, 6-inch,	20.00
Rose, American Beauty, splendid clean young stock	8.00
Fuchsias, all the standard sorts ready for spring sales, 4-inch	8.00
Washingtonia Robusta, this is a splendid easily and rapid growing palm, it takes but a short time to make a good specimen. Should be in every greenhouse. We have a large lot of it in 4-inch pots, and in order to reduce stock will sell a quantity at	20.00
Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in stuff in fine condi ion	100.00
Chamærops Humilis, will sell a quantity of those for a short time, 4 inch stock,	15.00
Marguerites, large flowering white, bushes 2½ to 3½ feet high	15.00
Carnations, 5-inch, in bloom	15.00
Callas, 5-inch pots	9.00
" 6-inch pots	11.00
" 8-inch pots	15 00
" strong clumps from bed, not divided	25.00

Chrysanthemums. We have a large stock of the select varieties that are most desirable for the commercial florist. Give us a list of what you want in Chrysanths and let us make you a price on it.

Cut Flowers.
For the balance of this month we offer

ROSES—Brides and Mermets	3 00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this Stock guaranteed A1. No charge for packing.

Vases in Iron, Rustic, etc., best makes, will sell for a song to close out. Window Boxes, we still have a quantity left, if you want any this is the chance of a lifetime. Price 1c. per lineal inch in length.

ADIANTUM CAPILLUS VENERIS—
The coming Adiantum for the cut flower trade. The reasons why because it is
Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.
Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.
Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.
In buying see that you get the true variety, as it has many aliases. If you are short of room now we will book your order and ship any time up to May 15th. Price, strong plants, $8.00 per 100.

JOHN IRVINE CO.,
BAY CITY, MICH.

ROOTED CUTTINGS.
CARNATIONS.
LIZZIE McGOWAN. More good and fewer poor points than any white Carnation ever sent out. Strong well rooted cuttings at $2.00 per 100.
PANSIES. Good stocky little plants in bud and bloom, at $2.00 per 100, or $15.00 per 1000. 250 at 1000 rates. Almost every florist knows how good the strain is.
CANNA. Emile Leclaire, as pretty as an orchid, yellow with brown markings, $3.50 per 1000.
L. B. 338. ALBERT M. HERR, LANCASTER, PA.
Mention American Florist.

CARNATIONS. Finest NOVELTIES of the year, and best Commercial varieties.
COLEUS. Best assortment in the country. All the good Bedders. "JOHN RALPH." The new Fancy Coleus is a gem. Fine color and foliage. Pot plants, 6 for $1.

HYDRANGEAS,	5.00

DRACÆNAS Indivisa,
Latania Borbonica.
WILLIAM A. BOCK, North Cambridge, Mass.

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of "Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100.

PRICE OF STAR OF 1891. $45.00 per 100.

Colored plates of Madame Crozy mailed free. Can be supplied in any quantity. Trade lists on application. Address

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON, NEW YORK.

Paterson, N. J.

Among the many flourishing towns in the vicinity of New York city Paterson makes a most encouraging showing for the trade; all the dealers there report brisk and increasing trade. Easter was the busiest season known, though, unlike many other places, cut flowers went ahead of plants.

There is an increasing trade noted in fine shrubs; to meet this demand Joseph Towell has just been importing a lot of fine ornamental maples direct from Japan. Mr. Towell has recently moved into a handsome new store to keep in line with his large trade. Among things noted at his place was carnation Alegatiere in fine condition; Mr. Towell has grown this for several years and finds no other scarlet suits him so well.

At Mr. Chitty's there was a bewildering array of carnations, Lizzie McGowan being much in evidence. Mr. Chitty is increasing his carnation houses, intending to drop other stuff for his specialty.

Another Paterson firm is Thurston & Sceery, whose greenhouses are at Ridgewood, N. J. They have a brisk and increasing trade, doing some fine decorating during the winter months.

It is a noticeable fact that all the growers around New York are dropping Asparagus tenuissimus entirely, only growing A. plumosus, which, well grown, sells profitably all the season.

Lime Water and Eel Worms.

I noticed the article in the FLORIST of April 7, page 794, concerning the use of lime in rose soil for the destruction of eel worms. My formula is from Peter Henderson, as follows: One peck of fresh lime to 50 gallons of water, stir well, when settled drain off the clear water and saturate the soil with it. I used it in my rose benches in late summer, thoroughly soaking the soil, eight or nine days apart, until it had four applications. The roses appeared to improve under the treatment.

But if the trouble spoken of appeared in the dark days of winter there would have to be considerable judgment used in applying the lime water just at the time the soil is almost dust dry, digging to the bottom of the bench to ascertain the condition. In treating solid beds it would certainly have to be done in the summer.

As to gas tar on pipes, I would use lard oil when the pipes were not in use for a few days; coat them thoroughly, leaving it on a week or ten days to soften up; then wash off with refined kerosine. The coal oil will soon evaporate.

Nashville, Tenn. W. D. BUCHANAN.

C. C. ABEL & CO., P. O. Box 920, New York.

Please mention the American Florist every time you write any of the advertisers on this page.

An Opinion From England.

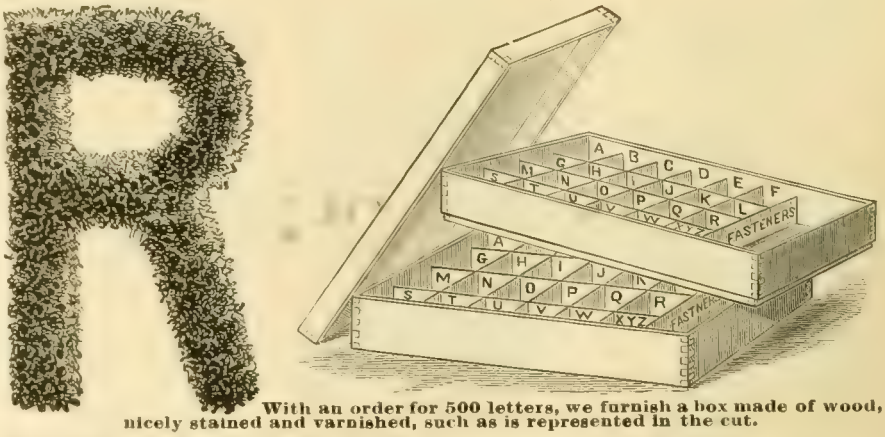
The editor of the London *Horticultural Times* gives a very flattering notice of our new directory and reference book in a recent issue of his paper, and in a letter under date of April 14 he writes:

"Your directory is a very useful and admirable production, and from the valuable nature of its contents, to the classes catered to, I am convinced that it merits the great success it has secured. Certainly no florist, nurseryman or seedsman either in the United States of America, Canada or this country can afford to be without it, in addition to which it is produced in a thoroughly artistic style. We have nothing like it in England."

Dalmation Powder.

After the publication of Mr. R. T. Lombard's essay, in which he strongly recommended "Dalmation Powder" as an insecticide, we have received numerous inquiries as to where it could be obtained, and in response to a note Mr. Lombard writes:

"This powder is sold by most all seedsmen and druggists as 'Persian Insect Powder.' It is sold by our grocers as 'Dalmation Fly Powder.'"



If you have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Wholesaling to Retail Buyers.

ED. AM. FLORIST:—Recently I had a plant decoration to make for a wedding. I also expected to furnish the cut flowers, but was told after I gave my prices that they could get them at wholesale prices at ——. As I bought my flowers at the same wholesale house I was "knocked out." To satisfy myself I sent to the same commission man and got his prices for that day and compared them with the bill the party got from said house and they were just the same. I wrote to the house for an explanation, but received no reply. Now, such an imposition as this on the trade by the wholesaler is uncalled for. I would like to know if the AMERICAN FLORIST will offer us any protection from such unfairness.

Cochran, Ind. S. HUMFELD.

[The party complained of is not one of our advertisers and we do not believe that any of the houses whose cards appear in the FLORIST would be so short-sighted as to enter into competition with their own customers. Such a policy is the height of foolishness—to say nothing of higher considerations—and is sure to react disastrously upon any one unwise enough to follow it. We predict that the above noted transaction will cost the wholesaler in question much more than the loss of Mr. Humfeld's trade, and we should imagine that the loss of even one wholesale customer, whose trade might otherwise have been held for years, would far overbalance any good that may have accrued, either directly or indirectly, from the sale made.—ED.]

DO YOU WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

IF YOU have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

Park Embellishment. Its Character and Use.

[*Read before the N. Y. Florists' Club by John R. Johnson, Supt. Parks, Paterson, N. J.*]

In dealing with the question of "Park Embellishment, its Character and Use" in this paper, the time at my disposal will not permit more than a cursory glance, in considering the effective, ornamental and useful decorating of a public park. So many and so varied in character are the requirements necessary for supplying the public needs for comfort and pleasure and instruction, it will be impossible to enter into all the details. As I have said before I will deal principally with its most essential principles.

In selecting a piece of land for a public park the idea conceived is to provide for the healthful recreation of all classes of citizens from the poor to the rich, a place where the toilworn artisan or tradesman, the cramped office clerk and the weary housewife, may repair to enjoy a breath of free, pure air; to inhale the fragrant perfume of beautiful flowers and to refresh and strengthen his toilworn senses with a glance at the bright colors of nature. This fact of what the place was originally intended for should be borne in mind and should guide somewhat the arrangement and decorating of the grounds. It will then be obvious that in order to carry out this idea great care should be taken in the arrangement; that everything which would be calculated to give the park a cramped, weazened appearance and character should be avoided, and free access should be readily obtained by means of good, wide, shady avenues and roads to all points of vantage. Probably one of the most important features in the construction of a park is good, solid, wide roads, and these being made essentially for use rather than show, should be so constructed as to be firm, smooth and dry at all seasons of the year. Carriage roads should as far as it is possible intersect with all the choicest places and in every case should be made to accomodate themselves naturally and unobtrusively to the shape of the ground, avoiding all steep and precipitous inclines. The grade should be so arranged as to alternately ascend and descend, offering thereby every facility for rapid and easy driving. So many things are to be studied in order to provide for the various notions of enjoyment entertained by the people interested. Some are of an athletic disposition, delighting in an ardent participation in all the manly sports of the day. This taste may be catered to by setting apart a corner of the park for a ball ground, cricket ground, etc. Others again delight in that quiet secluded spot where nature enchants the creature man; a place where they may enjoy in quiet contemplation the perfect forms of the trees and shrubs, the brilliant colors of the foliage and the various characteristics and fragrance of the choicest flowers. It should be a feature of the arrangement to separate these two as widely as it is possible to do so in order that the noise and naturally wild enthusiasm excited by an interesting competition of rival athletes should not interfere with the quietude of the student for knowledge or the calm relaxation from business toils and cares sought by those residing amidst the noisome, exciting whirl of daily city life. This leads to a consideration of the arrangements which may be made with a view to effectually separating the two. One very important thing that presents itself in connection with this consideration, and stands second only in its importance to good roads, is cool shade. Avenues of trees interspersed with irregular groups should run along the sides of all the drives and paths, shielding visitors from the burning rays of the summer sun. Great care needs to be exercised in the planting of trees, whether singly or in groups, so as to arrange them for picturesque effect. Besides the shade the object and use of planting is of a twofold character in its improvement and ornamentation of grounds. There is its use in concealing boundaries; in this respect by a judicious system of arrangement groups may be planned so as to present a pleasant interruption to the view and without seeming to terminate abruptly convey the impression to the mind of vastness of extent. The various points made by the curves in the roads or walks will present advantages for this purpose. Of course much depends on the character and elevation of the grounds surrounding these respective points. Various angles may be struck where groups may be advantageously placed, in order to preserve a fine piece of scenery from view until, the visitor turning a corner, the whole beauty of the scenery opens up to view, creating a novel and pleasing impression. Then there is its use in hiding from sight disagreeable views; the blocking out of range of vision outhouses, hideous fences, or any undesirable surroundings that may be found in the way and which it is impossible to remove. The grounds set apart for the various athletic games and children's playground should be effectually hidden from the principal points of view, away from the main entrances and drives and away from the choicest pieces of scenery that the park may contain. Groves of trees may be planted that would satisfactorily accomplish this, affording at the same time shade, and would in no way detract from the general appearance. The old adage of putting all the best oranges on the top of the box appears to me especially applicable to the park. Contending as I do that the first impression created on the mind of the general public is generally a lasting one, there-

fore I recommend a little extra care used in beautifying the entrance. Anything of an unattractive character should be removed, as far as consistent with the general surroundings. On each side of the drive greeting the visitor on entering should be arranged a shrubbery border tastefully planted with choice evergreens and intermixed with flowering shrubs, with here and there in the background a specimen deciduous or evergreen rearing it symmetrical and shapely head. A few herbaceous plants might be distributed through with striking and pleasing effect, and if care and judgment were used in the selecting of the various kinds in their order of flowering, a continual succession of flowers throughout the whole of the spring and summer months might be insured. A well kept turf edging, say from four to five feet wide, would give a nice finish to the whole. Following on beyond these borders might be located at irregular intervals a few choice specimen evergreens, conifers or deciduous trees, these ultimately merging into the general natural character of the park. A nice stretch of ground should be selected having pleasant surroundings and tastefully intersected by walks to display individual specimens and where effective groups might be displayed containing the choicest of evergreens and flowering shrubs. These should be so grouped as to show each individual plant or kind. Here could be located borders for herbaceous plants, and no park worthy of the name should be without a complete collection of the most useful kinds of this estimable and beautiful class of plants. In regard to the planting of trees for effect, judgment must be used in order to produce harmony and contrast. In many instances a more pleasing feature is procured by forming groups entirely composed of plants of the same species; the harmonizing of color and the similarity of form in habit and growth oft give more pleasure and appear more natural than when mixed with other kinds. However, in everything that is done in the way of planting on the formation of ground nature should be reproduced as much as possible. Every shrub and plant should be correctly named with botanic as well as common name, so that visitors may be doubly interested in admiring their beauty and being able to learn what they are. Where it is the good fortune to have a stretch of water in the park an additional enchantment is imparted to the scene, for there is nothing that contributes more to the beauty of the landscape than a good body of water, and in its tranquil depths may be grown the various forms of aquatic life so interesting not only to the experienced professional but to the casual visitor. The beautiful lotos, the fragrant nymphæa, the graceful papyrus, the curious floating eichhornias, with their hyacinth-like flowers of delicate hues—these with a host of others equally as pretty and curious impart to the whole an appearance of tropical grandeur. Another valuable contribution towards the embellishment of a park is the construction of a piece of natural rock-work where it is possible to do so. The banks of the lake oft present a suitable position to locate this, the calm water and the rugged sides of rockery, when planted with suitable plants such as kalmias, rhododendrons or the like, producing an harmonious and pleasing contrast. In conclusion I would say that I know of no place that offers more facility for the education of the masses in the knowledge of horticulture, more calculated to elevate the moral element in mankind, more likely to inspire the people with a desire to study the beauties of nature when combined with art, and to reproduce around their homes what they have seen there. No city park is replete without a complete collection of all the choicest and useful trees, shrubs and plants that are hardy or that may be preserved with a little protection during winter. The question of cost is of no importance as compared with the pleasure and instruction they impart, and it is moreover a credit to the city and its residents, and, handed down to generation after generation, a monument of their ancestors' forethought and wisdom.

Packing Roses.

This is a matter of more importance than many suppose, particularly when the plants have to travel long distances. There are two main considerations to bear always in mind; first, that the plants shall arrive at their destination in the best possible condition, and second, that the package be as light as possible, for the express companies now charge full first class rates on all shipments of plants, and double first-class rates on any packed without a firm cover over them, as they claim such cases take much more room, as nothing can be placed on top of them.

The style of packing most generally in use for this class of plants, is what is known in the trade as close, tight packing, and for all seasons excepting during very warm weather it is very much the best. Take boxes about the size required to hold the number of plants ordered; but these should not as a rule be more than eight inches deep. If the weather should be very cold, carefully line it with two thicknesses of good stout paper, then a thickness of cotton wadding, covering this again with another stout course of paper, taking care that all joints are well overlapped. It is best to fold the sheets of paper so that each is slightly longer than the sides or ends, press them in close to the corners, then cover the bottom in the same way; this done, the box is ready to receive the plants; these should first be wrapped singly in a piece of brown straw paper of suitable size, to go twice around the ball of earth and covering at least a part of the foliage. Commence placing a row of plants across the end of the box, with the tops facing toward the center of the box; place each ball as close to the next as possible without pressing the soil out of shape; this done, commence another row across the box, laying them as closely to the first row as possible; the paper which partly covers the foliage will protect it from injury. After placing two, three or four rows across, according to the size of the plants, commence the next row by reversing the plants, laying the tops over the balls of the last row and continue doing so until the whole layer is completed, and should there be any small space at the finish not quite filled up, pack this tight with a little moss, excelsior or like material. Cover this bottom layer over thinly with the same class of material, then commence with the next layer at the same end the bottom layer was finished at, and pack exactly as the first was done, finishing off in the same way, and continue doing so until the box is quite full, which for two-inch stock will be about four layers of plants; then cover with paper, etc., the same as the box is lined with, bringing the side papers over on top of this again, which, when the lid is nailed on tight makes a very close, warm covering. Before the covering is put on, and with the last plant put in the box, be sure a label with the name of the variety plainly written on it is placed with this plant. Where several varieties have to be packed in the same box, each and every variety should be distinctly labeled, and a sheet of paper differing in color to the general packing paper placed over the last variety packed before commencing with another. I prefer a sheet of newspaper doubled for this purpose, allowing it to overlap considerable of the last sort placed in the box, which clearly indicates to the person unpacking them, that there is a division intended here.

As soon as all danger of frost is passed, this lining of paper, etc., can be reduced, and in warm weather is better dispensed with altogether. For very long distances in extremely cold weather, it is advisable to put an inch of dry sawdust all around the outside of the paper lining, or rather, between it and the box; this will effectually stop any frost from getting into the plants, even if exposed for two or three hours to zero.

As the season advances to July or August, there is considerable danger in packing plants tight as above, on account of their liability to heat. To avoid this, we prefer to take a box deep enough to allow the plants to stand upright in without breaking their tops; wrap each plant singly as above, then commence at one end, stand the plants upright, and where they are large plants placing two rows, one plant resting on and standing between two of the bottom row. A little practice at this, and the packer will soon become proficient in placing these securely. Between every two tiers of plants thus packed, a strip strong enough to hold them should be nailed. Continue placing the plants and strips in the same way until the box is full, nailing another strip in securing the last row tightly. Nail strong strips over the top and mark the box "this side up." By this means, plants can be shipped long distances in a perfectly fresh condition and secure from damage, because the foliage can get fresh air and will not get bruised or pressed out of shape. If the packing is carefully done they cannot get out of place in the box. But when packing plants this way, never have a bud or bloom on the plants or they may get moved out of the box long before they reach their destination, and oftentimes the plant as well as the bloom. This means losing the whole package and lots of trouble all around. If necessary to ship plants in bloom, then the whole must be protected.

Shipping plants by freight, particularly for long distances, is not advisable excepting for large plants that have been previously somewhat hardened off to enable them to stand for one to two weeks without water, and even then they often suffer more damage than the cost per express would have been.

Before commencing packing at any season of the year, it is all important to see that the soil in the pots is in the right condition, namely, nice and moist without being saturated with water; if they are not so, or rather if they are on the dry side give them a good watering at least three or four hours before packing,

FIRST PRIZE GROUP OF ORCHIDS IN BLOOM, AT THE LAST EXHIBITION OF THE PENNA. HORT. SOCIETY, PHILA., SHOWN BY EDWIN LONSDALE.

or, better still, water well the evening before and then pack them early the next morning, because if too dry the earth will shake off and leave the roots bare and broken. On the other hand, if they are packed too wet the soil becomes mud, and is about as bad as can well be for the health of the plants—and the reputation of the shipper. JOHN N. MAY.

A Trip to Nyack.

Nyack-on-Hudson is essentially the home of the Beauty and La France; though there are plenty of other flowers grown there its distinction rests on the two roses named.

The locality is now becoming noticeable for the number of growers, nearly all of them supplying the cut flower trade. Some few years ago when we first began to hear of the Nyack growers it was suggested that the soil peculiar to the district was the chief factor in the extraordinary success attained with some particular varieties, but we have no actual warrant for believing this. It takes the right men to grow the plants; without them the soil would be a secondary consideration. Confining themselves to one or two varieties with which they gain an unqualified success they have a better chance than where the same ability is spread out over too great a space.

A. C. Tucker's place is thoroughly well known, and a recent visit there proves that its distinction rests on a very solid basis. One may say that the entire place is given up to the Beauty and La France, for though a few other roses are grown it is more for the sake of keeping stock than for extensive cutting.

During the past winter the Beauties at this place have been remarkable for strength and luxuriance; many could be cut with eight foot stem if desired, and at this late date they are strong and clean as one could wish. It seems a pity to root out such stuff, but they are never carried over, experience proving that it is more satisfactory in every way to replant each season.

The La France show the same luxuriance as the Beauty, making strong straight wood with abundant foliage. They are grown under the same condition as the Beauty. The soil used some time ago was quite different in appearance from that used now, being very dark and suggestive of reclaimed swamp. The present soil is light in color, extremely fine and smooth, and suggests detritus from the adjacent mountains. It is prepared about the middle of April and then left until planting in June. This spring the soil heap is turned into a salad bed, the top being sown with lettuce and radishes. One of the houses here showed a curious illustration of the virtues of new soil as opposed to old. Happening to run short of new soil a few feet of the beds in one house was filled with old. Four different roses were in the four benches, the same difference in soil extending clear across the house. The Beauties and La France showed no difference whatever, but with Perles and Mermets the difference between the plants was so marked that one could tell to an inch where the new soil ended and the old began, the Perles seeming to suffer especially from the worn out soil. It was a very plain object lesson as to the influence of soil.

An excellent idea at Mr. Tucker's was the vault for storing flowers. It was built extending outside from the shed, about eight feet deep, brick lined and ventilated by two pipes at the top. No light is admitted except when the door is open. On a hot day it was cool as a chill room, while in very cold weather the upper door leading into the shed is opened to prevent injurious cold.

A few Hoste were to be seen here, but Mr. Hogan, Mr. Tucker's grower, says his experience gives him the opinion that it is especially a spring rose, doing finely at the present time, after being idle all winter.

One of the newer places in Nyack is the Blauvelt establishment, now in its third or fourth season. Mr. Blauvelt gained experience in handling flowers with W. S. Allen, going into growing since. His houses are of improved construction, heated by steam according to the same system used at J. H. Taylor's. Like Mr. Taylor, Mr. Blauvelt believes fully in the desirability of steam for this purpose.

Beauty and La France are the chief roses grown, proving here, as at Mr. Tucker's, the most satisfactory and remunerative. Some of the Beauties were carried over from last year, but Mr. Blauvelt does not find this so satisfactory as the yearly planting. One house has been filled with Gontier the past winter, but in spite of the excellence of this rose in its class it does not pay so well as many others in the New York market.

Perle does well here, but though ready to test other sorts Mr. Blauvelt is giving more attention to La France and Beauty than any other sorts.

The largest place in Nyack belongs to Mr. DePew; there are 16 houses. This is not, however, exclusively devoted to roses, carnations are also grown, and there is a large business in bedding stuff. Mr. DePew states that his bedding trade is larger this year than ever before, running largely in excess of the usual supply.

This encouraging statement is repeated by most dealers in bedding stuff. Ferns

and smilax are also grown here; in carnations there was a very attractive house of Hinze's White. In roses the chief quantity was in the Nyack specialties; they expect to plant some 8,000 Beauties this season. The same excellence is maintained here as at the other places in the district, both Beauties and La France showing great vigor.

Another attraction at this place was a mushroom house, formed in the space between two greenhouses. It was built like a long shed with three broad shelves down each side forming the beds and has proved a very satisfactory investment. This place was formerly all in grapes, which were grown very extensively on the sloping hillsides along the Hudson; from grapes Mr. DePew went into bedding plants, and finally into rose growing.

Mr. Foley became well known as a successful rose grower while at Mr. Tucker's, and it is needless to say that his skill has not deserted him since he went into business on his own account. He began with five houses of first class construction, all devoted to roses; this year he is putting up three more. With small exceptions he devotes his skill to the Beauty and La France, and the result could not be beaten any where. This is especially true of the Beauty; the writer has seen few plants to approach Mr. Foley's, and never seen them excelled. There is no secret in their culture—except the grower's skill. They are planted about June 15 and are usually flowering a month or six weeks later. The houses give them plenty of head room, and the plants make the most of their opportunity; they throw up tremendous shoots, all from the bottom, making plenty of stem, and the flowers are worthy of the plants.

Mr. Foley grows a few Bennetts; his new houses are entirely for Beauty and La France.

Very few Albanys are to be seen at Nyack, in spite of the plentitude of La France, and very few Brides or Mermets. Not that there is any dissatisfaction with these flowers, but the growers stick to a sure thing. None of the hybrid remontants are grown at all. We may notice, year by year, a greater disposition on the part of the trade to run to specialties, and the Nyack roses are an apt illustration of this fact.

EMILY LOUISE TAPLIN.

Proper Temperature for La France.

Will you please propound the question to the fraternity, through the FLORIST, what is the proper temperature at night in winter for the La Fance? J. K. A.

THE FEELING in favor of a national rose society grows apace and the formation of such a society, on broad lines, at Washington, is already assured.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date or introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

IN LAST ISSUE, through an incorrectly made change in the advertisement of the John Henderson Co., they were made to quote their 2½-inch tea roses at $10 a hundred, when the price should have referred to American Beauty alone, and the price on the tea roses should have been $5 a hundred. The prices are correctly given in the adv. in this issue, which appears on page 963.

A Few Notes On Insectivorous Plants, With Special Regard to Nepenthes And Their Culture.

[*Read before the New Jersey Social Florists' Club by John E. Lager.*]

Setting out with the idea of insectivorous plants we ask, what is an insectivorous plant? Simply a plant that devours insects, and then according to the laws of nature they in their turn become and constitute a certain amount of nourishment to the plant; we see, for instance in the Drosera rotundifolia, the little insects often struggle for life if they happen to alight on one of the leaves where a sticky fluid is secreted, which with the droseras is the chief attraction for the insects, and there they remain, and when decomposed the substances are absorbed by the leaves. It cannot be by the roots as the insects never come in contact with them. Droseras supplied with animal food become in every way more substantial than individuals from which it is withheld. The "Venus Fly Trap," Dionæa muscipula, resembles the droseras in having a rosette of radical leaves which are about an inch and a half across, consisting of two plates lightly hinged together and bearing individually a resemblance to the human hand, being constituted as it were of projecting fingers; on the surface however, there are little green-haired bodies, and when the trap is set the two palms are spread out horizontally. The instant an insect touches the green hairs upon either side, these fold together upon the hinge, interlocking their fingers as when we clasp our hands, and the victim is imprisoned. Ordinary butterflies are thus captured, when the plant is cultivated as is now very often done in greenhouses.

The sarracenias are herbaceous perennials, natives of the swamps of this country. The leaves, which grow in tufts, have their margins brought together and united in such a way as to convert them into vessels several inches in length, at least an inch in diameter at the top and capable of holding water. The rim is worked like the over-casting of a buttonhole, and, accessory to the general design, there are numbers of short stiff bristles pointing downwards. Fluid, partly secreted by the plant itself, is contained in these curious cups for about half the distance upwards; it is attractive to insects which descending the inner wall cannot possibly get out again, and are drowned by thousands. The flowers of sarracenias are large, red or yellow.

In the extraordinary genus nepenthes, natives of the islands washed by the Indian Ocean, and now represented in our greenhouses, the contrivance though somewhat similar to that of the sarracenias, has features of its own. The plant is in every instance a weak straggling climber, requiring the support of bushes, and then reaching many feet, perhaps even many yards; the leaves are six to eight inches long and in outline elliptical; the midrib is forward and becomes a sort of vegetable carried wire which turns spirally two or three times, and then leads on to a curious pendulous pitcher most elegantly balanced, so that the mouth is always uppermost and the fluid in the interior safely preserved from running out. Here there is a genuine lid, distinctly articulated to the margin of the pitcher, and, while the latter is young, adherent to the rim, though when once lifted into the erect position, it never afterwards shuts down. The rim is worked like that of the sarracenias; there is a similar provision of bristles to prevent the escape of the insects. Long before the lid loosens itself from the rim of the pitcher, the latter may be observed half full of fluid secreted from the tissues and plainly proving that the bygone idea that the nepenthes was a contrivance for collecting rain was purely fanciful. The flowers of nepenthes are greenish and unattractive. "Which part of these plants constitute the true leaf" is a question that often has been asked. I once heard a botanist lecture on the subject, who contended that the very lid or orifice is most likely the veritable leaf. What we generally understand to be the leaf is believed by many to be a kind of phyllodia, as in a great many acacias, where in several instances the leaves are emitted from the phyllodia, and as the plant develops the leaves fall off and the phyllodia itself performs the functions necessary for the plant independent of the leaves. We see the same in the nepenthes to a certain extent, for if we cut the pitcher the rest of the leaf does not seem to suffer in the least, but continues its functions and lives for a considerable time after.

From a practical standpoint, there are few plants more ornamental and of a more striking appearance than the nepenthes when properly treated and grown to perfection, although there are few places where they are seen to their best advantage, owing to the fact that in many cases they are grown and intermixed with other plants, and consequently their treatment and the temperature in the house has often to be moderated so as to suit other plants at the same time. Nepenthes require an abundant supply of water at their roots as well as on their leaves during the growing season, when the temperature may run up to 80° to 90°, provided they are shaded and the atmosphere in the house charged with moisture. They require but very little air, and ventilation should only be resorted to when the temperature runs up extremely high, as they are very sensitive to excess of air or draught or from want of water. The pitcher is the most sensitive part, especially the upper edge or rim which soon decays if these requirements are in the least neglected.

The best time for propagating them is in the month of December or January, as by that time the shoots are more matured than would be the case earlier, and if they are propagated late in the spring when the (old) plants have started to grow the wood will be too soft, and, another disadvantage is that they will then be considerably retarded and liable not to produce their pitchers before the late autumn, and then but imperfectly developed specimens.

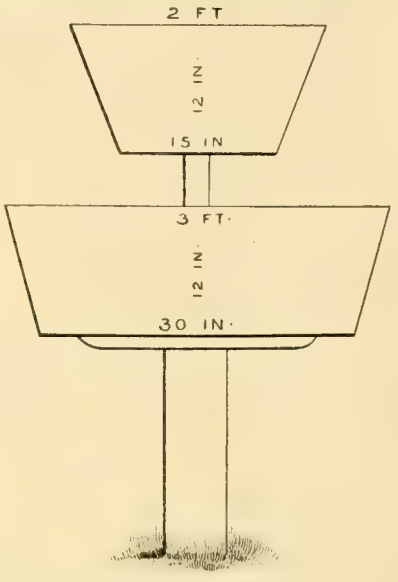
Success greatly depends on the wood being as ripe as possible. Another advantage is that the cuttings taken at the time above mentioned, may be struck and potted up at an early date, and thus be ready for sale in the spring, if in a commercial place, or if in a private collection, be fit for decorating the house during the summer months.

Generally the cuttings taken low down on the shoot strike best, the top ones being the most difficult to root on account of their softness. The cuttings may be cut to one eye, taking care not to cut too near the joint, the single eye then being liable to decay. There are several methods of striking them more or less advantageously. By putting a layer of fresh sphagnum in the propagating case, and then small inverted pots on the top of the moss, the hole being made large enough to get the cutting through, just to hold it in position, shoots or cuttings with three or four eyes may be struck easily. I believe this is one of the most rapid methods

there is to strike them, but with the utmost care in potting, the roots generally get more or less bruised and thus their growth is checked. I believe thumb pots are to be preferred, using sphagnum and a little soft fibry peat, and plunging them in the propagating case or under bell glasses where they can be kept close in a brisk bottom heat.

When the roots appear they may be shifted into larger pots or baskets, and if they are struck in pots, they will not suffer from it but grow on rapidly and unchecked, thus forming nice plants in a short time. The compost for potting them should consist of soft fibry peat mixed with good living sphagnum, and a few pieces of charcoal in each pot or basket, in order to keep the compost sweet. An efficient drainage is essential at all times. Although they enjoy a liberal supply of water, it must not under any circumstances be stagnant, the leaves then assuming a sickly yellowish tint. The only exception I know of as regards the treatment, is N. distillatoria, which may be grown successfully in less heat than any of the others. It is just one hundred years since N. distillatoria and N. ambullacea were introduced.

I do not think it necessary to enumerate a host of species and hybrids. They are all more or less interesting, from the little slender growing N. loereis up to the grand N. Rajah and N. Northiana.



Vases and Vase Plants.

One of the great summer attractions of Lincoln Park, Chicago, is the large number of vases which by June are a pyramid of bloom and foliage and retain their beauty all summer long. The mall is lined with a row of these on each side, and the view down the broad walk with these vases standing in relief against the background of trees and shrubs, charms all visitors. These vases are now being filled for the summer, and the corridor of the park greenhouses is nearly filled with them, and thinking that the large number of our readers who make the filling of vases a part of their business would be interested in knowing the methods pursued here and that result in such magnificent pyramids of bloom and verdure, we induced Headgardener Stromback to talk about them.

Of the vases used, nearly all are of wood and made on the place. He takes no stock in iron vases, as they heat up so in the sun and burn the plants in hot weather. Besides iron vases are designed by men who have no knowledge of the requirements of the plants that are to fill them, and they generally are so shallow at the edges that it is impossible to have soil enough there to give the plants a fair chance for existence alone, to say nothing of doing well. The simple wooden boxes are far more satisfactory—and in these the plants grow so rapidly that they are soon hidden from sight anyway.

He is very particular about the preparation of the soil for vases and boxes. It must be of medium weight. If too heavy it turns into mud when heavily watered and then bakes into brick; if too light it does not retain moisture long enough. The soil he has is rather heavy so he lightens it up with a lighter soil obtained from another locality. To this mixture he adds one third well rotted cow manure —at least one year old. And when filling the vases he adds a generous lot of horn shavings (about a peck to a vase three feet in diameter and twelve inches deep). These horn shavings he considers much preferable to bone meal. They soften up and become available to the plants quicker than the bone, and the effect lasts all through the summer which is as long as needed. These shavings are torn up and mixed well with the soil before putting in the plants.

Nearly all the vases are of the style shown in the accompanying figure. The object of the upper box is to give the pyramidal form to the vase, and in late summer when the vines trail to the

ground the vase presents the appearance of a tall pyramid of foliage and flowers without any part of the vase showing.

For vase work he needs a quantity of large geraniums so each fall he lifts a lot of those that have been bedded during the summer, cuts them back and keeps them over winter for this purpose. The smaller geraniums used are of last fall's propagation.

Of course the filling of the different vases varies considerably, but the general arrangement is as follows: In the upper box, which is 2 feet in diameter at the top, 15 inches at the bottom and 12 inches deep, he uses some of the large geraniums, around these a mixture of silver leaved geraniums, Cinerarias maritima and candidissima, interspersed with smaller geraniums, then a few Calceolaria annua, double sweet alyssum, Verbena hybrida, Petunia hybrida, ivy leaved geraniums (these for immediate effect only as they do not hold out well all summer) and around the edge double nasturtiums (these also for immediate effect only), lobelias, and sometimes a few Marguerites.

In the bottom box, which is 3 feet across the top, 30 inches at bottom and 12 inches deep, the first row around the center is of tall geraniums, but not so large that they will over grow the center. Then follows much the same as in the upper box with the exception of the running plants. For plants to hang over the edge of the lower box he uses Maurandia Barclayana very freely. It makes a thick mass of foliage and flowers freely all summer long. Another plant that is used very freely in this position is the single flowered nasturtium (tropæolum). These grow rampantly and flower very copiously. German ivy (senecio) is also much used to add to the mass of foliage, as are the vincas, both green and variegated. And sometimes Lophospermum scandens is added—one or two plants in a vase. These are very effective, the gloxinia-like flowers always attracting much attention.

The vases when first planted require an even moisture, but when the roots of the plants have taken a good hold of the soil much more water is needed. And when watering the soil is soaked through so it runs through the bottom of the box. In July, August and September very large quantities of water are needed to keep the vases in condition. Then the vases are watered thoroughly every other day, and sometimes every day when drying southwest winds are blowing.

In the filling of vases it is certain that quite a number of florists are a little careless about providing for the future well being of the plants after the sale has been made, and this is assuredly a very unwise policy. Trade is built up by giving thorough satisfaction to customers, and one vase, for instance, that has been a joy to its possessor all summer long is not only an excellent advertisement for you but is a benefit to the whole trade, while an unsatisfactory one has injured you and the trade to the same extent. Be sure that your soil for filling vases is just right. And if a vase is of such shape, or occupies such an unfavorable position that you know plants can not do well in it, tell your customer so, and if the defects are not remedied refuse to fill it. Tell your customer that you do not wish to fill an order for anything that will not give satisfaction. Such treatment of customers pays every time.

Horticultural Instruction.

The summer course in practical horticulture at the Bussey Institution of Harvard University, Jamaica Plain, Mass., offers a splendid opportunity for young florists and gardeners to obtain a broad education in their chosen profession.

We print below a list of the lectures and exercises for the summer course of 1892.

July 6. Opening lecture.—Information in regard to methods of obtaining practical knowledge of gardening in its various forms.—Books of reference, periodical literature; etc.—Examination of the grounds at the Bussey Institution and Arnold Arboretum.

July 7.—Soils; origin, functions, modifications and preparation for use.—practical work in handling soils for different purposes.—Examination of natural and prepared soils and various forms of planting.

July 8.—Soil, tillage, manures, etc.—Exercises in potting and planting.

July 11.—Propagation of plants; the two general methods and examples of the classes of plants propagated in each way.—Greenhouse and out door work in propagation.

July 12.—Propagation by seeds in open air and under glass, with lists of plants so handled.—Practical work as before.—Systematic inspection of hardy trees and shrubs in the Arboretum will now begin, and continue about twice a week during the course.

July 13.—Propagation by division, layers, stolons, stools, root tips.—Lists of examples.—Exercises in these methods.

July 14.—Propagation by cuttings of the stem; growing and hardened wood, with lists.—Greenhouse work in making and planting cuttings.—Construction of the propagating bed.

July 15.—Propagation by cuttings of the stem; ripened wood in open air and under glass, with lists.—Work as above.

July 18.—Propagation by cuttings of the root and root-stock, by leaves and scales, with lists.—Work as before.

July 19.—Propagation; grafting (budding and inarching).—Practical exercises in open air and under glass.

July 20.—The same.

July 21.—Cultivation under glass.—Different forms and classes of plant houses, situation and construction.—Examination of greenhouses and a large number of plans.

July 22.—Details of plant growing under glass.—Soils, potting, training.—Insects and fungi, practical remedies.

July 25.—As above.—Watering and rest.—Hybridizing and selection.—Practical exercises.

July 26.—As above.—Forcing.—Pits and cellars, cold frames, hot-beds.—The frame yard.—Practical work in preparing and selecting plants for forcing.

July 27.—Cultivation in the open air.—Soils, planting, transplanting and cultivating.—Practical work in this direction so far as the season will permit.

July 28.—Further details of out-of-door work.—Pruning, winter and summer.—Training.

July 29.—As above.—Fruit trees and small fruits, with lists of desirable varieties.

August 1.—As above.—Vegetables, with lists of suitable varieties for different purposes.

August 2.—As above—Nurseries.—Various forms of planting.—Trees and shrubs for different uses, soils, and situations.

August 3.—As above.—Insects and fungi, with remedies in practical use.

Supplementary lectures will be given from time to time, taking the place, in part of the exercises in the open air, on the more important plants in ordinary cultivation; *e. g.* conifers, flowering shrubs, herbaceous plants, Dutch bulbs, garden annuals, house plants, grasses (lawns and meadows), roses (hardy and tender), rhododendrons and azaleas, plums and cherries (ornamental), chrysanthemums, lilies.

Any further information desired may be had on application to Prof. B. M. Watson, Jr., Jamaica Plains, Mass.

Daffodils and Streptocarpuses at the big Boston Show.

If anything were needed to convince one that Boston carries the banner in Horticulture a look into Horticultural Hall on a Saturday while a "free show" is in progress would be convincing enough. But the fact is so generally conceded that the proof is unnecessary. The reputation is one to be proud of, and has been well earned. The show given on a recent Saturday (May 8th) struck the writer as being so fine, that the public would have been given full value for their money if they had paid 50 cents admission.

A short report of it has already appeared in your columns; but some of the exhibits deserve a further remark or two. Daffodils and streptocarpuses were especially interesting.

To a lover of daffodils the display of the "Golden Host" must have been delightful. There were collections from three or four growers and all were excellent. Such fine sorts as Horsfieldi, Golden Plover, Golden Princeps, Emperor and Empress made a grand appearance and must have been a surprise to many who have not been keeping track of the many fine new sorts lately introduced. In J. L. Gardner's collection the gem was a variety called Barri conspicuus, a remarkable flower of great beauty, with pale yellow, very large perianth, the cup being chalice-shaped and conspicuously marked on the rim with orange-scarlet. If this variety can be procured at a moderate price it would be a grand thing for forcing for cut-flowers. The blossoms are so conspicuous and attractive that they would out-sell any other variety on sight. Another very pretty red-rimmed sort seen in another collection was poeticus poetarum. In Mr. Manning's collection a very notable variety was the Leedsi glorious, a white and sulphur chalice-shaped flower of large size, very elegant. Dr. Weld had probably the best grown collection in the show and if it had been larger would undoubtedly have taken the first premium. Leedsi elegans, in this collection, is probably the best pure white flower in all the chalice-shaped section. The blossom is large and very beautiful. Narcissus cernuus, a fine white drooping trumpet shaped flower, was another gem of Dr. Weld's. It is a distinct and very charming sort. Altogether the daffodil display was very fine and was an object lesson for florists who were looking for "good things" for their business as well as being delightful to those who love the daffodil for itself.

Mr. Martin (Mr. Kidder's gardener) showed eight pots of the new hybrid streptocarpus. They were splendidly grown and attracted a great deal of attention. Each plant had flowers of a different color but different shades of white and blue with various markings predominated. The flowers were borne from three to five on a stem, somewhat after the style of the freesia and each plant had about 20 to 30 flower spikes with many more just making their appearance. The streptocarpus is said to be of the easiest possible culture and by proper management may be had in flower nearly all the year round. It is certainly a most charming plant and will become popular. There was a fine display of gloxinias in the show, but the streptocarpus attracted a great deal more attention. Perhaps this may have been somewhat on account of its novelty but it is an exceedingly distinct and graceful flower although it does not as yet have the bright rich colors of the gloxinia. There is a future for it, sure.

G. C. WATSON.

Phila., May 21, 1892.

Pennsylvania Horticulture at the World's Fair.

A welcome visitor to the office of the FLORIST last Monday was Mr. J. Coates Walker, of Gap, Pa., chairman of the Horticultural Committee of that State.

He was accompanied by Mr. Robert Craig, of Philadelphia, and came to see Chief Thorpe in reference to the exhibition in the Floricultural Department from the Keystone State. He says that while Pennsylvania cannot grow fruits so well as many other states that many amateurs there have fine collections of rare exotic plants and that several of them have already promised to his committee the cream of their collections to help to represent the Keystone State in the great Exposition next year. Among these exhibits will be the finest specimens from the collections of Geo. W. Childs and A. J. Drexel. Among the plants from the latter gentleman will probably be the finest specimen of Prichardia grandis in the country.

Mr. Walker's mission to Chicago was to view the space allotted to his state and to learn from Mr. Thorpe if he would be ready to receive some of the larger plants this fall; as the building will be ready part of the exhibits will be forwarded in October. Mr. Walker reports that the leading commercial firms also evince much interest and will certainly be well represented.

Mr. Walker has been identified with the farming interests of Lancaster county all his life and is known throughout the county and on the Commercial Exchange in Philadelphia as a capable, successful business man; he is president of the Gap National Bank. He is not a floriculturist but has spent three days in visiting the leading florists in Chicago and the park greenhouses, and bids fair soon to blossom out as a full fledged expert.

He expressed himself as greatly impressed by the magnitude and scope of the Exposition and the amount of work already done in the Construction and Landscape Departments and says it will not be his fault if the Keystone State exhibit is not as complete as possible.

Mr. Walker was appointed by Gov. Pattison on the Agricultural, and Railroad and Transportation Committees as well as the Horticultural Committee but will devote most of his energies to the work of the latter committee.

Mr. Walker was much pleased by his kindly reception by the florists and park superintendents and will cultivate their further acquaintance at the convention in Washington next August.

Mr. Craig was surprised as well as pleased at the great progress made in the work of building the Exposition since his visit to the grounds last September and said many pleasant things about those having the work in charge. It is needless to say that he was given a hearty welcome by his Chicago friends and admirers, and the fact that he had been secured by Mr. Walker as an adviser gave every confidence that the wisest course for the committee to pursue would certainly be adopted. The horticultural display of the Keystone State at the great exposition will unquestionably be worthy of the great occasion.

Chicago.

As noted elsewhere the city was honored last Monday by a visit from Mr. J. Coates Walker and Mr. Robert Craig, who came to perfect arrangements for Pennsylvania's horticultural display at the World's Fair. At the same time Mr. E. G. Hill favored us with his presence, and during the day these gentlemen, accompanied by Messrs. John Thorpe, J. A. Pettigrew, Fred. Kanst, C. J. Stromback, the scribe, and J. C. Vaughan, visited the latter's greenhouses at Western Springs; primarily to see his new cannas, but a batch of new tuberous begonias in one of the houses captivated the party so completely that the cannas had to wait. What grand improvements are continually being made in the tuberous class of begonias! But a short time ago it seemed as though the limit of the possibilities had been reached but the end is not yet. Hardly one of this batch of new varieties but what well merited a place among the new named sorts and many of them were really remarkable advances, or breaks in new directions.

Notaire Dupled seems the forerunner of a new type; the inner petals are rather short, incurved and all are imbricated so that the flower in form resembles some of the old camellias; they are pink in color, with stripes of yellow in the center; Pierre Loti has petals with fimbriented edges, similar to certain Chinese primulas; Mrs. Weiks is a handsome flower, white edged

NEW HYBRID STREPTOCARPUS.

carmine pink; Golden Queen is a magnificent golden yellow; Dr. Feltz, clear scarlet with yellow stripes in center; Mrs. H. Blake, a small flower but of the richest crimson imaginable; Minerva is a very large flower of a beautiful rose color; Albert Crousse, large salmon red; Lady Lewisham has shell-like petals of crimson, the center merging into white; Guardsman is a very brilliant scarlet.

After being finally led away from the begonias the cannas were viewed and they were certainly excellent. Florence Vaughan is a magnificent new spotted yellow that makes the older ones of this type pale by comparison. The petals are broad and rounded to a degree never before seen in this type. It will certainly captivate the people when introduced, as habit, foliage , and the way the flowers are carried are all first class. J. C. Vaughan is a brilliant orange flower of excellent form, foliage dark. Alphonse Bouvier is a grand flower, deserving all the good things that have been said of it. One that is to be named Secretary Stewart is a splendid flower, vivid crimson in color. The flower spike is in form much like Ehemanni, except that the flowers are borne erect. A seedling that originated here promises to be a grand acquisition. It is somewhat similar to Mme. Crozy but there is more yellow in its make up, there being several sharply defined yellow blotches, mainly on the base of the petals, in addition to the yellow border. The plant produces a grand spike of flowers. Mr. Craig considered it good enough to be named Geo. W. Childs and if on further trial it develops no weak points not now to be seen it will be honored with this title. In addition to the new sorts large blocks of the popular Mme. Crozy, Star of '91, and other good varieties were noted and admired. Mr. Vaughan's stock was in excellent condition and he and Mr. Phœnix were warmly congratulated by the visitors on the general fine appearance of everything on the place.

After a hurried trip through the other houses, a train was taken to Hinsdale for a look through the large cut flower establishment of Mr. O. P. Bassett. As usual Mr. Bassett's place was found to be in first class shape. He is very partial to Albany and his flowers of this rose are hard to beat. He finds that with him it blooms as freely as La France in winter, and in spring and summer the Albany is way in the lead both in quality and quantity. Mr. Craig remarked that he also had found the Albany an unusually valuable rose for summer bloom and that he had just planted a house of this rose for this purpose. Mr. Craig considers the new "White La France" — Augustine Guinoisseau, equally valuable for summer blooming, making an excellent companion to Albany. One of Mr. Bassett's great specialties is the American Beauty. He is still cutting excellent flowers of this rose, and the young stock coming on for next season's work is in grand condition. And a rose that he considers the most profitable of all is the much maligned Souvenir de Wootton. The buds are not large but he cuts great quantities of them and they find a ready sale at fair prices. He grows it in large quantity and will still further extend the bench room devoted to it. Waban is a failure with him. The plants seen were the only mildewed stock on the place, and Mr. Andrew Benson, the foreman here, says he has tried it in all conditions that he thought might be favorabe, and exhausted all his skill upon it, but with uniform failure as the result.

After accepting such share of Mr. Bassett's generous hospitality as was possible in the limited time at disposal, the train to Chicago was taken and on arrival there the party was surprised by being led to the dining room of the Union Depot by Mr. Vaughan, who had thoughtfully and generously arranged in advance for dinner. The menu was excellent and over an hour was spent discussing it and the horticultural subjects that always come up on such occasions. The table was decorated with a vase of flowers of the new cannas, prominent among which was the unnamed one, that Mr. Craig toasted and formally christened the George W. Childs.

The majority of the party spent the afternoon in visiting Lincoln Park under the guidance of Superintendent Pettigrew and Head-Gardener Stromback and the visitors were much impressed with the beauties there to be seen in addition to admiring the stupendous work involved in building the new beach, and which will steal hundred of acres away from the domain of Lake Michigan.

Mr. Hill returned home Monday evening but Mr. Walker and Mr. Craig remained over till Tuesday afternoon.

Cut flower trade is so nearly dead that there is little indication of any life at all. It has certainly been a very quiet spring. Some are looking forward to Decoration Day for relief, but that event seems to be of little benefit to the down town florist.

Leap year has had its effect on one of our bachelor florists. On Tuesday, May 17, Mr. Emil Buettner, of E. Weinhoeber & Co., was married. The bride was Miss Bertha Hildebrand, of Milwaukee.

The season is fully two weeks later than usual here, and few shrubs are yet in bloom. At Lincoln Park lilacs are only beginning to show color and the snowballs will in all probability not be in bloom until after Decoration Day. But bedding is going on at this park in spite of the chilly weather. Some 10,000 geraniums are already planted out, as are also beds of stocks, verbenas, double petunias, alyssums, and of course the pansies. But the geraniums and other plants noted were all specially hardened, having been aired night and day for three weeks prior to planting. Otherwise they could not have been safely bedded out so early in such a backward season.

The tulips at this park are now mostly fading, though some still make a bright show. Hyacinths do not do nearly as well out of doors here as the tulips, the former lacking sadly in brightness of color. But the tulips are all that can be desired in this respect.

The new conservatory is very nearly completed. The outside work is all done and the finishing touches are being put on the interior. The work of terracing the ground in front is also well under way. The building is a noble one and the commanding position that it occupies will make it a very striking feature of the park.

At Lincoln Park the variegated geranium Mme. Salleroi and the Golden Feather (Pyrethrum aureum) are still largely used for edging, but they can not be satisfactorily used here in the center of

a bed, as in that position they damp badly. Is this the case in other sections of the country? A plant that did grandly at the park last year was Solanum jasminoides planted on the rocky bank of one of the lily ponds. It covered the bank with a mat of foliage and produced great numbers of its gratefully fragrant blossoms all summer long. It was a surprise to many to see this plant do so exceedingly well in this position.

Philadelphia.

The parade of the Philadelphia Coaching Club May 16 was an event of importance to the fashionable folk of this city. There were nine coaches in line. All the ladies and gentlemen wore flowers, each coach having a flower of its own. English primroses, corn flowers and different kinds of roses were used. On the return in the evening dinner was served at the Bellevue, where the decorations were quite elaborate. There were nine tables, one for each coach. Large quantities of dogwood blossoms were used in decorating about the room. A bough of the same blossoms was placed on a stand in the middle of each table and the stand concealed by apple blossoms. Roses, too, were used in making the occasion a beautiful and fragrant one. In each corner of the apartment was a life sized model of a horse, its trappings like those for a fairy steed, of flowers.

At the monthly meeting of the Pennsylvania Horticultural Society May 17, the following were elected to membership: E. Edwards, J. J. Styer, S. D. Hall, W. R. Shelmire, Chas. E. Meehan, Jas. Lewis, J. J. Smith, H. L. Homes, E. D. Darlington, A. Eldridge Brown and W. R. Latch. The society is growing in membership and a great deal of interest is being taken in its monthly meetings, the attendance increasing each month.

Mr. A. Blanc's essay on Cacti was very interesting. He illustrated his remarks with numerous specimen plants. Mr. Blanc has probably the largest collection of cacti in this country, and has done much to popularize the plant, so that there is quite a craze for them in some localities. He stated in the introduction to his lecture that he had for a long time made the cactus a hobby and had obtained specimens from Mexico, Texas, South America, Arizona and other localities. He invited his hearers to visit his greenhouses at 48th and Walnut, where they would find some very fine specimens.

About 1,500 varieties of the plant have been found, but these have been reduced to 800 and some are so rare that only single specimens remain. The flowers of some are most beautiful; the plants need very little attention and many are quite hardy. The most popular of the family was the night blooming cereus. Mr. Blanc said the supply of wild growing plants would soon become exhausted. He illustrated the method of grafting, described the mode of propagating and told some humorous incidents connected with the cactus. In fact the lecture abounded in witticisms and was so heartily appreciated that Mr. Blanc was given a unanimous vote of thanks.

There is not much doing nowadays and prices have fallen considerably. Fancy roses bring 4 to 6, Perles, Gontiers and the like 2 to 3, Laings and Luizets 20 to 25, Jacqs 10 for the best, carnations 1 to 1.50, valley, coming in very fine from outside, all prices from 1 to 3.

Bedding plants are going fairly well but the backward season interferes a great deal with their sale. Prices are about the same as last season. Most 4-inch stuff sells for from 1 to 1.20 a dozen, 6-inch from 2 to 2.40 a dozen, 2½ and 3-inch from 3 to 5 per 100, good roses in 6 and 8-inch pots from 3 to 6 a dozen.

Robert Craig is first in with chrysanthemums, having a few plants of Mrs. Whilldin, a very early yellow, in good shape. It is accidental, and he says not desirable at this season. Mr. Craig left us on Friday last for Chicago in the interests of Pennsylvania's exhibit of horticulture at the World's Fair.

Mr. Whilldin, of pot fame, has presented the Florists' Club with a dozen or more new cuspidores. They have the club's monogram in gilt letters on the side and are very artistically decorated. They look like fancy flower pots and if some of the members would donate a few palms we have no doubt the club house committee would allow some of them to be used in decorating the room.

Longinette gets a good grip on the ball these days and keeps well up to the front. Baker is setting a rapid pace for the sweepstake prize, making an average of 180 in the last six games. Heron and Westcott are also "in it." Thos. Cartledge, our staid treasurer, was on hand last Saturday evening but could not be persuaded to take a hand in the game. When Thomas does commence there will no doubt be some great scoring, as everything he does is done well.

The recent sales of plants at auction in New York from Philadelphia growers have turned out very well, the prices realized being very good. In some cases they were bid up to more than twice the price obtained here at private sale.

Mr. Longinette's paper on "How to conduct a retail flower store" will no doubt throw some light on the subject. He says he has it in for some of the growers and will endeavor to make their paths a little plainer for them. He will have it ready for the next meeting. K.

New York.

The quantities of roses coming to the New York wholesalers at present is enormous and entirely out of proportion to the demand. Those handling large lots of cut flowers are put to their wits' end to find a means of disposal of them. Worst of all is the perverseness of the retailers, the biggest and toniest of whom refuse to pay any more for their selected stock than the "Greeks" pay for average run. So there is nothing left to "average up" on and the net proceeds received from their cut must bring a cold shiver to many of the growers.

The quality of the roses in market runs very inferior. Mermets and other pink roses are decidedly off color. The lighter shades of pink being most in demand, the Waban finds a very good place now, for its color has lightened just about enough to fill the bill, while the Mermet has scarcely a vestige of pink left.

The lily of the valley in market now is a splendid quality. It is out door grown from German pips.

The retailers must be making money, for they hold up their retail prices nearly as high as they did when they paid good wholesale prices for their stock.

The second orchid sale of the season was held at R. B. Young's on May 19th, including both newly imported and established plants from Sander & Co. Among the gentlemen present were F. T. McFadden of Cincinnati, Jno. Gerard of Elizabeth, W. A. Stiles of *Garden and Forest*, and Dr. Little. A number of the plants went some distance from New York, Mr. Chadwick of Chicago and Mr. Storer of Boston being among the buyers. A new hybrid Dendrobium, D. Cassiope, realized the highest price for any single plant; it is a cross between D. nobile albiflorum and japonicum. Another sale is anticipated in two or three weeks time, which, it is promised, will be of special interest, containing a number of noteworthy plants.

A new store uptown is Carlon's Bryant Park flower store. Mr. Carlon makes a fine display of bedding stuff, in addition to cut flowers.

Another attractive new place is that of W. P. Sears, a few doors above Carlon's, facing Bryant Park. With this place decorating is a special feature.

Retailers report a tremendous run on pansies this season; they were never more popular, and many declare they could handle more than double their usual quantity. Without doubt a good deal of this enthusiasm is the result of the increasing excellence of the plants, the Trimardeau strains especially being so wonderfully improved. Another plant which has sold very rapidly is heliotrope.

Among the plant stalls in the vicinity of Washington Market red geraniums, double yellow maguerites and monthly roses seem specially salable, most of the stalls selling seeds and shrubs as well as bedding plants. Their patrons are not by any means confined to people of small means; we see a good many well-to-do suburbanites buying stuff at these stalls, on their way to the ferry.

Mr. A. C. Tucker is building a dock on his river-front at Nyack, which will greatly facilitate the handling of coal or freight for his place.

Mr. Tunis De Pew has been ill for some little time, but is now recovering.

Mr. John Taylor has commenced on the erection of four more houses at Bayside.

Mrs. Emmons, daughter of T. J. Slaughter, died of pneumonia at Orange, N. J., on May 18. The funeral took place from her father's residence at Madison on May 21.

Mr. Thos. W. Weathered has sailed for Europe to enjoy his customary summer outing.

Boston.

Flower trade has been miserable during the past week, white flowers for funeral use being the only things which show any life. The shutting off of the fakirs from the streets has not been attended with any beneficial results to the large stores, while many of the growers have suffered badly in consequence of the loss of street trade. Public opinion as revealed in numerous newspaper articles is strongly against the prohibition of the peddlers and the two or three flower stores which are responsible for the action of the city authorities come in for considerable denunciation. The movement was evidently ill-advised and ill-directed, for when the peddlers do get back as they surely will, they will be conscious of their strength and are apt to be more aggressive than ever.

Mr. C. M. Atkinson exhibited at Horticultural Hall on May 21 a pretty group of orchids among which was a fine specimen of Cattleya Mossiæ Reineckianum for which he received a first class certificate of merit. L. H. Farlow showed cut blooms of Cattleya Mendelli one of these being a remarkably fine variety with exceedingly rich coloring on the lip. James Comley's calceolarias were unusually fine in size and color, and the wild flowers

from Mr. Hitchings and Mrs. Richards were especially interesting because carefully and correctly named.

"Outlines of Lessons in Botany" is the title of a useful little work in two volumes by Jane H Newell just published by Ginn & Co., of Boston. It is especially adapted for children's use and the outlines follow the plan of Dr. Asa Gray's "First Lessons" and "How Plants Grow," and are intended to be used in connection with either of those books.

The tulips at the Public Garden have vanished and the beds are now a brilliant array of pansies. A superb collection of evergreens and tropical plants are in readiness for the summer display. The lily beds will be a special feature this year.

The bowling fever is at full heat now and will continue till the August tournament at Washington. The club meets at Allen Gymnasium every Saturday evening. W. H. Elliott has been chosen captain.

Owing to the backwardness of the season, the Rhododendron Show of the Mass. Horticultural Society has been postponed to Friday and Saturday, June 10 and 11.

In the city: Mr. Burt Eddy, of Chicago, representing J. C. Vaughan.

Buffalo.

Cool weather and much rain has greatly retarded the planting of flower gardens. We don't usually begin to plant in earnest till the end of May or the first week in June, but it will be after that this year unless we have a great change.

Several of our florists have gone extensively into the tuberous rooted begonia. They are new here and sell well for a house plant, and smaller plants will be used for flower gardening to some extent. The writer last spring recommended them to a customer to fill two iron vases in partial shade, with of course little root room. They flowered the entire summer and were very satisfactory, besides being an entire change from the everlasting geranium, coleus, etc.

Business has been rather quiet this week among the flower men. Adams & Nolan issued a very neat invitation to their patrons and the general public to their opening on Thursday last. Their store was handsomely decorated and the people that flocked to see them was an evidence of their popularity. These flower store openings may be a benefit sometimes but it smacks too much of the "opening of our grand sample room" to suit me. [Dry goods, millinery, clothing and even art stores have "openings." Why should it smack more of one than another? Ed.]

The event of the week here in the trade was the gathering of the craft both city and country folk at the wholesale house of Daniel B. Long last Monday. It was quite informal but most enjoyable. Dan presided at a huge "tubful" of punch and a colored gentleman dispensed delicious sandwiches. Many a sincere wish for Mr. Long's success was uttered there, but there is no doubt about that, for the retailers have already found the local commission man of the greatest convenience. After the punch Dan led about 40 of us to the bowling alleys, where the city experts tried to have much fun with the honest village florist, but in some cases it was a failure. The rustics rolled in great form and their hardier constitutions enabled them to withstand the effects of the dissipation better. But Oh my, the scores! Be thankful they will never be published.

Your correspondent took a flying visit to Toronto last week in company with Florist Belsey. After spending a few hours with that prince of good fellows and good all round gardeners, George Vair, we drove to Cousin John Dunlop's place. I don't want to encroach on the duties of your able Toronto correspondent but must be allowed to say that for neatness, system and above all for quality of his roses (of all kinds) John's establishment can not be beaten on this continent. Walter Muston too, although small in quantity beside Mr. Dunlop's were of equally fine quality.

We have good reason to believe that the bedding plants sold here are considerable better than in many other cities. We get $1 a dozen for coleus in 3-inch pots and $1.50 for geraniums in 4-inch. But they are fine plants and well worth the money. One of our largest plant growers, who also grows lots of Easter stuff, had to work a gang of men evenings. One of the evening's work for three potters and four helpers, from 7:30 to 10 p. m. (two and a half hours), was shifting 1,600 coleus from 3 to 4-inch pots. These are used for vases and veranda boxes. When potted they occupied a space 100x4. An agent of a large eastern firm wabbled in the next morning and was shown the previous night's work. He said "pretty fair." The proprietor tells me he kept his temper, but would awfully like to bet said agent that 24 like him can't do the same amount of work. We have hustlers here besides the Niagara.

Scott has been keeping up a good show of orchids in his window, principally Dendrobium thyrsiflorum and densiflorum, Cattleya Mendelii and cypripediums. Calling on him recently he remarked that the orchids, although not "born to blush unseen," yet they wasted "their sweetness on the dollar air." We took him to infer that there were not many dollars in them. He also remarked that the quotation should not be attributed to W. K. H., of Quaker City, or Walt Whitman, but to the lazy but immortal Grey, of Churchyard farm. G. S.

Memphis, Tenn.

RAMBLING REMARKS BY A RAMBLER.

May 12 was a great day for Memphis and as usual in this age of advancement in art and culture, the florist occupies a prominent place in the front ranks to mingle beauty with business and crown with flowers man's greatest achievements. The occasion is the grand celebration of the completion of a bridge of unusual proportions that spans the great Mississipi at this point, connecting the States of Tennesee and Arkansas with iron bands that facilitate commercial and social relations by means of railroad communication. The city is crowded with visitors and the florist's skill has been taxed in shaping with flowers numerous designs suggested by the occasion. In a prominent show window of Main street is a very elaborate design in flowers, representing the bridge, also a large design of a memorial nature executed in flowers and dedicated to the memory of Jas. Phelan, member of Congress from this district, through whose efforts the charter for the bridge had been secured, but who died before seeing the great aim of his life completed.

These beautiful tributes were the work of Olaf Johnson, who from a small beginning has rapidly come to the front among the leading florists of the city. Mr. Johnson met with a severe loss last March by the crushing in of one of his palm houses with snow, utterly ruining house and stock. Snow fell to the depth of 20 inches and as outdoor roses were in bloom at the time and many plants set out, much damage was done to the country at large by this unprecedented storm. Mr. Johnson will rebuild several of his houses and generally increase his cut flower capacity.

Another prominent florist is J. T. Williamson, who has a spread of glass that would do credit to any city or locality. Though born and bred a gentleman of means and leisure, he inherited from his father, who had private conservatories, a love of floriculture, and when called upon to take an active part in life, chose the vocation of florist, and right skillfully he has controlled the business. He is his own foreman and director and his houses and their contents give evidence of the good judgment that planned the one and cultivated the other. Growing of cut flowers and decorative plants is his principal object, though some houses contain very fine bedding plants; roses predominate. We saw some very fine American Beauties, though a little off color on account of the heat. La France, Mermet, and Mme. Hoste seemed to be the leading favorites. Jacqs are in full bloom outdoors in his garden and could be cut by the wagon load. Mr. Williamson is a member of the Tennessee Club and was "up to his eyes in business," decorating the rooms of their elegant building in the city, which were thrown open for the reception and entertainment of distinguished guests from abroad. The banquet hall and the tables of the Chickasaw Club also gave evidence of his skill, and of the profusion of flowers he was able to furnish.

Harry Lanham, another well known florist in these parts, we found at the reception hall of the Mystic Shrine, where were entertained members of this select order of social brotherhood. Here he was so busy catering to the entertainment of a crowd of guests at dinner time, that he could spare no time for more than a moment's welcome. We afterwards had a pleasant visit with this genial gentleman, who while reducing a fragrant Havana to smoke and ashes, told "how he became a florist." Mr. Lanham for many years was a machinist and had charge of the City Water Works, but being a lover of flowers, he built a small hot house for his own amusement and in this way little by little, was drawn into the business which finally assumed such proportions, he was compelled to give up his outside engagement and devote his whole time to the management of his pets. He is this season remodeling his houses and getting in shape to further increase his business, devoting more space to the cultivation of cut flowers.

It is a universal statement among florists here that cut flowers are the only things that pay. Plant business is dying out everywhere. I was surprised to find in the city of Memphis very little bedding done. Fine houses and spacious lawns abound, but the floral ornamentation consists of a few rose bushes, old fashioned honeysuckles and hardy shrubs. An occasional clematis would climb a column or trellis and lend a still more lonesome air to the vacant surroundings by the presence of its scattering bloom. One grand beauty, however, is here in profusion, the stately Magnolia grandiflora. A sight of this magnificent tree with its dark glossy green foliage and immense creamy

white flowers fills the heart of a northern florist with envy.

We called on Mr. Moore, one of the eldest if not the oldest florist in the city, and failed to find him at home, but learned from his son that his father desired to sell or lease his place and quit business on account of failing health. We also visited the Tennessee Floral Co., but the manager was attending to business in the city and we did not have time to return. We were also, for lack of time, prevented from calling on the Memphis Floral Co. and the garden of John Pearson & Co.; the latter is located near the beautiful Elmwood Cemetery and I was informed that the gentlemen were doing a good business.

Memphis is a good business city, the people are wealthy, fashionable and tasty, consequently, cut flowers are in great demand and bring good prices. Many of the florists do not grow half enough to supply their customers but buy largely from St. Louis, Cincinnati and Chicago. The tendency among most of the trade is to devote more space to cut flowers in the future and let the market gardeners grow geraniums and bedding plants in pits and cold frames, which they now do to a large extent.

I find a great difference in the construction of greenhouses in this southern climate from the general plan adopted in the north and east. Here most of the houses are made up of long sash about four feet wide, reaching from the eaves to the purlin, where they meet the ventilating sash. A skeleton work of 2x4 rafters forms the frame work supporting these sash. In summer the sash are all removed and the house has only ribs to show. If roses are growing on the benches, they are allowed to remain till they quit blooming, are then lifted and set in the open ground, the house and sash are painted, benches repaired, new roses planted on the benches, and when cool nights commence the sash are replaced and you have a greenhouse. For this climate I think the plan a good one, and even farther north I think for some purposes, houses of this kind would be found very useful and convenient.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. C. VAN LINDLEY, Pomona, N. C., president; W. J. PETERS, Troy, O., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY Franklin Grove, Ill., treasurer. The seventeenth annual meeting at Atlanta, Ga., June 1 to 3, 1892.

The Effect of the Past Winter on Evergreens.

Probably I didn't deal full enough with this subject, page 907, May 12. Editor Stiles, of *Garden and Forest*, writes me, May 14, about the effect of the winter on evergreens in Jersey City, where he lives, and makes further inquiries on the subject as regards the evergreens here at Dosoris. He writes: "A beautiful filifera (Retinospora) which was a perfect mound some five feet high and as many across, a squarrosa some 12 or 14 years old and 10 or 12 feet high, a nice silver tipped arbor vitæ from Robert Douglas and one or two more are ruined beyond recovery. * * * A week or two ago I was riding by a florist's on Jersey City Heights and he had a large block of these retinosporas a foot or two high exposed to the west, and I think that almost every plant was killed." And so on.

None of our retinosporas have been killed because they occupy the more sheltered parts of our grounds, but all have felt the ill-effects of winter (March) more or less. Pisifera and its allies, as filifera pendula, have suffered most of all and immensely more on the northwest side than elsewhere. Squarrosa and plumosa and its varieties suffered considerably; ericoides, more by snow than cold; filicoides, leptoclada, tetragona and lycopodioides in a lesser degree, and obtusa and its varieties least of all. All of our American arbor vitæs (T. occidentalis vars.) have escaped fairly well, but it is a fact that the silver tipped sorts, Columbia for instance, have suffered more than the yellow variegated kinds, George Peabody, for example. Throughout other conifers the same is true as regards white or yellow variegation. Chinese arbor vitæs (T. orientalis) in exposed places have been hurt a good deal, but in protected places not at all. Thujopsis dolobrata in moist, sheltered, thinly shaded parts has escaped without a stain. T. borealis isn't worth growing it is so unsatisfactory, one will die unaccountably and the next one to it remain unharmed. Cephalotaxus of sorts suffered much, and strange though it may seem podocarpuses alongside of them have wintered capitally. Cunninghamia sinensis always gets more or less hurt every winter, although we have a 13-foot high board fence on the north side of it, and this winter it didn't get hurt a whit more than in previous years. The Colorado Douglas fir is unhurt, but the Oregon type—a far prettier and more feathery form—shows a good many deadened twigs but not enough to mar the specimens.

While Azalea amæna shows no sign of the winter's blast, "hybrid" rhododendrons have been severely handled. Contrary to my expectations, Phillyrea Vilmoriniana, a fine broad leaved evergreen of recent introduction, shows no ill effects whatever, and again contrary to my expectations Desmodium tiliæfolium, a handsome flowered deciduous shrub which before now behaved splendidly here, has been killed to the ground. Scotch broom that lived unhurt for years has lost four fifths of its wood, and even under a thick covering of spruce branches furze got killed to the earth. Calluna vulgaris, something quite unusual, has got cut sadly, and Dabœcia polifolia, as one might expect, has been nearly killed out. Osmanthus illicifolius, a beautiful holly-like shrub from Japan, shows no sign of bad usage, but Indigofera Dosua, a deciduous shrub from the Himalayas, got cut hard back into the old wood.

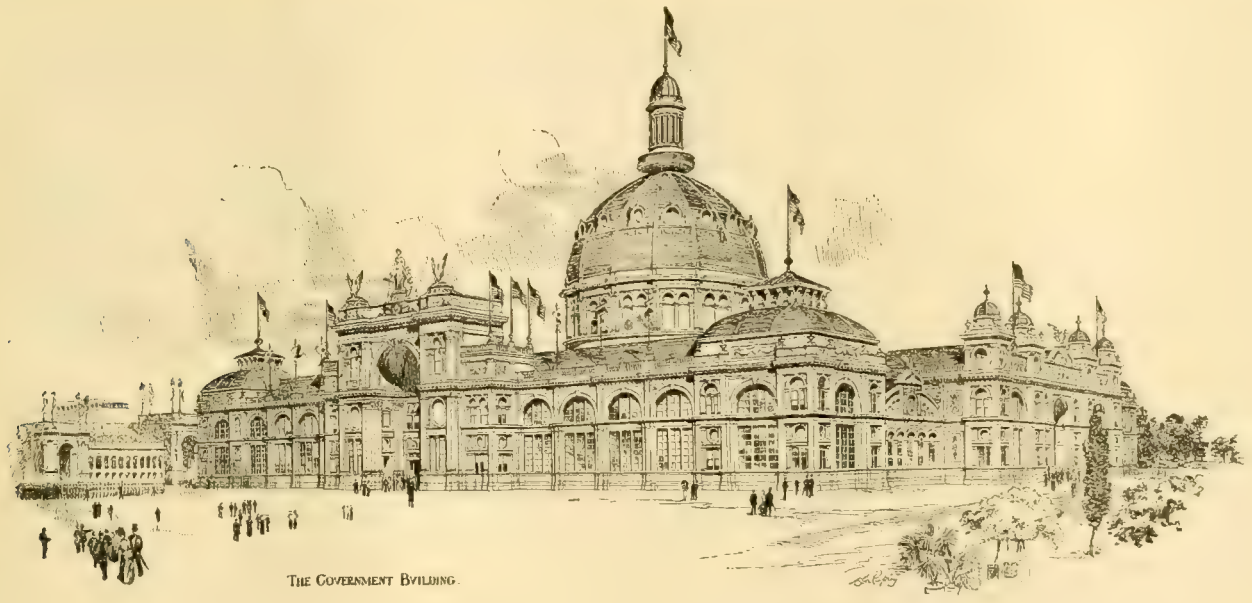
WM. FALCONER.

Glen Cove, Long Island.

Azalea Notes.

BY C. PETRICK, GHENT, BELGIUM.

An interesting and peculiar feature of the azalea trade is the way the demand and taste as to colors varies with different countries. Whereas the English are more for whites, France and Germany prefer bright rose, pink or crimson. It is difficult to decide what varieties we should grow, although there are certain varieties in general demand which we might call market sorts. Mme. Vander Cruyssen has been at all times a favorite with the French. It took many years before we could sell any of them about England. But taste and fashion are variable and that ugly Mme. Vander Cruyssen, as they used to call it, is now every where regarded as a grand variety. Deutsche Perle is another fine sort. It is pure white and very double and will freely force for Christmas. While Mme. Vander Cruyssen is considered the best for market Deutsche Perle is the most useful for cut blooms. Some of the best double whites are the following: A. Borsig, Bernard Andreas alba, Flag of Truce, Sacundala, Eborina plena, Heros, Johanna Gottschalk, Raphael, Madeleine, Mme. Hermann Seidel. Of singles I would recommend Blutheana as the earliest for forcing, also Mlle. Marie Planchon, Konigin der Weissen and Louise Pynaert.



In self-colored ones great progress has been made in raising good and distinct colors. The number is very large already and yet almost every year it is increased by some new and distinct colors. Among the self-colored varieties Mme. Vander Cruyssen takes the first rank; Simon Mardner is a fine double rose; Bignoniæflora plena and Hermosa, rose and very double, both valuable for early forcing. A fine semi-double with large flowers and rosy crimson is Memoire de Louis Van Houtte. Some other good varieties of similar colors are Dr. Moore, Juliette, Bernard Andreas, Duc de Nassau, Irena, Camille Vervæne, Mme. Paul de Schryver and Hermione. A very attractive and handsome variety is Baron Nathaniel de Rothschild, of violet color with a bluish shade, also Tampa, velvety violet and very double, and Theodor Reimers, with very large double flowers. Violacea multiflora flowers in trusses of five and six, the flowers are very double, violet and of medium size. The first azalea of violet color, Heinrich Heine (it used to be called the blue azalea), was raised by C. Schultz, a famous German grower.

One of the brightest and most effective colors is Le Flambeau. It is of deep glowing crimson and single. A very similar color is Perfection de Gand, but the flowers are larger and it is of stronger growth. It is a most desirable variety. Ami du Coeur is another distinct variety, of bright coral red color with large and very double flowers. Next to this I would recommend Phœbus, vermilion red, very double; Charles Leirens, deep salmon red and very double; Apollo (Sch.), Oberst von Kutzinsky, Prince Rudolph, all scarlet and double. In General von Werder we have a very handsome single scarlet for early forcing.

There is a general rush now for Vervæneana. It is no doubt a fine variety, but is it wise to pay such fabulous prices for inferior quality plants? There are other sorts equally fine, such as Empress of India, Mlle. Louise de Kerchove, Princess Louise and Mlle. Marie Rosseel. There is Princess Victoria, a beautiful pink, and Helene Thelemann, of soft rose color, very double, of medium size; both varieties I would particularly recommend for cutting. Also among the single flowering kinds of pink color we have several extremely handsome varieties. Sigismund Rucker is a splendid azalea; also versicolor, Mme. de Greve, Professeur Walter, Comte de Chambord, Jean Vervæne and Mme. Victor Cuvelier. The latter is quite new, of a magnificent rich pink color.

Among striped sorts we have Baronne de Vrieri, Apollon, Souvenir du Fr. Vervæne, Daphne, Neige et Cerise, all single, and Marshall P. Wilder, Mme. Camille von Langinhove, Rosa Bonheur, Countess Eugenie de Kerchove, Mme. Louis Vervæne, all doubles.

As I write these lines I receive the AMERICAN FLORIST (which I always read with great interest) No. 184, and under the heading "Our Telephone" I find one remark of Mr. Dean's that interests me.

THE GOVERNMENT BUILDING AT THE WORLD'S FAIR.

Mr. Dean says: "Most of the fine new varieties over there (in Ghent) are raised by amateurs." I fancy it is a misprint, or the AMERICAN FLORIST did not properly distinguish through the "telephone," or Mr. Dean may have been misled by some one who had an interest in doing so. In fact almost every variety of Indian azaleas has been raised by florists or nurserymen. Although I have grown azaleas for more than 18 years I never heard of any raised by amateurs. Proofs are better than assertions, therefore I thought I would mention some of the principal raisers.

Mr. Fr. Kinghorn, a well known nurseryman in England, was no doubt one of the very first who fertilized Indian azaleas. Among others he raised Mars, President, Sir Charles Napier, Symmetry, all sorts now of days gone by, but in their time unsurpassed in every respect. In Mr. Ivery we have another English pioneer. His Iveryana and Criterion are still known in the trade.

Louis Van Houtte, the creator of the fame of horticulture in Ghent, raised innumerable varieties. It would be almost impossible to enumerate them all. Some of the best known are: Alice, Baronne de Vrieri, Metiore, Mme. Iris Lefebvre, Juliette, Charles Leirens, Dr. Moore, Jean Vervæne, John Gould Veitch, Mlle. Louise de Kerchove, Sigismund Rucker, Cocarde Orange, Memoire de Louis Van Houtte and many newer kinds. Dominique Vervæne, of Ghent, raised a number of fine varieties, but very few of his sorts are in cultivation at present.

Later on we have some very successful raisers of new azaleas in Germany. They are Simon Mardner and Rose of Mentz, Liebig at Dresden, C. Schultz in Hanau, and others, to whom we are indebted for the largest part of the beautiful varieties now in cultivation. There are Helene Thelemann, one of the most useful for cutting, A. Borsig, Bernard Andreas, Duc de Nassau, Duchess de Nassau, all well known sorts which testify to the skill of the raiser, Simon Mardner of Mentz. At the same place we have Mr. Rose, another German grower: Deutsche Perle, Frau Hermann Seidel, Lina Born, Garten Director Krause are sorts of such great value that it is unnecessary to add anything in his praise.

I leave it to the reader to judge of the skill of Mr. C. Schultz by the varieties he raised: Apollo, Bignoniæflora plena, Eborina plena, Imbricata, Niobe, Rhea, Schnee, Sacuntala, Scharlachrischen, Wilhelm Scheurer, Cleopatra, Dr. Hermann Weigel, Hermione, General von Werder, Heinrich Heine, etc.

Mr. Liebig, of Dresden: Alpen rose, Dante, Edelweiss, Germania, Hermann Seidel, Superba, Kalakaua, Graf Franz Thun and the old well known Blanchard.

Mme. Vander Cruyssen, Mme. de Greve and Apollon were raised by a grower in Ghent. There is another very successful raiser in Ghent, who has sent out some of the very best sorts, Joseph Vervæne, of Ledeberg. He raised the beautiful Vervæneana, also, Camille Vervæne, Amie du coeur, Louise Vervæne, Perfection de Gand, Neige et cerise, Perle de Gand, Wm. Victor Cuvelier, and many others.

Mr. Dean says further on through the telephone: "On the other side of the water (I fancy Mr. Dean means Belgium) the growers are getting careless respecting the shape of plants." I am sorry to say this remark is fully justified. But how could it be otherwise? Many of our azalea growers hardly know what they do grow. In fact I doubt whether they deserve the title of grower or nurseryman. Most of them are simply peasants, who worked for five or six months at a nursery, just to get an idea of azalea growing and then started for themselves. Many do not know the sorts they grow. They get the grafts from a neighbor and these they propagate all their lives, or at least until some other merciful neighbor gives them a few twigs of a newer kind. Many of them have no education, and are not even able to write their own names.

As to pinching the plants in time or growing them in symmetrical form, these people will not do it. "We find customers for all we grow somewhere," they say, "and shall we make the plants so much smaller for the sake of getting them symmetrical?"

The Government Building at the World's Fair.

This building covers an area of 350 by 420 feet, is constructed of iron and glass and cost $400,000. Its leading architectural feature is an imposing central dome 120 feet in diameter and 150 feet high, the floor of which will be kept free from exhibits. The south half of the building is devoted to the exhibits of the Postoffice Department, Treasury Department, War Department and Department of Agriculture. The north half is devoted to the exhibits of the Fisheries Commission, Smithsonian Institute and Interior Department. The State Department exhibit extends from the rotunda to the east end, and that of the Department of Justice from the rotunda to the west end of the building.

My Experience as an Orchid Grower.

In February, 1890, I was seized with the orchid craze. I read so much of them in both floral and daily papers and was so filled with the idea that there was something awfully mysterious and difficult in their culture, requiring at least an intimate knowledge of the occult sciences and the government weather reports, that I longed to possess a few and try my hand at growing them.

I had received several price lists and catalogues of orchids and having studied the price lists carefully I made a list (I like to be systematic in these matters) first of all of the orchids I would like to have and then of all those that I could get. In the former I placed all such as cost over four hundred dollars each and in the latter all that were priced at fifty cents and less; then making a careful comparison between my list and my pocket book I picked out three—Epidendrum vitellinum majus, Oncidium tigrinum and Ondontoglossum Rossi majus. These are terms used in botany. I looked them up in Webster's dictionary and that is what Webster told me.

In due course the basket arrived. They were curious looking plants, two with green bulbs and the other had bright glossy chocolate colored bulbs, all had grass like growths.

I struck out for the woods and cut from a tree three pieces of Polypodium vulgare fern roots about five inches square; this material looks like a piece of thick brown felt. Onto this fibre and among the ferns I wired my orchids, dipped them into

water and hung them on the hotel piazza by cords, and the next day left for a two days' trip to the woods. That night a tremendous frost fell and my orchids were so badly frost bitten that the growths all dropped off. Oncidum tigrinum never recovered from the shock; it died in a few months of a dry rot after making a tremendous struggle against adverse circumstances and my culture.

The other two recovered and made a fine growth of roots into the polypody fibre but they would not bloom right away and therefore I did not think they were doing well and having read an article in the AMERICAN FLORIST on orchid culture, I made a floricultural hash of green sphagnum moss, some pieces of pots, a mutton bone pounded into coarse pieces and some charcoal. To this I added a liberal quantity of plant food. Still they would not bloom, and after waiting another sixty days I began to feel sorely disappointed; great big doubts began to pervade my mind. Could there be something wrong about that potting material, or should I have used a beef instead of a mutton bone, or were the pots in too large pieces, or should the charcoal have been burnt of oak instead of pine? Surely the plant food had not failed. It said on the wrapper that it was good for all plants. Could the firm have made a mistake and sent me century plants instead of orchids?

I was discouraged but resolved to try again. This time I placed in boxes of clean, green sphagnum. I felt though that so much intense study was wearing out my physical and mental economy, so I turned them over to the negro porter to take care of, instructing him to water them three times a day. Three months after he came to me and said: "Boss, that there thing is in bloom." Sure enough Odontoglossum Rossi majus had two pretty white and pink blooms, and six months later, in March, Epidendrum vitellinum majus bloomed, with two quite large spikes of red flowers with a small yellow center, and remained in bloom till August 15. This latter died later. I am of the opinion that "excessive forcing" in the early stages of culture killed it. I have still Odontoglossum Rossi majus which bids fair to bloom again.

I write this letter to show that orchids are not so awfully delicate, and also to give the professional florist an idea of the kind of treatment plants sometimes receive when an amateur struggles with them—and would like to suggest that these two orchids are the kinds to sell to amateurs to start with.

For myself I feel awful vain over my success and if you fellows have anything that is real hard to grow I wish you would send it along to

CALDWELL, the Woodsman.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED By a German florist, 29 years of age, well posted in culture of palms, ferns and other greenhouse plants. Address E T., care American Florist

SITUATION WANTED By a young, sober, German gardener and florist in a large place. Address CONRAD SCHULZE, 118 Greenwich street, New York City.

SITUATION WANTED In or near Chicago, by gardener and florist; thorough, practical man; age 26; speaks English and German Best of references. FLORIST 2423 Bank St., Louisville, Ky

SITUATION WANTED By Scotch florist of 20 years' experience in rose and carnation growing and general floral work. Good references; strictly sober; single. Address OLIO MILTON, 187 Water St., Newburyport, Mass

SITUATION WANTED—By a sober and willing man; age 24; June 5 or 15, on florist, nursery or private place; speaks English and German. Expect good wages. Prefer California or the west. Address G. RENTSCHLER, 4057 Louisiana Ave., St. Louis, Mo.

SITUATION WANTED—By a first-class florist; German, single, 25 years of age; excellent knowledge in growing roses, carnations, cut flowers, propagating palms, general stock and well up in design work. Best of references. Address Box 1532 Postoffice, Salt Lake City, Utah.

WANTED—At once a steady, sober and reliable man; must be a good grower of cut flowers, roses, carnations, violets and general greenhouse stuff. Address, stating wages wanted. P. O. Box 81, Indianapolis, Ind.

WANTED—Sober, reliable man with fair knowledge of rose growing, on commercial place; also capable of taking charge when required. Address B, care Geo. Anderson, 5230 Woodland Ave., Philadelphia, Pa.

WANTED—A single young man aged between 20 and 30, for general greenhouse work. State experince, and wages expected. A good opening to learn the cut flower trade Address I L, Tacony, Philadelphia, Pa.

WANTED—At once, two young men; must have good experience in the growth and propagation of roses and other plants usually grown for a retail catalogue trade. Must be well recommended, and be rapid workers. Apply, giving references and stating wages expected with room and board, to EVERGREEN LODGE FLOWER GARDEN, Clarksville, Tenn.

FOR RENT—Greenhouses, either with or without dwelling. Address VIRGINIA, care American Florist, Chicago.

FOR SALE—Greenhouses and stock. For particulars, address W. S. SAWYER & Co., Lincoln, Neb.

FOR SALE OR LEASE—Greenhouses and dwelling, with or without market garden attached Address VIRGINIA, care Am. Florist, Chicago.

FOR SALE OR LEASE—A growing business, with greenhouses, dwelling and ample grounds. Address VIRGINIA, care American Florist, Chicago.

FOR SALE—Second-hand glass, 25 to 30 boxes each, 10x15 and 8x10 double thick ground glass. No broken or cracked lights. $2.00 per box. Box 234, Lee, Mass.

FOR SALE—Three greenhouses well stocked, good trade, old stand, in city, 6 miles, town 5,000, new depot, cheap, going to Scotland, part left on mortgage. HOMO, care American Florist.

FOR RENT—Greenhouses containing about 8,000 square feet of glass, heated by a Dunning steam boiler, together with two acres of ground, situated 5 miles from Washington, D. C. Address MRS. L. B. CHANDLER, 2d Auditor's office, Washington, D. C.

FOR SALE—Well established and centrally located florist business, including residence, lot 100x134, greenhouses, boiler, etc., and choice stock, in a city of 50 000 population. Reason for selling, death of late proprietor. A splendid opportunity for a man of small capital. For further particulars address, FARMER & FARMER, Solicitors for administratrix, Hamilton, Ontario.

FOR SALE.

One large Tubular boiler and pipes used in the heating of several large greenhouses. Also horse-shoe boiler and accompanying pipes capable of successfully heating three greenhouses. Both in perfect order

MRS. MURNANE,
1402 Taylor Ave., St. Louis, Mo.

WANTED.

An active business partner with capital of from $3 000 to $5.000 in Greenhouse and Seed Business. A fast growing northern town of 33,000 Flower business quite new in the locality. A large and rapidly settling territory to be supplied from this point with seeds, plants and flowers. Eight or ten towns of 4000 or 5000, and a great number of smaller places are tributary to it. On application from a practical florist with the above capital, catalogue for 1892 will be sent, and full particulars given. Change of business in July or August. Addre s NORTH, care American Florist, Chicago.

FOR SALE—Greenhouse Fixtures.

94 Windows several uniform sizes; 18 windows odd sizes; all painted and in good condition; containing about 2,400 feet 8x10 glass. Also water heater and about 850 feet iron pipe with connections and valves. Must be sold to close out business. A splendid opening for a good greenhouse commanding extensive sales of cut flowers and designs.

The above fixtures will be sold cheap at a single sale or in parcels to suit purchasers. For further information, apply to H. PFUND, Executor of Fred Schelbel dece'd. Madison, Wis.

FOR SALE.

Nine greenhouses, containing 16,000 feet, of glass, with 8 lots of land, each 40x175 feet elegant dwelling with 11 rooms; barn, wagons, cart, horse and harnesses The above property is located in one of the most beautiful western cities, within 5 miles of the city hall, within one square of electric and cable cars; the same will be sold cheap, as the owner is not able to run the same himself. The above houses have only been built 5 years; modernly constructed, 12x18 double thick best quality glass; heated by steam; abundance of water both from wells and cisterns They are filled with palms, ferns, roses, carnations and bedding plants of all descriptions and all will go with them. Address J M, care American Florist, Chicago.

FOR SALE.

Nine greenhouses containing about 16,000 feet of glass, ⅛ best double glass; all houses rebuilt 4 years ago; heated by hot water—use city water for watering—2 acres of land, 1 brick dwelling house with 8 rooms, 1 frame house of 4 rooms, stable, horse, harness, wagon, etc. The above property is located in one of the best commercial cities of the west, with a population of over 60,000, and within 1¼ miles of city hall; electric cars pass every 6 minutes direct to city hall and Union depot. The greenhouses are well advertised and enjoy a good patronage at home and from abroad, and now contain a good stock of cut flowers, decorative and bedding plants. Poor health causes owner to retire from business. Would also be willing to sell greenhouses and stock and lease grounds and one dwelling house for a number of years, with privilege to purchase at a fixed price when lease expires. A bargain to a man with small capital. Address BUSINESS, care American Florist, Chicago.

HARVARD UNIVERSITY.

SUMMER COURSE IN HORTICULTURE. 1892.

A Summer Course in Horticulture will be given at the Bussey Institution, beginning July 6, and ending August 3.

Instruction will be given on the theory and practice of gardening.

The course will be open to women.

The fee will be $25, payable in advance to Mr. C. F. Mason, Bursar, Wadsworth House, Cambridge, Mass.

For a synopsis of the course, both lectures and field work or other information, address B. M. WATSON, Jr., Jamaica Plain, Mass.

Circulars descriptive of the other Summer Schools of the University may be obtained on application to the Secretary of Harvard Uuiversity, Cambridge, Mass.

GERMANTOWN, PHILADELPHIA, PA.

BRIDESMAID,
THE SENSATIONAL ROSE
OF THE COMING WINTER.
WATCH IT.

LAST WINTER'S RECORD.—First: A FAST COLOR in all weather. Second: Absolute exemption from malformed blooms Third: Always selling for fifty per cent more than any other roses of the Mermet class. Fourth: Exhibited once; at Philadelphia; winning both Certificate of Merit and a First Premium.

NOTE.—The Shape of the **Bridesmaid** is the same as that of **The Bride.** Its peculiar pink color is distinctively its own, and weatherproof. The bushes are robust, have never had mildew and have not been overtaxed for cuttings. They are free bloomers. For an independent description of it see AMERICAN FLORIST for April 21st, page 828, top half of first column. The young plants this season have been distributed from California to France; but chiefly in northern New Jersey and northern Ohio. Some splendid plants remaining. For references, consult neighboring rose growers.

100 3-INCH PLANTS, $25.00; dozen, $9.00.

Address THE AMERICAN FLORIST CO., Chicago.

A GENERAL INTRODUCTION.

There has been some little complaint of the difficulty of identifying those we would like to meet and become personally acquainted with at the annual conventions of the Society of American Florists. Various plans to make identification easier have been suggested, but all have either been impracticable or have had some objectionable feature that militated against their adoption.

The AMERICAN FLORIST proposes to solve this problem in a way that will we believe be eminently satisfactory to every member of the society, and without any expense to that organization. Our plan is to print in our convention supplement portraits of every member of the Society of American Florists who expects to be present at the Washington meeting. Of course, in order to give space to such a large number, each one will be reduced in size, but they will be good portraits and large enough so that the originals may be readily recognized from them. These portraits will be numbered consecutively and the names given opposite their respective numbers on an adjoining page, and there will also be given in the supplement an alphabetical list of the names, referring to the portrait by number, so that reference from and to the portraits will be quick and convenient.

If you expect to be present at the Washington meeting next August, and are a member of the Society of American Florists, or expect to join at Washington, please send us a recent photograph of yourself, cabinet size preferred. If you have no recent photo, have one taken. This should be attended to now, for with the great amount of engraving that will have to be done we must have the photos in hand by July 15 at the latest. And do not send photos that need to be returned to you as they will have to be cut in arranging in the groups. If you have a good recent photo send it in to us now, always writing name and address on the back.

SOME BRANCHES of the double flowering plum (Prunus triloba) closely set with handsome, delicate pink blooms have been sent us by Dr. I. A. Kennicott, Chicago. He says that the tree is as hardy as a rock with him, which should give Chicago planters confidence in its ability to stand this trying climate. It certainly is a remarkably handsome thing and would be extremely useful to florists for outdoor decoration and cutting. An illustration of this plum, in full bloom, appeared on page 755 of our issue for March 31 last.

YOU CAN'T AFFORD to do business without a copy of our new trade directory and reference book.

NEW CROZY CANNAS

will make you money **FASTER** than any other plants for the next year. We are headquarters for

	Each.

The Seed Trade

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

MR. ALBERT MCCULLOUGH is off on an European trip. He will return in July.

PHILADELPHIA.—Mr. Z. DeForest Ely has been elected commander of St. Alban Commandery, Knights Templar.

ELK RAPIDS, MICH. is coming to the front as a pea growing section; Mr. A. J. Brown, of Grand Rapids, has recently erected a large warehouse there.

MR. LEM BOWEN, representing D. M. Ferry & Co., passed through Chicago May 23 on his way to California. He was accompanied by his wife and will combine pleasure and business on the trip.

DO YOU WANT the government statistics of the Florist, Nursery and Seed trades from the last census where you can have them convenient for reference. You will find them all in our new trade directory and reference book.

News Notes.

UTICA, N. Y.—Samuel Davies, the well known florist, died recently, aged 41 years.

PITTSBURG.—Among the plaintiffs in a suit against the city in a case of alleged illegal assessment of taxes appear the names of Alex. and J. R. Murdoch.

DALLAS, TEXAS.—Trade has held up fairly well to this date, but some of the florists have cut the prices of plants at a terrible rate, offering assorted plants at the rate of 15 to 30 for $1.

KANSAS CITY.—Wm. H. Humfeld, until lately with N. S. Griffith, has leased land on Block street and will erect thereon nine greenhouses, to be used mainly for growing cut flowers for this market. Of the houses four will be 10x75 and four 20x45, in addition to propagating house, office, etc. He has adopted the name Humfeld Floral Co.

MEMPHIS, TENN.—Messrs. Paul Uhlman and Albert Haisch, for the past two years employes of the Evergreen Lodge Flower Garden, at Clarksville, Tenn., have leased for a term of five years the Henry Moore place, this city, and will take possession June 1st. They have purchased the entire stock of plants, supplies and appliances, and will do business under the title of Uhlmann & Haisch.

DUTCH BULBS.

JOHN BARTH BOS,

OVERVEEN, near Haarlem, HOLLAND.

ESTABLISHED 1868.

Large grower of Hyacinths, Tulips, Narcissus, Crocus, Lilies, etc.

Before ordering bulbs, write me for a catalogue.

Washington, D. C.

"See Naples and then die," said an enthusiastic tourist to an Iowan the other day in a hotel corridor here. Quick as a flash the Hawkeye retorted: "Nonsense—see Washington in May and live long enough to *do* the great fair in Chicago next year, that's all I ask for." He was not far from correctly echoing the sentiments of nine-tenths of all Americans, and many foreigners who are privileged to visit the national capital at this season, and read what all is said of the grandeur of the approaching great Columbian Exposition, the crowning event of the age.

At no time of the year is Washington more attractive—its numerous parks and clean, well paved avenues more inviting—its many thousand of shade trees more beautiful, and the floral display in the suburban fields more dainty and plentiful. And it is just this circumstance which the æsthetic and keen eyed decorators of this locality have seized upon and are annually developing more and more into a special feature of national decorative art. Great branches of dogwood bloom, of cherry and apple blossoms are deftly worked into great mural rosettes, or converted into the most fairy-like bowers indoors, or for garden and lawn parties, for luncheons, dinners and weddings, the flowering almond, callas, Harrisiis, hydrangeas, snowballs and spiræas are extensively utilized, either massed or in sprays. Nothing could have been more simple and effective than a dado some two feet wide around the entire circuit of a dining room made up of pendant snowball sprays interspersed with tufts of Asparagus plumosus.

For table decorations, one of the daintiest consisted of delicate wreaths of arbutus around each plate with well wired tiny rosettes of the same flower for the ladies and boutonnieres for the gentlemen. Another unique and rather pastoral decoration at a suburban dinner, consisted of shallow cut glass dishes filled with buttercups alternating the length of the table, and also upon stands and mantels, with tall, delicate V shaped glasses or vases loosely filled with daisies and grasses, and garlands of flowering pea. Potted plants, especially dwarf hydrangeas and calceolarias, the pots encased in the most delicate of white cotton batting secured by wide satin ribbon neatly tied with a bow, are also in vogue for house decoration and prove very effective where proper attention is given to contrast in colors of ribbon and flowers.

Trade is by no means at a stand still, and roses continue to be favorites. One dealer who caters to a certain class of customers, claims to have taken within the present month on a single day, orders for no less than 19,000 buds, at prices ranging from 25 cents to $1 per dozen, and that at no time his supply has exceeded the demand. La France seems to hold its lead, and select blooms with extra long stems were selling the other day at one of the florists for $3 per dozen, while some choice Brunners were held at $6 per dozen.

The spring auction sales of potted plants have commenced, but do not seem to noticeably affect the prevailing market prices.

H. Payne, late with Freeman, has recently started into business on his own account at the latter's former establishment, corner Thirteenth and E streets, and is giving special attention to decorative work. Z.

WHY NOT give us a chance to figure on your Bulb order? We can give you good stock at low prices.

SPHAGNUM.

First Quality (full size and weight), $1.10 per Bale.

Will contract for large quantities at a low figure.

BRAUER & RICHTER, McConnelsville, O.

E. G. HILL & CO.,

Wholesale Florists,

RICHMOND, INDIANA.

Baltimore.

It is almost June, and yet owing to frequent rains little or no planting yet done; the cut flower trade in *articulo mortis*, and the weather so backward that the plant trade is far from making up for it yet. Coal already advanced 25 cents per ton, with the prospect of getting still higher before long. Society people preparing for their spring flitting, and events of importance in the social world few and far between, all taken together makes up a list which indicates that at present and here, the florist's lot is not a happy one.

Still it has attractions which never fail to draw others into the ranks, the latest arrival being Mr. Madsden of Govanstown, who is about erecting houses and becoming a regular commercial florist.

The most important event of the week was the banquet to the officers of the U. S. Cruiser "Baltimore" at which a very handsome set of silverware was presented by the people of the city to the vessel. The decorations were by Wm. J. Halliday and were quite pretty—a model of the ship in flowers, and anchors of roses on the tables, with abundance of fine palms.

Prices are still very low, and stuff going slowly. Really good stuff goes, but while outdoor flowers are so plentiful, ordinary greenhouse bloom hardly pays to send to town. MACK.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

	Per 100
Tuberous Begonias, from the finest European collections	$ 5.00
Clematis, pot grown, 8-inch pots	40.00
Rose, American Beauty, splendid clean young stock	8.00
Fuchsias, all the standard sorts ready for spring sales, 4-inch	8.00
Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in. stuff in fine condition	100.00

Cut Flowers.

For the balance of this month we offer

ROSES—Brides and Mermets	3.00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00
Smilax—Good, clean, heavy stock	15.00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this. Stock guaranteed A1. No charge for packing.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

These varieties are the best and largest known to the trade; selling from 75 cents to $1.25 per bunch. Plants from 3 to 6 inches, packed securely. Cash to accompany order.
BYRON S. ALDRICH,
KALAMAZOO, MICH.

Toronto.

The only and original "Great Scott" honored this city with his presence last week and made as many calls on his large circle of friends here as could be crowded into a couple of days. Your correspondent was one of the fortunate ones called on; he endeavored to induce Mr. Scott to stay over for the Gardeners' and Florists' Association meeting on Tuesday evening but on being told that a speech would certainly be expected of him, with his usual and well known modesty and shyness he regretfully declined on the plea of pressure of business. Seriously however it is a treat to see some of our American brethren here now and then and I should be glad to have more visits to report. Mr. Scott was accompanied by W. Belsey, also a florist hailing from Buffalo, who has a daughter and son-in-law residing here.

"Economy" seems to be the watchword this year with City, Government and the public generally. The city fathers set themselves the task of cutting down taxes to 14½ mills, and of course "Parks and Gardens" (being of least consequence[?]) had to suffer; the Government are doing nothing more than what is absolutely necessary and the head gardeners have to go short of help; and private people are making comparatively no improvements, and as a natural consequence a number of men usually engaged in gardening operations at this time of the year have shaken the dust of this city from their feet and cleared for the States. This is rather a "blue ruin" paragraph, but it is to be hoped that with lower taxes and consequently cheaper living good times will shortly come again once more. A boom which the real estate men have been recently manipulating having "busted" caused the present depression.

The meeting of the Gardeners' and Florists' Association was for the time of year well attended and the flower table was thickly strewn with the finest of the season. Mr. Geo. Hollis brought another seedling carnation, a white, which, if it retains its present form will eclipse anything as yet sent out in quality, size and stem, and the calyx does not look as if it could burst; it is a cross between Swayne and Spray. Mr. Ewing brought a spike of Odontoglossum vexillarium with five very large flowers which attracted much attention, and some one else (I unfortunately omitted to find out who) brought dozens of blooms of the latest things in geraniums, amongst which were some of great size and beauty.

Mr. F. G. Foster moved in most feeling terms a resolution of condolence with the family of the late Mr. Aylett which was spoken to in a similar strain by other members of the Association and carried unanimously. E.

WRITE FOR SAMPLES AND PRICES.

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of "Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100. | **PRICE OF STAR OF 1891. $45.00 per 100.**

Colored plates of Madame Crozy mailed free. Can be supplied in any quantity.

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON, NEW YORK.

St. Louis.

The weather for the past two weeks has been cold and rainy, more than five inches of rain having fallen. The flood has hindered shipping of cut flowers both to and from the city. Good stock is scarce and prices good.

The floral decorations at the third annual banquet given by the trustees of the Missouri Botanical Garden were furnished by the Michell Plant and Seed Co. The table was decorated with Pæonia officinalis, roses Duchess of Albany, plants of orchids and adiantums, and smilax. The curtains and portieres were adorned with asparagus. The pictures were draped and flowering plants grouped about the room. Cape Jasmines were used for boutonnieres.

A large shoe store opened on Broadway Saturday. The store was decorated with flowers and plants furnished by J. W. North.

At a banquet given by the Jockey Club, the floral display was furnished by the Jordan Floral Co. and was all in red.

J. C. D.

Worcester, Mass.

Hyacinths, tulips, pansies and pelargoniums were scheduled for the third spring exhibition of the Horticultural Society, May 19.

The display was small owing to the fact that the tulips and hyacinths had nearly gone by. Joseph Brierly had the best cut pansies and F. P. Alexander took first on best six plants. Pelargoniums made a very small showing. S. H. Record was awarded third.

If the "powers that be" had set the date ten days earlier the display of tulips and hyacinths would probably have been very good, but they neglected to do this and consequently had a poor show.

Joseph Brierly was awarded first for tulips and second for hyacinths; no first awarded for hyacinths. In the cut flower competition H. B. Watts captured first; H. A Jones second. F. A. Blake took first for best basket; Mrs. Thos. Ward second.

NATURAL GAS MADE GLASS
for Rose Houses, Conservatories, etc, etc.
Our glass received the highest award at the Boston Convention of the S. A. F.

A Trans-Atlantic Wail.

BY AN UNKNOWN BOTHY POET.

I'm a broken-hearted gardener and don't know what to do;
My love she is inconstant and a fickle jade too;
One smile from her lips would never be forgot,
T'would refresh me like a shower from a watering pot.

CHORUS.

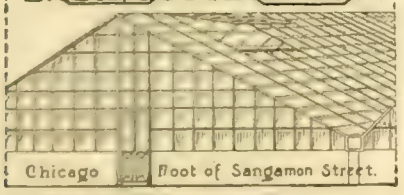
She's a rose, a rose, a fickle wild rose;
A damask, a cabbage, and a wild China rose.

She's my snowdrop, my auricula, my hyacinth,
My gilly-flower, my polyanthus.
My heartsease, my pink and water lily;
My buttercup, my daisy and dafla-down-dilly.
—Chorus.

We've grown up together like two apple trees,
And clung to each other like double sweet peas;
And now they're going to trim her and plant her in a pot,
And I am left to wither neglected and forgot.
—Chorus.

She's my myrtle, my geranium, my honeysuckle,
My tulip and my violet;
My hollyhock, my dahlia,
And my mignonette.—Chorus.

I'm like a humble bee that don't know where to settle,
She's a dandelion and a stinging nettle;
My heart is like a beet root choked with chickweed
My head is like a pumpkin running to seed.
—Chorus.



I'm like a scarlet runner that has lost his stick,
Or a cherry that is left for the dicky birds to pick;
Like a watering pot I weep, like a pavia I sigh,
Like a mushroom I wither, like a cucumber I die —Chorus.

I've a great mind to make myself a felo-de-se.
And end all my woes on the branch of a tree;
But I won't, for I know at my kicking she would roar,
And honor my death with a double encore.

CHORUS.

But Oh! Oh! Who would suppose,
I could suffer so much for a fickle wild rose.

THE THEORY OF DESIGN IN DECORATION

BY F. SCHUYLER MATHEWS.

III.

What is it that constitutes the leading or dominant principle of design; in a word, its key note? I think it is this, adaptability united with opportunity. That, I think, is the underlying, pervading note which, figuratively speaking, one's ear catches before the melody comes. In a flash of the eye it is the immediate recognition of a simple motive in decoration which preceeds the enjoyment of its beautiful details. In the decoration of a room we should have something simple to say, which should be clearly understood by the first person who enters it and uses his eyes. This simple message will be the outcome of some opportunity given the decorator, and his success will be measured by his ability to adapt things to this opportunity, but unfortunately it is often passed by unheeded and some tasteless, awkward creation usurps its place.

This is just what we should be warned against, and our sensible floral decorator will first enter a room and measure its possibilities before he attempts any creation. If there is a particular door, window, alcove or archway to decorate in some pronounced way he will unite every one of these accessories under some simple and well connected scheme of decoration which will result in a perfectly clear notion on the part of the observer of what he is driving at. This is the message and the message is the result of adaptability united with opportunity.

For the sake of illustration we will choose a definite occasion and a particular room which will afford us a field for work. Suppose it is a card party to be held in two connecting parlors. The opportunities will very quickly develop themselves and we can dispose of them one after the other in order. In the first place we should decide on a color tone, and in the second take into consideration the time of the year. Our "stock in trade" consists mainly of roses, carnations, tulips, lilies of the valley, stocks, coreopsis and sweet peas; far above all these in importance to me as an artist is the material yet plentiful, but wild, tree and shrub blossoms, lilacs and buttercups. I know that we are in the midst of practical difficulties as florist decorators in

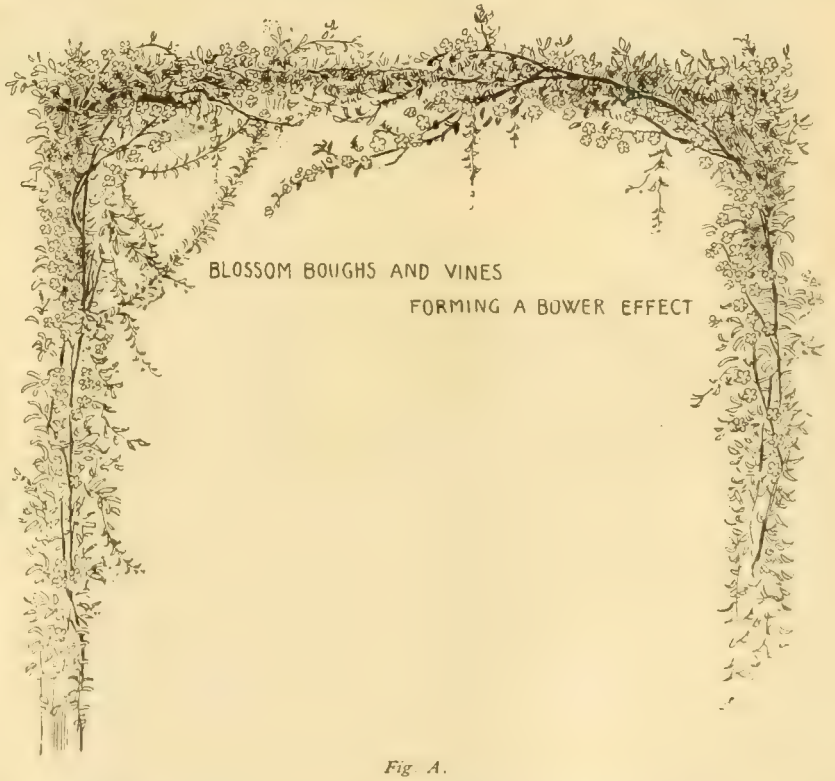

Fig A.

dealing with this wild material, but it is my purpose here to deal with difficulties, and the connection of wild flowers as well as cultivated ones with design principle, is one well worth our consideration. Supposing that our rooms shall have a dominant tone of red in their floral decorations, or pink, if circumstances so require it, or lilac if that be the initiative idea, what shall our method of work be? Shrub to look like shrub, rose bush to look like rose bush, stem flower to look like stem flower. I say this in contradistinction to another method which would be smilax to look like portiere, rose to look like wreath, and carnation to look like ribbon!

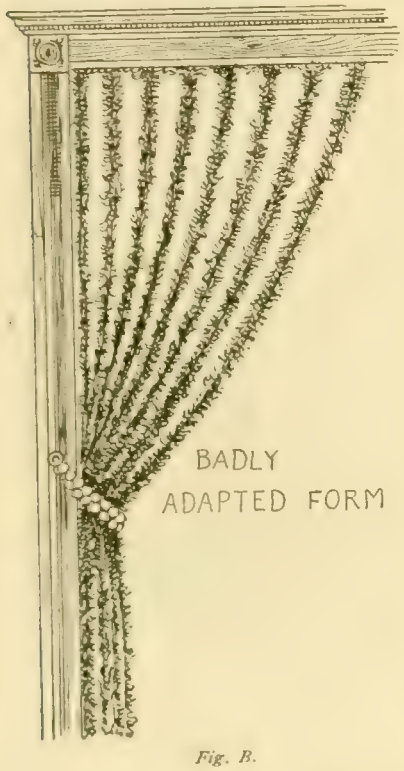

Fig. B.

If the sliding doorway between the two rooms is to be decorated, I think Fig. A will show the way nearest like nature's method. The blossoming bough is an essential element of beauty and its position is natural. The vine has just the lines which nature forms herself, and the combination of the two forms a good frame for a vista. I do not see why smilax should ever be strung and looped up into curtain shape. Nature's "portieres" never hung that way, in proof of which look at the drapery on the trees in Florida and on those in the White Mountains in N. H. Fig. B is in bad taste and has no excuse for itself. A square opening converted into a round arch by help of wire and string is far more excusable, and Fig. C is a fair illustration of lines in legitimate variance with the original architectural idea.

The florist positively needs all the help he can get from cheap, artistic pottery; an effect of Magna Charta, Jacq or Beauty roses, arranged with the aid of moss, bits of stick, wire and a clever hand, is in part dependent upon an artistic jar at the base of operations. The composition of Fig. D is one way of getting the most out of a dozen roses and a yard or so of trailing vine.

What we do not realize the value of, decoratively speaking, as our Japanese friends do, is the branch of cherry, apple or plum blossoms; the day is coming, if it is not already here, when certain varieties of these estimable members of the rose family will take their places among

Fig. C.

their super-cultivated sisters as subjects for our highest admiration.

In a previous article we have discussed the value and beauty in decorative work, of straight stemmed lilies, gracefully curved lines in festoons and masses of contrasting color and form. Now I wish to call attention to the great value of irregular and crooked lines. This brings me to a consideration of this dreaded wild material.

The Pyrus Japonica, forsythia and all apple and other fruit tree blooms ought not to be left outdoors so much. My sketch (Fig. E) shows what these irregu-

Fig. D.

lar lines are worth, and it is very plain that if we are to follow in nature's footsteps we can not discard them. A plain wall covered with a paper dull pink or light terra cotta in color, or one covered with a slaty blue color, is just the background for fruit tree blossoms. Branches may be dexterously trimmed and arranged in a free natural sweep, and the results will show that nothing of this particular artistic nature can find its substitute in cut flowers.

In springtime no room decoration can possibly be complete without the message that the fruit tree blossom carries with it. We must not forget that half the success the Japanese meet with in their use of flowers decoratively is due to a keen appreciation of the sentiment connected with them; and sentiment is an essential element of all good decorative design. If any one fully estimates the value of crooked lines certainly the Japanese does. There is hardly a screen or a fan which comes from his hands on which he has not thrown a picturesque spray of cherry or apple blossoms. It is particularly desirable in a room where the lines of walls, ceiling and furniture are severely straight that there should be some relief by contrast, in shape of rugged and rule-less lines. Hardly a drawing room exists nowadays without its black

Fig. E.

silk gold embroidered Japanese screen. In front of this is a good position for a rich cluster of pink blossoms.

Now, what has this to do with the occasion of which I have spoken—the card party? And in fact what influence can a card party have on our subject, "The theory of design?" Much. I have already said we must watch for our opportunities. Here is one. There will be at least six or eight tables in the room to be decorated with a jar of flowers; at each one there is a separate opportunity of working out a perfect ideal design. There may be six or eight flower colors, each of which may easily carry out a spring-time impression, or supposing the tables be all confined to one color tone, think how many varieties of flowers will give that single color tone variety of form. It is all a question of adaptability, and from the jar of hydrangea to the spray of apple blossom it is simply a matter of finding the right place for the right thing. Adaptability united with opportunity.

Nobody can justly say *this* only is right and everything else is wrong. We must feel our way step by step, we will know when our foot is planted solidly on a stone and when it falls plump in the mire. There is no theory of design which is infallible and absolute; one can only say these are the best *ways* toward the good, you must find out what *is* good for yourself.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

JAPANESE GARDENING. PLATE I.

A Trip to Japan.

During the next few months we propose to take our readers on a trip through Japan and show them numerous examples of its curious and beautiful gardens, and the Japanese plants that we grow, as they appear at home in the Mikado's domain.

To this end we are having prepared a series of engravings from native photographs which where kindly obtained for us at our request by Messrs. H. H. Berger & Co., of San Francisco.

We present in this issue the first of the series.

Filling Vases.

The class of plants to be used in this operation largely depends on the position the vase is to occupy, whether in the shade or to be exposed to the full sunshine, or even placed on an elevation where the plants receive the full force of the wind, it being only natural that disappointment should follow where tender foliaged plants are exposed to such disadvantages. And in this connection it may be remembered that as the suggestion and purchase of a garden vase is frequently made by the dealer who afterward takes charge of the filling, it is to his interest to see that a suitable article in which to grow plants is secured. Terra cotta vases are usually the most satisfactory, providing they are of such shape as to contain sufficient soil for the purpose, and metallic vases in general should be avoided, even though they may be of more elegant form than those of terra cotta, from the fact that in hot dry weather they are liable to bake soil, plants and all unless continually watched with a water pot.

Of course provision will be made for drainage when filling a vase and a light, rich soil will produce the best results, and the plants are necessarily put in thickly from the fact that most customers desire an immediate result and consequently will not wait for the bare spaces to fill up.

In exposed positions there are few center plants better than Dracæna indivisa, its tough foliage withstanding almost any amount of hard usage, or a variegated phormium may be similarly used, P. Cookii var. being probably the best for this purpose, being of more bushy habit than most other varieties of New Zealand Flax and having very distinctly striped leaves.

The aspidistras of course will not be forgotten, their toughness being almost proverbial, while Anthericum variegatum is another useful subject with striped foliage.

Pandanus Veitchii also makes a good center plant, but like any other warm house plant that is used for outdoor decoration in summer should be hardened off to a certain extent before being thus exposed, else the foliage may suffer a little at first.

Among the palms suitable for this purpose Latania Borbonica is hardiest (with the possible exception of Chamærops excelsa, but the latter is so slow of growth when in a small state that it is but little used) and seldom fails to give satisfaction.

Areca lutescens and the kentias may also be used with good effect in less exposed locations, as may Seaforthia elegans and Ptychosperma Alexandræ, but both of the latter are likely to become ragged if they receive the full force of the wind.

Ficus elastica and crotons of various sizes are also admirable stock for the purpose in view, as are also Begonia metallica and some of the strong growing Rex varieties.

Some caladiums from 3 or 4-inch pots may be used to advantage in a vase that is to be placed in a sheltered position, and Aralia Veitchii possesses much more stamina under such conditions than it is often credited with, and its elegant foliage is a welcome addition to such an arrangement.

Cyperus alternifolius and its variegated form are both in the useful list, the latter being a less rampant grower than the type and is consequently better adapted for small vases.

Curculigo recurvata is a graceful plant for our purpose, but does not enjoy strong sunshine and in favorable locations Dracæna terminalis may be used to give a little more color to the arrangement.

A selection of creepers are needed to finish off the outside row and to give a

careless effect, both foliage and flowering vines finding a place, variegated vinca, nasturtiums, Nierembergia gracilis, lobelias, Cissus discolor and many others readily suggesting themselves for such use.

In flowering stuff there is no difficulty in finding enough to brighten up a vase, and in some cases plants of this character may be the most desirable, but where the circumstances will admit of their use a proper proportion of foliage plants usually gives more satisfaction than a vase of flowers only. W. H. TAPLIN.

Jardinieres and Window-boxes for Summer Use.

Among the forms of summer bedding there is always a brisk trade in window-boxes and vases, and though it is easy enough to produce a good result it is not easy to make a great variation in the plants used. A good many fall into the mistake of making these receptacles look "scrappy"; they fill them with a sort of plant hash—anything handy—and the result is for all the world like one of those lots put up at the auctions as "an elegant assortment of bedding plants, one dozen varieties." A good result is often obtained by mingling several different plants, but they must look as if they grew these, instead of being thrown together without any regard for the eternal fitness of things.

Just as soon as spring is here the New Yorker has his vases and boxes filled with pansies; this is invariable, and certainly we cannot find fault with the idea. Very often daisies are used with the pansies; these cheerful little flowers stand the cold winds and changing temperature better than anything else. By the time the settled warm weather has come they can be removed to make room for something else, having passed their best condition. The vases, especially where large in size, call for some bold and tall-growing plant as centre piece, but in the boxes we require something that will not obstruct the view. Another thing to be avoided is the use of plants having such a strong perfume that it is likely to prove offensive.

Here yellow calceolarias are used very extensively in boxes, although their best bloom is over by midsummer, but by that time people are going out of town, so the flowers are of little concern. A striking arrangement noted was a box filled with calceolarias, with a border of lobelia, variegated vinca trailed over the edge.

It may be noted that when a box or vase is filled for all summer the plants should have a little room to grow or they will suffer for the lack of it, but as a rule people want them filled so tightly that you could not find room for another plant, so as to secure immediately the effect of long growth.

It is a noticeable fact that in New York hardly any vines are used in this work except ivy and variegated vinca. Undoubtedly there are other things that could be used, but these two stand heat and cold, drought and bad weather better than anything else, while being amply decorative. Nasturtiums do not seem to last so well all summer in this city as in many other places; they thrive better in localities where the nights are cool. They do admirably in seaside places, or else farther north. The writer was much impressed by the luxuriant growth of nasturtiums in Chicago; they seem to keep a mass of bloom right up to frost. Where they do well they are admirably suited to vase or basket use; some pretty window-boxes recently seen were dwarf maguerites bordered by flame-colored nasturtiums. The double yellow marguerites are also useful in this way.

It was rather a surprise this spring to see our old friend the lantana used in quantity; it has been so little grown of late years. There is no doubt of its usefulness; it blooms continuously all summer long, especially when exposed to the sun, and its neat trusses of bloom range through so many tints, white, yellow, flame-color, mauve and lilac. Its one drawback is the disagreeable odor, but that is not specially offensive unless brought into a room.

Heliotrope and ivy-leaved geranium makes a desirable filling for a box, and we often see an attractive show made with nothing more ambitious than zonal geraniums, with a border of alyssum or thunbergia. A very pretty trailing border plant is the old fashioned nierembergia, with its abundance of little lavender flowers. It is a good thing to use in vases or baskets too, and is not common, though it is so easy to grow and propagate. Another handsome trailing plant for similar uses is Abutilon mesopotamicum. The variegated leaves are very handsome, and the odd little red and yellow flowers attractive, but it is rather a slow grower.

For either box or vase in a dark corner, where there is little or no sun, we find few flowering plants of any use; their place may be taken by aspidistras, begonias, caladiums and anthericum. This handsome foliage takes the place of flowers very well. Small dracænas, too, may be used, or Pandanus Veitchii. The variegated aspidistra is extremely useful in this work; it may be used in halls or stairways, and flourishes in spite of any adverse circumstances.

In filling vases we see palms or pandanus very much used for the centre; the variegated New Zealand flax is another good thing for the purpose. In fact, this plant (Phormium tenax variegata) will be found extremely useful where any bold effect is designed in bedding, and it never seems a common thing. Caladium esculentum is another good centre, or again, dwarf cannas might be used. The remainder of the filling is usually extremely miscellaneous; in fact, there is often a tendency to put in samples of everything that will grow there, and though this might be carried to excess it is certainly better than a cut-and-dried formality. A very pretty vase noted had for its centre a variegated aucuba; around it was a mass of yellow calceolarias, while the border was variegated vinca. Fuchsias, pink geraniums and dwarf white ageratum, with a central dracæna and ivy border made another pretty combination. Blue ageratums are also used, but if combined with other bright colored flowers the effect is rather violent.

The dwarf scarlet salvia makes a good thing both for boxes and vases, and we see a great many petunias used; nearly all free growing bedding plants are used, in fact.

Quite an attractive arrangement was formed in a vase with double petunias surrounding a variegated abutilon, and an edging of lophospermum; the last named is one of the very useful vines for any summer work. The little Kenilworth ivy is satisfactory too where it does not receive too much sun. Gaillardia, calliopsis and calendula will make a fine show in these positions.

So many plants from a warm greenhouse will make a show outside during the summer that our choice is very large for all sorts of bedding, though naturally more expensive plants can not be used freely in a general bedding trade. The crotons make good vase plants, just as they make a show in sub-tropical bedding. A central croton, with a border of begonia and vinca, made a handsome vase.

So far we have not had the opportunity of seeing any of the tuberous begonias used in this way, but there seems no real reason why they should not do well and give us another popular variation in the garden.

For planting large tubs to stand about the lawn few things excel cannas, both the dwarf and the older sorts. Another popular decoration, calling for the same stuff as the vases, is the use of veranda boxes, either standing on a balustrade or on the floor; they are extremely popular and may be varied according to the season, from spring bulbs to chrysanthemums. EMILY LOUISE TAPLIN.

Boston.

Decoration Day finds the market in an unaccustomed condition. Usually lilacs, tulips, Narcissus poeticus and lily of the valley have had their day and are about past, and rhododendrons, azaleas and snowballs have been just in their prime. This year the rhododendrons and snowballs are still in the green bud and the outdoor valley and narcissuses are in perfection. The indications have been unfavorable for good or sufficient stock for Decoration Day. But the gloomy, rainy weather which has prevailed for two weeks gave way to a warm sunny spell in the latter part of the week and there was stock enough to go round, such as it was.

Roses were of poor quality. To find them without mildew was not an easy matter. Carnations held scarce and high. Astilbe is always a first class selling article at Decoration Day and this year was no exception to the rule. But there was very little of it to be had. There was considerable call for callas, but there were very few of them obtainable. In fact, white flowers were generally in demand all round. There were a few gardenias from the south, but the quality was poor. Hardy ferns which play such an important part in cheap work such as most of the Decoration Day demand calls for, are very late here and the south has been drawn on heavily for this staple, as last season's storing has all been used up. The demand for designs of low price, such as wreaths, crosses and other simple forms has noticeably increased, while the call for cheap bouquets has decreased somewhat. The florists' windows are decorated with large numbers of designs more or less elaborate, made from milk weed balls, immortelles and artificial flowers. They are quite pretty and serve their purpose in attracting a crowd of admirers. They are also desirable as relieving the busy dealers of the work of renewing their window display as is necessary when fresh flowers are used. Still it is hard to resist the conviction that the cloth artificial flowers are most decidedly out of place in a florist's window.

The plant auctions are supposed to reach their height in Decoration Day week and prices usually run high at that period. This week, however, the usual rush has not materialized and prices have been only moderate.

John Streiferd is sending some fancy pelargoniums to Hatch which are equal to the best exhibition plants ever seen here. They are superb varieties and well grown.

The rhododendrons at Mr. Hunnewell's are in splendid form this spring. Mr. Harris is making preparations for a grand

JAPANESE GARDENING. PLATE II.

show under the big tent. The Indian azaleas in the azalea tent are just in their prime and are the attraction for large numbers of visitors. The display is not as effective, however, as it will be when the large groups of mollis and Ghents which surround the tent have come into flower. Both the rhododendrons and hardy azaleas are fully one week behind time in blooming.

Extensive improvements have been made in the Italian Garden since last season. Many of the trees have been replanted and an ornamental granite wall adorned with handsome Yew trees has been run along the crest of the hill, thus forming an appropriate dividing line between the formal gardening and the lawn.

The collection of show plants in the conservatory is most brilliant at present. The orchids are especially fine. There are quantities of Cattleyas Mossiæ and Mendelli and Dendrobium Wardianum in bloom and enough in bud to keep up a continuous succession for the next two months. Odontoglossum Alexandræ and vexillarium will also be fine in a short time.

David Allan was the first grower of Blanche Ferry sweet peas in this country. Referring to remarks of a correspondent in the May 19 number of the AMERICAN FLORIST, regarding the mixture of an undesirable striped variety with the seed of Blanche Ferry, Mr. Allan says that the objectionable color is merely the result of overfeeding. He finds that the bone manure has been particularly liable to produce it, and says that if this fertilizer is avoided and the peas grown in soil that is not over rich the color will come all right.

Visiting Boston: Mr. W. H. Rand, representing Wm. Elliott & Sons, of New York.

The annual rhododendron show will open at Horticultural Hall at noon on Friday June 11 and close at 9 p. m. on Saturday. This is one of the most attractive of the exhibitions and always draws a large crowd of visitors. The silver cup offered by Mr. F. B. Hayes is for 50 trusses of not less than 12 hardy varieties of rhododendrons, instead of for 50 trusses of not less than 25 varieties as originally stated.

New York.

There is no special rush on account of Decoration Day here. The holiday coming on Monday is somewhat oppressive as regards the Madison and Summit florists, for Sunday is the big day and they have no convenient means of reaching the city with their stock on that day. So the Long Island and other growers get the best of them this year. The advance on prices of flowers is scarcely noticeable here. Roses are coming in in great abundance, the quality averaging fair to middling. Jacqs are not very plenty and hybrids are about finished. La France comes good and abundant. Beauties are plenty, especially the short stemmed ones. Carnations are in full supply. Outdoor valley is coming in heaps. Pæonies, deutzia and other outdoor stock which is usually in demand and hard to get for Decoration Day are very plenty this year on account of the very backward season.

By the time the June weddings are over the flower business will be over for the season, practically speaking. There is still a great deal of steamer work done. Hanft Bros. have some very attractive baskets in the form of steamers and full rigged ships for this use; they are white and gold, some mounted on a plain base and others elevated on a flat basket.

W. H. Brower has had some very good cornflowers at his store lately; they have had such a run with the milliners this season that they ought to take equally well in the natural form.

Gladiolus is getting more plentiful.

Some of the late May weddings—there were but few—were noticeable for the extensive use of dogwood flowers in the decorations. The effect was fine with a palm background. Another charming effect was produced in a church by the use of hawthorn and apple blossoms, with a palm background.

Some pretty dinner decorations were recently formed of roses, a large central basket being used while smaller baskets were placed in the front of each cover.

The porcelain and metallic funeral wreaths are specially called for around Decoration Day. Of course they never can be compared with natural flowers, but they are greatly improved of late years, and undoubtedly have their uses where real flowers would be impossible. Some of the porcelain flowers shown by

importers in this city are beautiful, but they are necessarily expensive. For cheaper trade immortelles and cape flowers are largely in demand, and in the hands of an expert they assume really handsome effects. Probably Le Moult has the largest trade in the city in this line, and it would be hard to mention an emblematic design which he could not supply.

Cape flowers are scarce. Reports from Europe indicate that none can be obtained in good quality until the next crop is ready. Reports from France are that the immortelle crop is slightly affected by frosts, but not to a serious extent.

Among good things noted at Elliott's auctions were the dwarf phlox sent in by A. C. Schroeter of Bayonne. Their compact habit does away with the stalkiness often seen in phlox, and they are a mass of bloom. A very useful thing; the pure white is particularly good.

Visiting New York: Miss J. Reiser of Buffalo, formerly in charge of Mr. D. B. Long's flower counter.

Baltimore.

Notwithstanding the press of work, there were twenty-one members present at the club, and they enjoyed one of the most interesting meetings we have had. Interesting, not so much from the importance of the matters discussed, as from the fact that everyone, even our worthy chairman, took part in the debates and expressed whatever views were held freely. One full member and seven associate or passive members were elected.

After hearing reports of the committee on fall shows and others, Mr. Feast started quite a lively discussion by offering $25 towards a premium of $200 to be given for the best table decoration at the show. Mr. Grebb almost immediately added $25 and then the speakers to the question rose one after the other and rose again until the whole matter was thoroughly examined from all sides. It was finally decided not to restrict the decorations to chrysanthemums, but leave the manner and material entirely to competitors, to make the nest egg of the subscriptions $50 from the treasury of the club, and to start a similar fund with the same amount as a premium for best mantel decoration. As a means of getting down to terra firma again after all this lofty work Mr. E. A. Seidewitz offered a premium of $5 for "the biggest plant of chrysanthemum grown in the smallest pot."

The only flower on exhibition was a tuberous begonia bloom of fine substance and color, 4x5 inches, brought by Mr. J. C. Berl. The first question taken from the question box was "What is the best material for benches?" and the answers were numerous. Slate, cypress, pine washed with crude petroleum, washed with whitewash, and with cement, all had somebody who believed in them.

The next question "What is the most profitable rose for forcing?" was answered "Perle", and for once nobody seemed to object. But there was some discussion on the following: "What is the best carnation for forcing?" as Hinze's White and Lizzie McGowan were both named.

Towards the close of the week business took quite an upward turn. Lily of the valley is not in the market at all, but its place is well supplied with Nymphæa odorata and a plenty of carnations. The amount of outdoor stuff, snowball, deutzia, weigelia and the like that is sold in the markets is something amazing, every market basket seeming to have its bunch of flowers topping the meats and vegetables. All the roses at the Exchange have been bought up clean, and barrels of snowball (Viburnum plicatum) besides, every day this week. Prices still are low though, and will probably remain so, at least until the June roses are done. Instead of columns of parties and receptions society papers have columns of seaside and mountain addresses of "le bon ton", and society florists are settling down to the dull season. MACK.

Washington.

The attendance at the regular meeting of the Florists' Club May 18 was not large, but included the most active members of the club.

An excursion to River View on the Potomac was mapped out and a committee appointed to carry it into execution, probably about June 15, that being the date thought most desirable.

The next subject of interest taken up was the chrysanthemum show. The various details of preparation were discussed, committees on securing a hall, on special premiums and on schedule were appointed, but the appointment of a regular executive committee was deferred for the present. From the remarks made by several members there is no doubt the schedule will be considerably revised from that of last year, experience showing us where it can very profitably be done.

The receipt of courtesies from the AMERICAN FLORIST and from the *Florists' Exchange* were directed to be acknowledged, and the meeting adjourned with understanding that probably a special meeting will be called soon to further consider the business now in hand. C.

According to Congressman Amos J. Cummings, of New York, the rarest plant in the Botanic Garden at Washington is a genuine corncracker that was sent there to Sup't W. R. Smith by Old Crow from his farm in Woodford county, Kentucky, in 1872. This aromatic American gem is the only one of its kind now known to exist, and it can not be propagated. Mr. Smith guards it so jealously that it has never been exposed to public view and visitors know nothing of it. But we have an idea that it may be one of the curios in store for us next August. In May, 1860, a larger specimen of the same variety was discovered by Old Crow and sent to Washington to Senator Crittenden, who also turned it over to Mr. Smith. But it died within a week or two after its arrival from over exposure, and was very deeply regretted by the honorable members from Kentucky who displayed the utmost interest in its existence and declared while it lived they smelt its subtle essence at the Capitol.

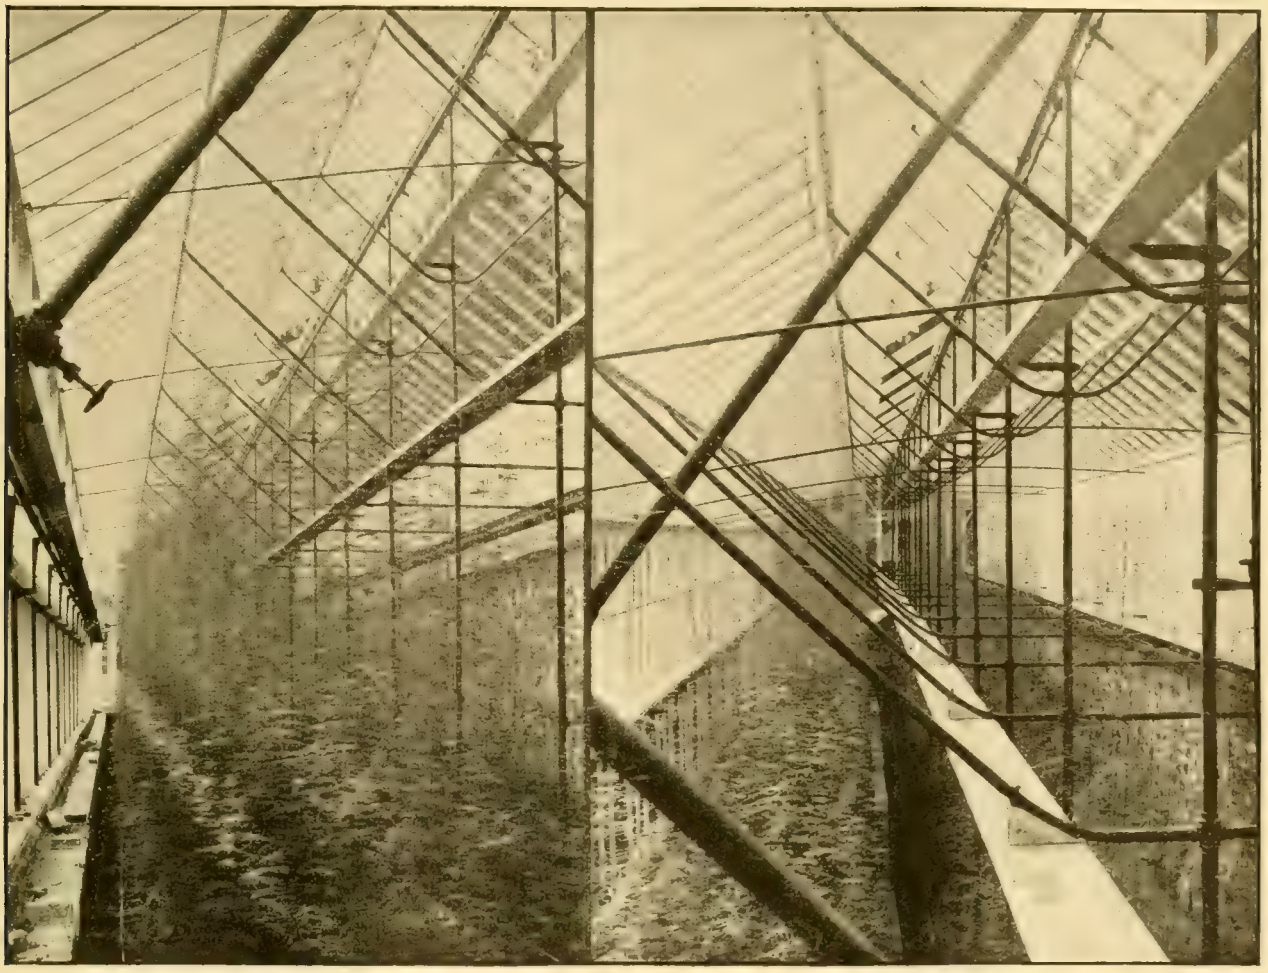
Government gardeners from the large propagating gardens under the War Department have begun to set out the 200 beds in the various parks of Washington. This work, which has been for 30 years in charge of Mr. George Brown, has long been famous for the beauty and novelty of effects attained. Especial care has been given to the preparations for this season's planting, because of the Grand Army encampment next fall. A large number of patriotic and military designs have been devised during the winter by Mr. Brown and his son. There has been some restraint upon the work because of the insufficiency of the last year's appropriation.

In the level lawn south of the pension building, which is 400 feet long from east to west, Mr. Brown will plant about 40 beds, 29 of which will be representations of the various army corps badges. One, the largest of them all, will be a Grand Army badge, with its flag and pendent star, crossed cannon and muskets, all worked out carefully in plants. This bed will be 60 feet long and 15 wide. Many of the beds will require very nice modeling. The ground will be raised and compacted to show special designs above the field of the badge.

The question of color is a difficult one. There are practically but two blue plants available for the work. These are the lobelia and ageratum. In the more northerly climates these two flowers can be used to good effect for quite a period of time. But here they would quickly bloom and go out of blossom, utterly spoiling the design in which they might play an important part.

The Washington florists are bowling every Tuesday evening at Russell's, on E street. Mr. J. R. Freeman is captain of the club, and the attendance at these games is generally very good. The championship games on the occasion of the visit of the S. A. F. next August will be played at Marshall Hall, on the Potomac river, during an excursion to that resort. During the playing of the last six months the best record has been held by Mr. Charles A. Small.

For Decoration Day an increasing demand for elaborate set designs was noticeable. A design displayed in the window of the Gude Bros., was a floral model of a full rigged man-of-war. It was ten feet in length and all the details were carefully worked out in immortelles. The hull was white with red keel; the ironwork blue and the deck lemon yellow. The masts and spars were olive and the ropes and tackle of white chenille. The capstan, steering wheel, anchors and port holes were red and gold. From the masts floated the admiral's pennant and silken stars and stripes. The design rested on a base of adiantum ferns. On each side of the hull appeared in blue letters "Potomac Association of Naval Veterans. Tribute to our shipmate." It was placed on Admiral Porter's grave at Arlington, May 30.



Philadelphia.

Robert Craig returned from Chicago last Thursday very much pleased with his trip.

Prices of flowers hold up very well when the small amount of business is considered. Saturday was about the only busy time of the week, quite a lot of work being furnished for Decoration Day. Most of the trade seem to have a lot to do for this occasion. Habermehl Bros. made quite a number of immortelle designs to be given to Grand Army posts; these were placed in the windows of some of the large stores on Chestnut and Eighth Sts. for a few days and attracted considerable attention.

Wm. J. Baker, one of our Simon-pure commission men (and we believe this city can boast of but one other), is nicely fixed in his new quarters 1432 S. Penn Square. He is at present wrestling with the refrigerator problem, and hopes to solve it before the weather gets much warmer. Carnations are his specialty and he handles a great many of them in their season.

John Westcott has broken a record on the club alleys, having made in three consecutive games 579 pins. The record 572 has been held by Lincoln Brown for about six months. K.

VIEW FROM BELOW — LOOKING DOWN FROM THE "GALLERY."

MR. ELLIOTT'S 25 FT. HIGH HOUSE OF ASPARAGUS PLUMOSUS.

House of Asparagus Plumosus.

We present herewith two views of one of the asparagus houses of Mr. W. H. Elliott, Brighton, Mass. This house is 100 feet long, 18 feet wide, 25 feet high, and will grow about 3,500 strings to a crop.

The views were taken when the strings were only half grown so as to show the construction of the house which was planned with the idea of getting extra long strings and also to have walks reach all parts of the strings so they can be trained and cut. Some doubt was expressed when the house was built as to whether the strings would reach the top, as it is Asparagus plumosus nanus that is grown which is supposed to be dwarf, but does not prove so in this case as nearly all the strings have reached the top.

Mr. E. is constructing two larger houses which will give him five houses devoted to this vine.

Chicago.

At the last meeting of the Florist Club a committee of three was appointed to arrange for transportation to the Washington Convention of the S. A. F. next August and the committee was instructed to endeavor to work up as large a delegation as possible and thus strengthen the chances of getting specially low rates and extra accommodations from the railroad people. It is hoped that a sufficient number will go that a special car or cars may be had, and if those in the west and northwest will arrange to travel with the Chicago party from this point it may be possible to arrange for a special train. All those intending to travel to Washington from or via Chicago and who wish to go with the main party are requested to notify the chairman of the Committee, Mr. G. L. Grant, 322 Dearborn street, Chicago.

The question of a bowling team to represent Chicago at the Washington tournament was brought up and after some discussion Mr. P. J. Hauswirth was elected captain and requested to select a team and get the members of same into training.

At the adjourned session some little training was done, but as he sized up the scores Captain Hauswirth was heard to emit a large and commodious sigh that indicated a realization of the monumental task before him. But there was not much strong timber present and he will make an effort to call out more promising stock on future occasions. Rumors are rife regarding some suburban members who rarely come to the meetings that are death on the pins, and day meetings will be arranged for so that these giants may be able to attend, and instill into the others enthusiasm and sprained backs.

Among recent visitors were Mr. W. A. Stiles, editor of *Garden and Forest*, and Mr. A. Hulsebosch, New York.

Montreal.

At the last meeting of the club here the most interesting part was the receiving of the prize money won at the spring show, and as every one got 100 cents on the dollar (which they did not expect) everything was "lovely" to the winners. Our system of awarding by points worked like a charm, the money being awarded by the same points and the first prize being restricted to 30% of the gross sum allotted for the section.

The flower trade has been quiet lately and owing to the cold late spring plants have only just commenced to move. The season is about two weeks late here.

Our ex-secretary, Walter Wilshire, has been seriously ill and is not yet out of danger, abcess in the head being the cause. Walt has had a tough time of it this winter and so has Alfred as he has had double work to do. The number of their store is 660 Sherbrooke street now instead of 688. Another new number is 230 St. Denis street (Montreal Floral Nurseries) instead of 128 as before. J. Bennett has moved across the street, his number now being 2392 St. Catharine street. H. A. Bunyard called here on his way back from the east and reports fair business.

The latest "fish" story here is that a party of four (Churchwood, Stanford and a couple of more) went out on the 24th inst. in a boat with rods and line, minnows, etc., for a day's fishing. Father St. Lawrence was not in a very gentle

mood it seems, for reports say that the "spray" had a most curious effect on some of the party, one wanting to get into the water and hook the fish on, another throwing the fish into the water after they were hooked, and having a time generally. It ended by the whole lot nearly getting along with the fishes. However, all got ashore safely, none the worse with the exception of being wet through and through. J. B.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. C. VAN LINDLEY, Pomona, N. C., president; W. J. PETERS, Troy, O., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY Franklin Grove, Ill., treasurer. The seventeenth annual meeting at Atlanta, Ga., June 1 to 3, 892.

Trees and Shrubs in Bloom on Long Island, May 27.

The weather has been cool for some time back and we have had a good deal of rain, and a week ago a violent storm that tore and battered the young leaves of the trees very severely. Still everything looks unusually clean and fresh and the trees are growing vigorously, even such laggards as yellow and honey locusts, catalpas and glyptostrobus are venturing to come out. Orchard tree blossoms are about past, but quinces are only in perfection. The flush of early flowers is on the wane; it is lilac and wistaria week, and next Sunday will be "Chestnut Sunday" with us. Many magnolias are in, out and coming into bloom, and so on.

THE AMERICAN CRAB APPLE (Pyrus coronaria) is not a very taking name of what is now the most beautiful little tree in our grounds and in the pink of perfection. Its blossoms are large, rose pink, in loose cymes and quite fragant, and come into full bloom when the Japanese floribunda and Chinese spectabilis pyruses are about past. This is a tree that highly deserves planters' recognition.

HORSE CHESTNUTS.—The common white flowering one is in full bloom, so too is the red, but the double flowered varieties, although in flower, are later than the single ones, and they last longer. The dwarf species won't be in bloom for some weeks.

FLOWERING DOGWOOD.—Cornus florida has been in fine bloom for a week or more. Some of the other cornuses, alba, for instance, are also in bloom, but they are hardly worth growing for their blossoms; some are valuable on account of their red barked wood, and others because of their handsomely variegated foliage.

DEUTZIA GRACILIS is just beginning to open. Won't that be joyful for Decoration Day! But it is a strange fact that outdoor grown deutzia flowers do not last as well when cut as do those from forced plants in March or April. Deutzia parviflora in upright habit and umbels of white blossoms along its branches resembles a spiræa, it opens at the same time as D. gracilis and is a real worthy shrub.

NEVINSIA ALABAMENSIS is in its best bloom. Its flowers consist of bundles of feathery white stamens and are clustered into wreaths along the branches of last year's growth. Although not now rare in gardens, in a wild state it is found only in one locality, Tuscaloosa, Alabama. It is quite hardy here, however, grows 5 to 7 feet high and has upright, arching shoots, now clothed with fleecy wreaths.

BIRD CHERRIES.—Prunus Maackii is out of bloom some time, P. Padus, the European bird cherry, is nearly over, P. demissa is opening, and P. serotina, our common wild bird cherry, has not yet come to its flowering state. But the lesser Prunus Virginiana, our wild choke cherry, is at its best and quite pretty in its way. Another shrub also called choke cherry, namely, Pyrus arbutifolia var. erythrocarpa, plentiful wild and pretty in cultivation, is in full bloom or fading.

THE MOUNTAIN ASH in variety, upright and weeping, is in its hey day, and although its horticultural value depends chiefly upon its ornamental red fruit in late summer and fall (remember them in the streets and gardens of Toronto last August?) as flowering trees in early summer these trees also have decided merit. But on Long Island, how the borers love them!

SNOWDROP TREES (Halesia).—H. tetraptera was in splendid form a week ago and is fairly good yet. Well shaped tree-formed plants are handsome objects, but the scrawly scrub trees of it we often find choked in shrubberies are sorry representatives of shapely specimens. H. Meehani also is in full bloom. H. diptera is hardly open yet. The flowers of Meehani somewhat resemble those of tetraptera and are more numerous but hardly as pure white or pretty; its leaves approach those of diptera. None of the Halesia hispida section is yet in bloom.

CORONILLA EMERUS, in English Scorpion senna, is a dense, branchy little bush 3 to 4 feet high and more across, and just now completely smothered in little yellow pea flowers, making it a very striking and beautiful plant, and a fine thing in the front line in shrubberies. It is indigenous to Southern Europe and quite common there in cultivation; and many of our importers here when they get a mixed collection of shrubs from France are most sure to get this plant because it is very cheap over there. But being such a little thing in its infancy and a trifle tender it is apt to die down a little, get neglected and lost. If one takes care of it for two or three years, however, it waxes strong and becomes perfectly hardy at New York.

WEIGELIAS.—Some of the rosea are in full bloom, but many of the varieties have not yet opened a bud. By the way, they got pretty badly injured last winter. These Chinese and Japanese plants and their varieties are very showy garden plants, but when it comes to the American species, say trifida, except for variety's sake what claim as an ornamental plant has it got upon us?

THE TARTARIAN BUSH HONEYSUCKLES and like species are in full bloom. They are easily grown, exceedingly floriferous, hardy shrubs, with a double beauty of showy ripe fruit in midsummer. Splendens is about the finest in flower and Ruprechtiana and Morrowii in fruit. A good deal of fuss has been made of the Californian Lonicera involucrata (Ledebourii), but, really, I fail to find much merit in it as an ornamental plant.

CHIONANTHUS RETUSUS is the Chinese fringe shrub, the prototype of our American fringe tree, C. Virginica. Its flowers are white, not unlike those of the American species, and now in full bloom—long before the flowering time of its western relative. But the whole plant is small, meagre perhaps, and although a pretty little shrub it can never rival the American white fringe tree in favor, fullness or beauty.

THE FLOWERING ASH (Fraxinus Ornus) is coloring white and scenting the air for some rods around. It is a little broad-headed tree, studded all over with large showy bunches of white, fleecy flowers. The Himalayan species, if distinct species it is, F. floribunda, also is in bloom. Its leaves may be long and leaflets narrower than those of Ornus, but otherwise to the general observer they are much alike.

TAMARIX AFRICANA is the name of the species now in bloom, no matter how many other names you may find it sailing under in catalogues. Its long fleecy pink wands are both striking and beautiful; in a couple of days they will be at their best. As soon as the blossoms begin to fade we cut back the shoots as we do those of forsythias or fragrant bush honeysuckle to keep the plants in good form and insure a crop of fine shoots for next spring's work.

HAWTHORNS are in fine bloom. The single flowered varieties are at their best, and delightfully fragrant; the double flowered forms are barely in their prime. The double varieties although exceedingly beautiful are scentless, and in this way as dissapointing as the single sorts are gratifying. Our native Cratægus coccineus and its varieties are pretty well past. Where they thrive they are beautiful in bloom and handsome in fruit. The cock's spur thorn comes later. Under the name of C. grandiflora we had from Spath, of Berlin, some years ago a very handsome little tree both in leaf and bloom. Its flowers are white, 1⅜ to 1½ inches across, singly or sometimes two together, and slightly fragrant.

XANTHOCERAS SORBIFOLIA, a tree-like shrub 5 to 7 feet high from northern China is now in fine bloom. The flowers are white stained with red at base, and borne in 4 to 8 inches long upright racemes, and these racemes in great numbers and bunched together near the ends of the branches. As a shrub it is a beauty; but the flowers don't last long and are of no use when cut. Raised from seed which old plants produce in moderate quantity.

CHINESE WISTARIAS, blue, and white, are in the hey day of their loveliness or a little past their best. We have several large tree-stemmed plants with broad umbrella-like heads which are very pretty. What we call W. japonica (determined for us by Thomas Hogg who examined it here) has begun to bloom. It has blue flowers on long pendent racemes and which open several days later than those of Chinensis; the vines are also closer growing and much more leafy. The Japanese wistarias, however, may be all right on paper but there is an ugly confusion among them in the garden.

LILACS are now in great perfection. In olden times we had little more than the common lilac and its white variety and the Persian lilac and its white form, but nowadays we have a hundred or more fixed varieties, single and double flowered, and several fine species. We have many bluish purple varieties among the newer ones, but it is not an agreeable hue. Marie Legraye is the finest white lilac I ever saw, and Souvenir de L. Spath the darkest red and best of the dark ones. Both are in splendid bloom with us now. I wonder if this last named variety is the same as Ludwig Spæth of some catalogues? Frau Dammann and alba grandiflora, both now in bloom, are splendid white lilacs. Charles X, a dark variety much grown for forcing, makes a capital garden plant, but I can not say that I

appreciate what we have for rubra de Marley as highly. Rubra grandiflora is a fine red with large flowers, and Rubella fl. pl. about as good as any of the large flowered double ones. The double flowered hyacinthiflora is on the wane, very distinct and would be an acquisition had it some more pleasant color than bluish lilac. Lemoinei fl. pl. with larger trusses and florets is a bolder and handsomer flower with just as poor a color. The "scarlet" Siberian (Rothomagensis rubra, or maybe to be more exact I should say Chinensis, var. rubra) is the prettiest of our Persian lilacs. Syringa pubescens, a species from northern China, is just now the most beautiful and grateful lilac in our collection. It forms a medium sized round bush and is completely covered with short panicles of narrow tubular rosy lilac, deliciously fragrant blossoms.

PAULOWNIA IMPERIALIS is in full bloom. The flowers are violet blue, large like those of a foxglove or gloxinia, in open terminal panicles and precede the enormous foliage of this Japanese tree. Among our hardy trees we have no other blossoms like unto these, still their color is so unobtrusive that one has to get near the trees to see them, they have no mark in the landscape as those of a horse chestnut or dogwood has.

VIBURNUMS.—V. Lantana and its variety rugosum and lantanoides are pretty well past. V. prunifolium, common every where by the roadside, is in splendid form and makes one of the showiest garden plants of its season, its commonness is its only fault. V. phlebotrychium from Japan has hornbeam like leaves and umbels of beautiful clean white flowers that are now dropping. Just now another Japanese species is in splendid condition, though hardly in full bloom yet. We first knew it as Japonicum, then as Japonicum latifolium, then as reticulatum, and now I believe we have got to call it Sieboldii. It makes a vigorous shrub 10 or more feet high and has large, bold, plicated foliage and ample cymes of showy, white, bad smelling flowers.

SNOWBALLS.—We have three, namely, the American (Viburnum Opulus sterilis), the round leaved (V. rotundifolium) from Japan, and what is commonly called the Japanese snowball (V. plicatum), and all three are decidedly distinct from each other and desirable. V. rotundifolium is now milk white, V. Opulus greenish white, and V. plicatum whitish green, showing two or three day's time of difference between their full bloom time. Rotundifolium may pass for a brown stemmed, spreading, early form of plicatum. It is generally sold as the variegated leaved Japan snowball, but the variegation (marbling and streaking with yellow) appears only here and there on a twig or a leaf and never over all the bush. The variegated ginkgo is another similar case of irregular variegation. The partly sterile flowered species are not advanced enough to notice in this paper.

AZALEA AMŒNA is perfectly hardy with us and we make a hedge border of it around our group of deciduous azaleas. It was in perfection a week ago and is in fine condition still; hardly a leaf was to be seen or a gap anywhere on account of the profusion of glowing purplish crimson blossoms. It is perfectly hardy with us but impatient of drouth. The Ghent azaleas have begun to bloom beautifully and their flowers would be very serviceable too were it not for the bumble bees which puncture and disfigure them. Among evergreen rhododendrons only one here and there has ventured into bloom.

TWO LEUCOTHOES, namely, racemosa and Catesbæi, are in full flower; they belong to the heath or huckleberry family and have a profusion of small white bell shaped blossoms. Catesbæi is, by a good deal, the prettier plant of the two, an evergreen, and loves moist, faintly shaded ground. It is really a good thing to handle, but suggests a stout herbaceous plant more than a hard wooded shrub.

TREE PÆONIAS.—Turn up Pæonia in your dictionary and see what a lot of species there are. Now lest you get bewildered among them shut up the book and come into the garden with me. That vivid crimson beauty, single and double, with the finely cut foliage is the herbaceous tenuifolia from Siberia. That big double crimson beauty with the heavy foliage is the same my grandmother had in her garden most a century ago; it is herbaceous, a form of P. officinalis, and still the finest of its race. There are the tree pæonias proper, they come from China and Japan and are the earliest to bloom. The doubles are and have been for many years very popular. Those enormous wavy single beauties came from Hallock of Long Island and from Mrs. Berger, of California, who imported them from Japan. Aren't they splendid? And see how vigorous they are. The flowers are pure white, silvery pink, to bright red and crimson, and 9 to 11 inches across, and they shut up at night. That purplish crimson one you see so much of is the stock on which the Japs had grafted the elegant gems above them, and as they too were so pretty I let them also grow.

WM. FALCONER.

Some Law Points Wanted.

ED. AM. FLORIST:—I should like to ask the nurserymen and florists of the U. S. to furnish me with any precedents, or any rulings or decisions of the courts, bearing on the following point or points:

I have a nursery, fronting 227 feet, (that I have used as such for over 26 years and owned over 20 years) on a then country road 60 feet wide. It was subsequently taken into the city limits and came of course under municipal control.

Recently a lot of speculators have bought up a frontage of half a mile or so and have had an ordinance passed (which as "owners of a major portion of the front feet" they had a perfect right to do under our "scheme and charter") condemning 20 feet on each side, making a 100-foot street which they intend converting into a boulevard. All this I have no objection to, because I know they have the right and the power. Commissioners have been appointed to assess benefits and damages and I am led to expect that I am to be found as much benefitted (by reason of future enhancement of values) as damaged.

Now the point I make and claim is this: That my case differs entirely from the speculators who want to enhance the value for selling purposes. I don't want to sell but want to hand down this front to my son to continue my business as long as he can. Hence how will the enhancement benefit me? But the main feature that I claim is that I ought to have full pay at present value for the land taken, on the ground that it is my factory, wherein I manufacture—i. e. grow—my products. I look upon it as though it was just so much invested in brick and mortar. Space is my factory (and I have often seen it alluded to as such in your and other trade papers) and the soil might be likened to raw material, which could be easily added if taken away, while space could not.

If A is a florist or nurseryman and has a piece of ground condemned for any public use, worth say $1,000, and B has a factory, a wagon shop, or any other building worth the same, the commissioners would not hesitate to say that he must be paid full damages for the loss of his shop and land on which it stands, hence I can not see why the florist should not be paid for his land on the same principle. Must I be compelled to donate my land under the guise of benefits when I shall be compelled afterwards by law to pay for expensive improvements, as granitoid sidewalks, gutters, etc., wooden pavement, grass plot in the center, etc., all of which I really do not want in my business and which I think will not benefit me in that—but would welcome if I wanted to sell.

I think there must be lots of precedents to be found and I should be glad to find out what is the rule in such cases in different parts of the U. S., if brothers in the trade will kindly furnish it.

I have also hedges—a Pyrus Japonica hedge 20 years old, but well kept, and numerous other specimen trees and shrubs that have served as advertisements of my business for years. How about these?

St. Louis, Mo. C. SANDERS.

MADISON, WIS.—Mr. J. A. Tormey has established nurseries here to be known as the Madison Nurseries.

A PATENT for a machine for baling trees has been granted to Henry A. Thomas, North Bend, Nebraska.

COLORADO is preparing to show small fruits in bearing at the World's Fair. The plants will be grown in pots. It is intended to show in this form 125 varieties of strawberries and 35 varieties of other small fruits.

St. Louis.

The weather has been fine the past week and flowers are much improved. Roses are unusually fine for the season. Pæonies in abundance from outdoors. Outdoor roses are coming in and will be in full bloom by the end of the week. Prices are holding good and all good stock is being disposed of.

J. C. D.

Lower Freight Rates from the Pacific Coast.

The freight rate on bulbs from San Francisco to all eastern points has been reduced from $4.20 to $2.50 per 100 lbs. Certainly a very heavy cut and one that will considerably cheapen to the trade the many bulbs that come from Japan via of San Francisco. This heavy reduction has been made in response to special exertions on the part of Messrs. H. H. Berger & Co., of San Francisco and they are certainly entitled to much credit for same.

A CARNATION bloom of the Wilder type has been received from Mr. W. Knuth, with the W. D. Allen Floral Co., Summerdale, Ill., who states that it is a cross between Grace Wilder and Tidal Wave, and that it is a good grower and bloomer. The color is a very pleasing shade of pink, the flower was of good size and with perfect calyx.

YOU CAN never invest $2 to better advantage than in a copy of our new trade directory and reference book.

Do YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a strictly temperate and reliable single man, well up in the cultivation of chrysanthemums, aquatics, roses, carnations and general greenhouse plants. First-class references. Address W H B, care Wm. Tricker, Dongan Hills, S. I., N. Y.

SITUATION WANTED—By a first-class florist; German, single, 25 years of age; excellent knowledge in growing roses, carnations, cut flowers, propagating palms, general stock and well up in design work. Best of references. Address Box 1532 Postoffice, Salt Lake City, Utah.

WANTED—For Chicago, good man on ferns and palms; also a first-class cut flower grower. $12 per week. Address M. BRAUN, 1290 N. Halsted St., Chicago.

WANTED—A man to take charge of a commercial plant of 14 greenhouses, to grow mostly cut roses and small rose plants. Prefer married man. Must have good references—others need not apply. Address LAROCHE & STAHL, 1237 Chestnut St., Philadelphia, Pa.

FOR RENT—Greenhouses, either with or without dwelling. Address VIRGINIA, care American Florist, Chicago.

FOR SALE—Greenhouses and stock. For particulars, address W. S. SAWYER & Co., Lincoln, Neb.

FOR SALE OR LEASE—Greenhouses and dwelling, with or without market garden attached. Address VIRGINIA, care Am. Florist, Chicago.

FOR SALE OR LEASE A growing business, with greenhouses, dwelling and ample grounds. Address VIRGINIA, care American Florist, Chicago.

FOR SALE Six greenhouses and stock. Wholesale shipping trade, growing rapidly. Good opportunity for wide awake florist. Reason for selling, poor health. WHOLESALE, care Am. Florist.

FOR RENT—Five brick greenhouses, already stocked; one 20x40, three 20x60 and one 13x30, with 6-room brick dwelling, nicely located in city of 65,000. Address C. G TURNER, 1513 Franklin St., Wilmington, Del.

FOR SALE—Rose growing plant containing 25,000 square feet of glass with property, situated 25 miles from New York City; stock and houses in A1 condition; plants are growing for next season's planting, mostly Am. Beauty and Safrano. Will sell on easy terms. Address ROSE GROWER, care American Florist.

FOR SALE—Well established and centrally located florist business, including residence, lot 100x134, greenhouses, boiler, etc., and choice stock, in a city of 50,000 population. Reason for selling, death of late proprietor. A splendid opportunity for a man of small capital. For further particulars address, FARMER & FARMER, Solicitors for administratrix, Hamilton, Ontario.

FOR SALE.

Nine greenhouses containing about 16,000 feet of glass, ½ cast double glass; all houses rebuilt 4 years ago; heated by hot water use city water for watering 2 acres of land, 1 brick dwelling house with 8 rooms, 1 frame house of 4 rooms, stable, horse, harness wagon, etc. The above property is located in one of the best commercial cities of the west, with a population of over 60,000, and within 1¼ miles of city hall; electric cars pass every 6 minutes direct to city hall and Union depot. The greenhouses are well advertised and enjoy a good patronage at home and from abroad, and now contain a good stock of cut flowers, decorative and bedding plants. Poor health causes owner to retire from business. Would also be willing to sell greenhouses and stock and lease grounds and one dwelling house for a number of years, with privilege to purchase at a fixed price when lease expires. A bargain to a man with small capital. Address BUSINESS, care American Florist, Chicago.

GARFIELD PARK ROSE CO.,
1688 W. Madison St., CHICAGO.

Always mention the AMERICAN FLORIST when writing to advertisers.

YOU will hear it stated that large size Romans are scarce—perhaps they are—yet there is no scarcity with us, **as yet** and no advance in prices. See pages 8 and 9 of the price list we sent you recently.

Do not fail to include in your order some of Gardiner's prime stock of Double Von Sion. You may be offered at lower prices, but they are nothing like ours in quality, and are very possibly spurious stock. Ours is the genuine, **TRUE VON SION** double trumpet daffodil and will give you splendid returns. See pages 15 and 16 of our price list.

Would also like to call your attention to the very low figures at which we offer Freesia Bulbs (page 6) and Lily of the Valley, Gardiner's XX 3 year Berlin (page 4).

REMEMBER you have everything to gain and nothing to lose by sending us a memorandum of your wants in this line **NOW.**

We import by the fastest steamers direct from the bulb growing districts, thus insuring **EARLY DELIVERY.** Being direct importers as well as growers, you have no middleman's profit to pay, and you can thus depend on getting the best quality stock at the **LOWEST POSSIBLE PRICES.**

Address THE AMERICAN FLORIST CO., Chicago.

A GENERAL INTRODUCTION.

There has been some little complaint of the difficulty of identifying those we would like to meet and become personally acquainted with at the annual conventions of the Society of American Florists. Various plans to make identification easier have been suggested, but all have either been impracticable or have had some objectionable feature that militated against their adoption.

The AMERICAN FLORIST proposes to solve this problem in a way that will we believe be eminently satisfactory to every member of the society, and without any expense to that organization. Our plan is to print in our convention supplement portraits of every member of the Society of American Florists who expects to be present at the Washington meeting. Of course, in order to give space to such a large number, each one will be reduced in size, but they will be good portraits and large enough so that the originals may be readily recognized from them. These portraits will be numbered consecutively and the names given opposite their respective numbers on an adjoining page, and there will also be given in the supplement an alphabetical list of the names, referring to the portrait by number, so that reference from and to the portraits will be quick and convenient.

If you expect to be present at the Washington meeting next August, and are a member of the Society of American Florists, or expect to join at Washington, please send us a recent photograph of yourself, cabinet size preferred. If you have no recent photo, have one taken. This should be attended to now, for with the great amount of engraving that will have to be done we must have the photos in hand by July 15 at the latest. And do not send photos that need to be returned to you as they will have to be cut in arranging in the groups. If you have a good recent photo send it in to us now, always writing name and address on the back.

ALL THE WAY from Tacoma, Washington, comes a lot of chrysanthemum flowers from Mr. Albert Herbert, of the Wapato Lake Park Greenhouses. They arrived in very fair condition considering the length of the trip. The varieties were Christmas Eve, Tensia, Venus, Brazen Shield and Magnet. Mr. Herbert writes that he has had chrysanthemums in bloom from last September up to date.

WE HAVE received from Messrs. H. Weber & Son, Oakland, Md., a dozen blooms of Hinze's White carnation, each 2½ inches in diameter and with stout stems fully two feet long. They were very fine.

NEW CROZY CANNAS

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., June 14—16. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

WESTERN MEMBERS who propose attending the Annual Meeting of the Seed Trade Association at Hartford, Connecticut, are invited to arrange to meet President F. W. Barteldes at the Sherman House, Chicago, either Saturday night, June 11th, or latest Sunday morning June 12th, that a party may be made up for the trip from Chicago to Hartford.

WORCESTER, MASS.—J. A. Rice, seedsman here, expired suddenly in his store the morning of May 20.

News Notes.

INDIANAPOLIS, IND.—Mr. John Gird has gone into partnership with Mr. L. Schwartling at 21 Lexington avenue.

DECATUR, ILL.—N. Bommersbach intends rebuilding part of his greenhouses and adding two new rose houses. Business good.

ONEIDA, N. Y.—Easter trade was about 15% larger than, and prices about the same as, last year. Supply was good and quality fine.

LINCOLN, ILL.—Business good locally, but impossible to ship on account of the floods. Many trains taken off and no direct communication.

THREE RIVERS, MASS.—Alfred B. Copeland has removed here from Springfield and will grow violets and hardy herbaceous plants as specialties.

PITTSBURG.—The contract for the new conservatories at Schenley Park has been awarded to the Lord & Burnham Co. The contract price was $101,334.

SPRINGFIELD, ILL.—Florists look blue on account of the wet weather and backward season, with their greenhouses full. Decoration Day coming, hundreds of vases to fill and no place to put them. Certainly it is aggravating to say the least. Chas. Hay has some fine specimens of Cattleya Mendelli in bloom.

Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in. stuff in fine condi ion	100.00

Cut Flowers.

For the balance of this month we offer

ROSES—Brides and Mermets	3 00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00
Smilax—Good, clean, heavy stock	15 00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this. Stock guaranteed A1. No charge for packing.

ADIANTUM CAPILLUS VENERIS—
The coming Adiantum for the cut flower trade. The reasons why because it is
Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.
Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.
Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.
In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

Society of American Florists.

Members of the Society of American Florists who have knowledge of any deaths in the ranks of the society during the past year are earnestly requested to forward to the secretary the names of such deceased members with date of death and any other information appertaining thereto which may be thought desirable. The membership of the society extends over so wide a territory that excepting in the case of the more prominent members it is a difficult matter to keep an exact record of deaths without some assistance from the members, and it is most desirable and proper that at our annual gathering we should pay this small tribute of respect to our late associates, not forgetting any.

WM. J. STEWART, Sec'y.

IF you have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of 'Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100.

PRICE OF STAR OF 1891. $45.00 per 100.

Colored plates of Madame Crozy mailed free. Can be supplied in any quantity. Trade lists on application. Address

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON, NEW YORK.

What Plants are Dutiable.

ERIE DESPATCH ET AL, AGAINST THE COLLECTOR AT NEW YORK.

Opinion by Sharretts, General Appraiser, February 18, 1892.

The merchandise covered by the numerous protests now under consideration is live plants, imported subsequent to October 1, 1890.

The appellants claim that the plants in question are of the kind usually grown under glass, for cut flowers or decorative purposes, and entitled to free entry under paragraph 666 of the free list of the said act. At the hearing of these protests, experts came before the Board and testified relative to the character of the plants. Affidavits and statements have also been received from the principal florists and nurserymen throughout the United States relative to the goods in question, based upon which we make the following finding of facts:

1st. That the following plants, namely: Rose plants, heaths, chrysanthemum, Vallota purpurea, ferns, Dielytra spectabilis, lilacs, primula, spiræa, deutzias, philadelphus, are of the kind that are chiefly used for forcing under glass, for cut flowers or decorative purposes.

2d. That the following plants, namely: Clematis, delphiniums, peonies, hydrangea, Abies excelsa, kalmia latifolia, Andromeda floribunda, aristolochia, gaillardias, hollyhocks, Iris Kæmpferi, pyrethrums, weeping trees, Cratægus Oxyacantha, are commonly known as nursery stock, and although many of them may be temporarily grown under grass, they are so grown in order to insure their successful propagation and not for cut flowers or decorative purposes.

Based upon the above findings, in accordance with the principles enunciated in G. A. 477, we sustain the protests as to the portion of the goods covered by our first finding of facts, and affirm the action of the collector as to those covered by the second finding.

As to the remaining plants covered by these protests, viz: Acer, Forsythia viridissima, pteleas, codrentheria, taxus, no testimony having been offered by the appellants to sustain their contention that they are free of duty, we hereby sustain the action of the collector.

We further find that the Act of March 3, 1883, has been duly repealed, and that the Act of October 1, 1890, is constitutional, was duly and legally enacted, and is in full force and effect.

Another decision of same date places rhododendrons on the free list.

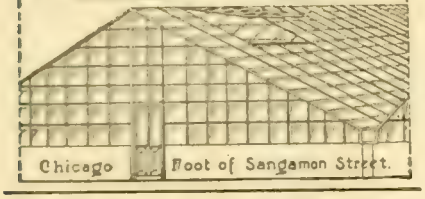
Horticultural Education.

A pleasing sign of the times is the action of the Leland Standard Junior University, Palo Alto, Cal., in the establishment of a department in which may be obtained a broad education in horticulture and floriculture. We are advised that no less than $50,000 a year will be expended upon this department alone and that the very best talent in the country will be gathered together to form the staff of instructors. Further, that every division of horticulture will be thoroughly covered—even the minute sub-divisions of floriculture—and that no expense will be spared to make the work thorough and practical as well as broad.



Mr. Emory E. Smith has been appointed to the chair of horticulture at this university and is now collecting together the materials to carry on the work that has been mapped out.

We are informed that the university has an endowment of $20,000,000 and that it will be made in time the greatest educational institution in America.

Do you WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

FLORISTS WIRE DESIGNS

MANUFACTURED BY

N. STEFFENS

335 EAST 21ST ST. NEW YORK.

PAINT. DISTANCE NO OBJECTION. Since 1875 we have been grinders of Paint. We now offer a line of Paint for ALL STRUCTURAL PURPOSES on Wood, Brick, Stone, Iron or other metal. Whether for Dwellings, Greenhouses, Barns, Roofs, Bridges, etc., in colors suitable for any desired location or building.

☞ The paint is guaranteed to give an elastic, lustrous surface; to retain this condition longer than commonly is done. This lustrous property preserves the color, defends the body of the paint from speedy atmospheric wear; strongly resisting the effect of the sun's heat, consequently we believe we offer the most durable paint for use in the American climate, at a fair and reasonable price, not too high to debar its use for average purposes and pockets. WE NAME PRICES DELIVERED AT YOUR RAIL ROAD STATION.

GEM STEEL GEM WIND ENGINE AND GEM STEEL TOWER

The GEM ENGINE, when furnished with Graphite Bearings, requires no oiling, no climbing of towers, no hinged or frail-jointed towers and practically no attention, yet is more durable than other Wind Motors that require all this and more unique in finish. The GEM TOWER combines beauty, strength, durability, simplicity to the greatest extent and has no equal. Both are manufactured and guaranteed by the oldest and most reliable Wind Mill Company in existence, and who build the Halladay Standard Pumping and Geared Wind Mills, the Standard Vaneless and U. S. Solid Wheel Wind Mills, Pumps, Tanks, Horse Hay Tools, &c. No other company offers equal inducements. Send for Catalogue and Prices.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

A Case for the Nomenclature Commiitee.

Mr. H. Tong writes that several chrysanthemums raised by him, and of which he held the entire stock up to last fall, were offered to the public in the catalogue of an English firm before he had permitted a single plant to go out of his possession. At least the names he had given the plants and had registered with the American Chrysanthemum Society were used, and in response to a query sent to the firm by a friend at his suggestion they referred to the varieties as American chrysanthemums. Looks as though we should have an international nomenclature committee to attend to such cases.

A Curious Idea in Propagating.

Among recent curious experiments in propagating was one tried by a Dayton florist last summer. He was endeavoring to propagate roses in August and he proceeded as follows: He placed on the bench about two inches of cow-manure and over this about two inches of sand, and then put the cuttings in the sand. We had never before seen any kind of manure used for indoor propagation and the result was watched for with some interest. But it was a failure. The sand turned as black as the manure and the cuttings eventually did the same.

Dayton, Ohio. G. OBERMEYER.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date or introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

PITTSFIELD, MASS.—The Berkshire Co. Gardeners' and Florists' Club will hold a chrysanthemum show at the Coliseum early in November.

NORFOLK, VA.—W. I. Dickerman, of 65 and 67 Granby street, has made an assignment to I. A. Page. Amount of liabilities not stated.

ERIE, PA.—The Erie Chrysanthemum and N. W. Penna. Hort. Society will give its fourth annual Chrysanthemum show and floral exhibition about the second week in November next.

Vines for the Retail Trade.

Climbing, creeping, or trailing plants are constantly needed in the bedding trade, and yet we often find a scarcity in this useful class. One reason is no doubt the amount of room taken up by them; a man growing market stuff in quantity must economize space, and vines cannot be crowded beyond a certain degree. Nor is there a very great variety of such stuff grown; we don't seem to have a very great range of choice in the matter. There are comparatively few novelties introduced, and many of the older plants fall into disuse until some bright spirit revives them.

Among hardy climbers there is nothing to excel Ampelopsis Veitchii; it leads all hardy vines in New York and vicinity, and its sales this year are larger than ever before. Its deciduous habit is very greatly in its favor, many objecting to the true ivies on the ground that they make a house damp in the winter. Of its beauty, both in summer and autumn, little need be said; it certainly excels all other rooted climbers in our climate. Our native ampelopsis gives good results; one of the best examples of its use is the Pennsylvania railroad cut entering Jersey City, where the rocks are beautifully covered with it, but it seems more inviting to caterpillars than the Japanese variety, which is rarely bothered by them. A common error is in selecting the larger plants of ampelopsis; the best results are obtained by using small ones, as they always begin to take hold from the bottom. They often seem to make very little headway for a season or two, but as soon as they do start they go with a rush. The finest growths of the Japanese ampelopsis may be noted on brick or stone, with a southern or western exposure.

Another hardy vine for which we are indebted to Japan is Akebia quinata, which is not common, though an old thing. This is not a rooted climber, needing support; it is fine to cover a summer house. The odd little reddish purple flowers are very fragrant and freely produced, and the foliage is very abundant. It stands our severest winters and occasionally fruits here.

The many varieties of hardy clematis are too well known to need description; they form necessary stock in a retail business, being constantly called for where they are known. They are healthy, showy and hardy, and make a most satisfactory permanent covering for porches and piazzas.

But it is in the summer bedding trade that the retailer finds the greatest call for climbers, and there is often quite a scarcity of stock. They are needed for so many different uses; vases, boxes and baskets, in addition to covering trellises, porches or walls. For the purpose last named the true moon-flower seems one of the most desirable things we can use; it is handsome, healthy, and seems little liable to the attacks of insects, but it cannot be used in all localities. In the north and north-west it does not give the satisfaction obtained in the latitude of New York, being checked by the shorter season and colder nights. Still, it is a fine thing, and a salable thing, too, the name alone proving a recommendation to many buyers. There is a variety with variegated leaves now on the market.

Another trellis climber which has proved both salable and satisfactory since its arrival, is an old thing which had dropped out of sight, Solanum jasminoides. It flowers continually when planted out, or when indoors, and its starry white bloom sells it readily. It is suitable for trellises or piazza; it does not droop sufficiently for vases or baskets.

One of the old things which is always called for is Cobæa scandens; it is always in use, and used in quantity, too. We do not see so much Maurandya now as formerly; it has been dropped for awhile, though a little has been seen in the market this season. It is an eminently useful thing, as well as a pretty one.

In New York City we rarely see any vine used in bedding except ivy and variegated vinca. This gives a certain monotony to the vases and window-boxes, though there is no doubt that for city use these two plants give more satisfaction than any others, and then they make a big show from the start. We see scarcely any of the fancy ivies used, that is to say the true ivy, Hedera, though there are some charming variegated sorts one would imagine readily salable.

This season one of the vines sold in quantity was Lophospermum atrosanguineum. It belongs to the same family as the maurandya, having handsome cordate leaves and beautiful bell-shaped flowers, rosy purple in color. It is a very useful and showy thing.

Several of the torenias will be found useful in drooping situations, as in baskets. The well-known T. Asiatica, with its plentiful china blue flowers, will be found desirable, blue flowers being both popular and uncommon. The common thunbergias are useful, too, usually flowering very plentifully.

The little, old manettia, too, may be found serviceable, giving a variety, though, unless covered with bloom, the plants are apt to be rather scrubby in appearance.

Though the commonest of all things, the retailer will find it a convenience to have a few patches of Wandering Jew (tradescantia) about the place; it is very handy to cover up the bald spots. Of course, preference should be given to the variegated forms, either the light green and white, or the dark reddish green stripes. Bits of it can be stuck into a box

or basket whenever needed, and there is no need to think about propagating.

It is not always easy to buy vines for bedding use when needed, but a retailer can generally judge what he is likely to need, and run in some useful stuff from seed as space allows. The plants must be kept in good order, though, being properly trained and kept in shape; few things are more aggravating than to pick out half a dozen pots in a hurry, and then find that the whole bench-full is matted together. This need for both space and attention is doubtless the reason why so few grow summer vines extensively.

EMILY LOUISE TAPLIN.

Beautiful Crotons (Codiæums).

There is always something interesting to be seen at the establishment of Mr. Craig, whatever time of year one may chance to look through the extensive range of glass which that genial gentleman owns and operates. To a commercial florist this is especially the case, and there is generally something of interest even for an "onlooker" like myself. The star attraction at present for amateur and professional alike is the display of crotons (or codiæums, as the experts now call them). Two of Mr. Craig's largest houses are devoted to them and they make about as fine a showing as one could wish to see. One house is filled with plants ranging from 12 to 18 inches high, the other is used for smaller plants and for propagating.

Ever since Mr. Menge, the gardener at Fairmount Park, showed us the grand effect that could be obtained by the use of these fine foliage plants in summer bedding, the public has taken great interest in them and Mr. Craig is one of the first who has made a point of catering to the want thus created. I jotted down a list of those varieties which have been found most suitable for outside work, and append it herewith for the information of all those interested—and probably all the readers of the FLORIST are interested more or less. If they are not interested now, they will be in the near future. Mr. Walker, who called out the names of the good ones, gave the descriptions in very good rhyme; but I flatter myself I can give artistic verisimilitude to the variations of color on a croton leaf in plain prose, and I will therefore not encourage the playful John in his capers. Rhyme in this connection would be unsuited to the dignity of the subject and, besides, I don't wish to be the instrument of causing more jealousy and ill-feeling between John and Deacon Harris. The deacon has *aspirations* in the poetical line and I don't want him to be discouraged.

LIST OF GOOD VARIETIES FOR OUTSIDE.

Acubæfolium; dark green, blotched with yellow; veins and mid-rib green, slightly tinged with pink.

Chrysophyllum; yellow, small.

Disraeli; green, veined with yellow; mid-ribs yellow; long; halbert shaped.

Elegans; dark green; mid-rib crimson; long; narrow.

Evansianum; light green, veined and spotted with yellow; mid-rib yellow. This variety changes color when old.

Hanburyanum; light green, marked with yellow and crimson. A very beautiful variety.

Interruptum; dark green with crimson mid-rib; wavy margins. Very fine.

Irregulare; dark green spotted with yellow; mid-rib yellow; margins wavy.

Johannis; bright green; margins and mid-rib yellow.

Maculatum Katonii; bright green spotted with yellow.

Maximum; shining green spotted with yellow; mid-rib and margins yellow.

Multicolor; light green with yellow markings; changes color in old specimens.

Nevilliæ; light green heavily barred and marked with yellow. Old specimens change color.

Queen Victoria; golden yellow mottled with green; mid-rib and veins red; margins red. Very good.

Recurvifolium; deep green; mid-rib and veins crimson; bordered with yellow. A grand variety. Very distinct and beautifully variegated. As the name indicates, the leaves are recurved.

Undulatum; purple with crimson blotches; wavy margins.

Volutum; green, veined with yellow; recurved.

Williamsi; green, veined with yellow; mid-rib crimson. Very beautiful.

Weismanni; dark green spotted with yellow; mid-rib and margins yellow.

Youngii; dark green blotched and spotted with yellow and red.

There were fifteen or twenty more fine varieties but I had time only for a passing glance at them.

The houses in which these crotons are growing are kept very moist and the thermometer stood at over 72° while I was there (4 p. m.). The glass was shaded with scrim cloth. The compost used is a fibry loam with a sprinkling of sand to keep it porous. With proper attention to potting, watering, heating, etc., there is said to be no great difficulty in growing crotons successfully, and considering how beautiful they are and how useful for decorative purposes *all the year round* there can be little doubt but their culture will be largely increased in the near future.

G. C. WATSON.

Phila. May 27, '92.

The Mme. Pierre Guillot.

In response to a request for a description of their method of growing the Mme. Pierre Guillot, with which they are very successful, Messrs. C. Strauss & Co., of Washington, write as follows:

"There is no secret as to the cultivation of this rose. It receives with us no better and no worse treatment than Perles, Brides, Mermets, Woottons, Gontiers or La France. The houses devoted to it, about 1,000 running feet, face southeast, are sunny, well ventilated and well heated.

"Our foreman prefers not to enter into a discussion of the value of the Madame Pierre Guillot as a forcing rose. To him the successful cultivation of 12,000 bushes of this variety with much profit therefrom is sufficiently self-convincing argument. To him the fact that it can be shipped from Washington to Milwaukee or St. Augustine and reach its destination in improved condition; that it is more largely sought for by his customers than any other rose of recent introduction and that it blooms so freely as to admit of sale at moderate figures which the masses will pay, are sufficient points to warrant his faith in it. It is no American Beauty with a dollar bill requirement, but a modest, charming rose which has been profitably grown and sold at the price of the Perle and is its fit companion.

"While we do not wish to say who could grow this rose, we will say this, that any commercial or other grower of roses for cut flowers in winter who *cannot* grow the Perle des Jardins *cannot* grow Madame Pierre Guillot.

"We are not in any way attempting to place this rose on the market for past experience has convinced us how perilous is such an effort to one's good standing. We find that our venture with the Wootton has already put us in that long list of the condemned, and we are, therefore, very shy of offering ourselves again to run the gauntlet of interested and disinterested criticism."

Washington.

On Decoration Day thousands of people lined Pennsylvania Ave. to see the veterans and their escort of District National Guards parade, thus beginning the day's ceremonies. Arlington Heights, Soldier's Home and Congressional Cemeteries were the main points of interest. All the streets in the city were draped in flags and decorated with garlands of green, and wreaths and shields of flowers, some having other designs, all presenting a patriotic and beautiful appearance. This work was all completed Saturday evening.

Arlington never looked more beautiful. Granolithic walks have been laid around the Mansion, and walks extended, increasing the facilities for carriage stand and adding much to the beauty of the place as well as to the comfort of the thousands of visitors.

Mr. Rhodes, the gardener, has all his planting-out finished, and it looks very fine, though he tells me some of it had to be replanted, such as coleus and echeverias, they having suffered from a severe hail storm. Approaching the old garden south of the Mansion he has 4 beds about 30 ft long and 4 ft wide made of Alternanthera brilliantissima. Very handsomely done in echeverias are the names of A. Lincoln, Garfield, Grant and Sheridan, I noticed a round bed about 5 feet in diameter made of Euonymus Japonica radicans pinned close to the ground entirely covering it, with a rug of Pilea arborea, about six inches from the edge; through the euonymus was dotted Celosia cristata from 2-inch pots, in flower, making a unique and very attractive bed. Two rock mounds, about 20 feet in diameter and 8 feet high were covered with green moss, and in the pockets were placed good sized Pandanus Veitchii and utilis, Sago palms, Areca lutesens, Ficus elastica, draceenas, crotons, yuccas, dasylirions, ferns of various kinds and agaves, arranged in such a manner as to present a striking effect, being just in the edge of the woods in a half shady spot. Tubs containing large specimens of palms, pandanus and yuccas were placed along either side of the drives, a pleasing feature. Everything was in the most perfect order, doing great credit to both the superintendent and Mr. Rhodes.

Sheridan's tomb was a perfect mass of roses worked in handsome and appropriate designs. The massive granite shaft was surrounded with choice floral designs, surmounted with a large wreath of Jacq roses, the gift of President Harrison. On the grave, covered as it was with roses, was a corps badge from Sheridan Post, No. 14, G. A. R., of immortelles. On the right was a large flag of the Loyal Legion worked in red, white and blue immortelles, while quite a handsome cavalry saddle of roses and immortelles completed the set pieces.

Admiral Porter's grave was artistically decorated. A large cross and crown of white carnations and roses occupied a position at the head, while an anchor made of white immortelles rested amid a bed of roses at the foot. The special feature of the decorations was a large

JAPANESE GARDENING. PLATE III.

battle ship of cape flowers and immortelles, full rigged and upon its side the words, "Potomac Association of Naval Veterans. A Tribute to our Shipmate." This was made by Gude Bros. A very creditable piece of work.

The Potomac Relief Corps always pays particular attention to the Tomb of the unknown, which contain 2,111 unknown dead. When they had it decorated it looked like a bit of fairy land. The top of the tomb was covered with a large flag. From each corner hung a handsome wreath, while from the center a flag was suspended, made of white and red carnations and blue immortelles, a gift of the President. Around the base was stretched a piece of cotton 2½ feet wide which was completely covered with dark red roses. Worked in daisies were the words "Our dead" on either side of the tomb. A number of wreaths, shields and bunches of flowers covered the ground around about the tomb. This tomb attracted more attention than any other in this cemetery. At the head of each grave was placed a small flag 6 x 10 and a bunch of flowers, which constituted the decorations of the thousands whose remains rest at Arlington.

Gen. John A. Logan was known to the boys in blue as the Black Eagle, and among the many pieces decorating the General's Tomb at Soldiers Home was an eagle made of white and black immortelles. It was made by Strauss & Co. and was a very life-like representation.

Among the many pretty designs made for decoration was a large circle with the American flag and crossed guns made of carnations and immortelles, and a large shield with stacked guns, worked out with carnations and La France roses. Both were very handsomely done and were a credit to the maker, Mr. C. F. Hale.

Flowers were plentiful at the market and brought very fair prices; pæonies from $1 to $1.50 per dozen. This season being at least two weeks late with us, just caught the roses at their best. Outdoor flowers are plentiful, and inside roses abundant but of poor quality, owing to the cool and wet weather. The demand for flowers of all kinds was good, prices fair. All the florists report good trade.

We had the pleasure of a short visit from Mr. Stewart of Boston last Sunday.

C. LESLIE REYNOLDS.

Baltimore.

The thermometer and trade are day by day developing an inverse proportion that makes it almost a hopeless task for the cut-flower man to keep cool, for as the mercury slowly gains point after point, the sales of flowers drop just as surely but a little more rapidly.

Funeral work is about the only sure card, and that seems a little off, too, though still strong enough to use up all the white and yellow buds that are offered. Add to the slow demand the fact that outdoor roses are in full glory, and the markets full of them, and a reason for the glut in the Exchange the latter part of the week will not be hard to find. Smilax is still scarce, and what is offered far from first-class.

A trip around town indicated that the time of displaying choice flowers in show windows is not now, for a heavy percentage of the florists displayed glasses of pink, white and red pæonies. It is so hot though that good flowers would be thrown away if shown in quantity. R. J. Halliday has been displaying some very fine carnations in spite of the heat, and they stand it better than anything else in the cut-flower line.

Feast decorated the summer garden of the Crescent Club, a leading political organization, early in the week, and though the weather was so badly against it the decoration looked fine the next day. Palm leaves entered largely into it, and were very pretty, arranged in clusters or spread out in fans. The whole place was turned into a tropical woodland, with fountains, bowers, and cozy corners where growing plants combined with the palm leaves and wreathing in a very artistic manner. The wreathing, by the way, was not wreathing at all, but a species of smilax that grows wild hereabouts and makes a really effective substitute for "Myrsiphyllum asparagoides" where much space is to be covered and the decoration is to last several days.

Choice La France are plenty at 4 cents, Perles at 3 cents, Smilax 20 cents.

MACK.

New York.

The last week in May closed a very dead month for the flower trade, and though Decoration Day brought trade largely to those florists whose chief patrons are people of small means, it did nothing for the fashionable florist. There was a large volume of trade on the east side, plants being extensively called for. A Le Moult states that he found his trade larger, in most particulars, than last year. He sent out a great many memorial designs, among them being a huge plaque, bearing the American flag; this was for the decoration of Grant's tomb, being presented by the *Mail and Express*. A good many memorial designs were made in Cape flowers, and there was the usual demand for metallic wreaths. Some very large wreaths of Cape flowers and immortelles bore an inner wreath of silvery leaves (Leucodendron). Another busy Decoration-Day florist was Jno. J. Foley, who was formerly with Le Moult. Mr. Foley makes funeral work his specialty, and is the originator of many new designs. To him was entrusted the decoration of the Worth monument. In the part of the town where Mr. Foley and Mr. Le Moult are situated they find it most desirable to confine themselves to flowers rather than plants; it is a district in which the funeral trade is very large. Dried flowers are largely used.

The up-town florists are very quiet now; perhaps it is just as well that there is so little stirring, for the excessive heat with which June opened has nearly ruined the flowers. It was hardly worth while for the commission dealers to open the boxes, for the poor roses looked as if they had been baked. As Mr. Burns said, even the Greeks didn't want to handle them, and though other stuff was hardly as bad as roses, still it was in an extremely demoralized condition. As for prices—well, they were unquotable; there was no reaching bottom, apparently. The one thing worth quoting was lily of the valley; outdoor flowers were over and inside stock scarce; it brought from $4 to $6. A large quantity of wild flowers were in, and apparently selling well; ox-eye daisies, buttercups, and False Solomon's seal (Smilacina). Any quantity of pæonies were to be seen, and also mock orange and deutzia, but the commission dealers hardly care to handle such flowers.

Corn flowers and sweet peas were plentiful; a lot of this summer stuff is grown by small florists who go in very little for winter flowers; they find their chief harvest now, usually peddling their goods themselves.

J. H. Taylor is able to keep his roses in condition these hot days through the ingenious arrangement of his flower vault; it joins his ice-house, thus making a regular cold storage room. It is kept at a very desirable temperature, while giving every facility for the storage of flowers.

A funeral design made recently by Thorley for the Dramatic Association, was a large quill pen, mounted on a base of ivy leaves draped with Bride roses. The quill itself was composed of pink carnations, the feather of wild smilacina with a mid-rib of Cusin roses.

Most of the recent weddings have been very quiet ones, but the prevailing decorations have been pink, hydrangeas being used more than anything else. At this season we generally hear of a "daisy wedding," where these field flowers are exclusively used.

Odontoglossum citrosmum, growing in baskets, has proved an attractive decoration, lately, in the flower stores, having a carpet of lycopodium beneath and a background of Araucaria excelsa.

The auctions still keep up their interest, both plants and prices being good. Jno. S. Bush, of Tremont, sends in fine fancy-leaved caladiums to Elliott's, and also good acalypha, which makes a feature in a sub-tropical bed.

Langan Bros., of Astoria, are sending scarlet poppies to the auction; they are very showy for bedding in a sunny place.

Chas. Zeller, of Flatbush, sends in good marantas to Young's sales, as well as a variety of flowering plants. The amateurs still haunt the auctions, and help to run up the bids.

J. and R. Leach, of Bergen, have borne away the palm for Gloire de France geraniums this season, and they have sold extremely well.

The "star" of the orchid sale, on June 7, is Cypripedium Chamberlainianum, a new variety, described as of remarkable beauty. This sale offers other features of special interest.

The growers who have been accustomed to do business at the 34th street Ferry will soon have a place of business of their own. A company has been formed on a good basis, no one but a wholesale grower being allowed to subscribe and not over five shares of stock to be held by one individual. A large and convenient store has been hired, in the neighborhood of the 34th street Ferry, and it is understood that the retail dealers have offered to fit it up with necessary tables, etc. The old place at the Ferry will be abandoned.

G. Messeberg of Flatbush is growing some very fine lantanas this year; an old and useful plant for the bedding trade, which has seemed out of favor for some years. It is constantly in bloom all summer long, and has a formal sort of prettiness generally admired.

David Clark & Sons, whose store and greenhouses command a fine situation at 79th St. & Western Boulevard, report a very brisk bedding trade this season. They do a large business in window-boxes, vases and baskets, which uses up a large quantity of miscellaneous stuff. They use a great many ferns in table centres and other decorations; an adiantum which was mentioned as particularly satisfactory was A. Ballii. The growth is handsome and the foliage very firm and hard, so that it bears handling well. Some good aucubas were noted here; the varigated form is as handsome as a croton, and bears rough treatment well; admirable for city bedding. A number of these plants form a regular hedge under the windows of Delmonico's Cafe, with fine effect. Noticing some well berried plants of Ardisia crenulata Mr. Clark stated that they use a large quantity of these plants and find them very useful.

John Muller has his present store finely placed at 79th St., right opposite the Museum of Natural History. He does a good bedding trade, being in a district where it is much called for.

Philadelphia.

The weather has been very warm the past week and made it very bad for business. There were a few weddings, as is usual with the advent of June, but aside from these and funeral work there was very little doing. Flowers have been plenty and in most cases hard to sell. One of the growers, after a fruitless tramp around the stores, was seen to bring up in front of a pawnbroker's establishment, but after meditating quite a while he turned sadly away, saying, "I guess I couldn't get anything on them, I'll have to try the fakirs."

Anderson reports having done very well with his large house of Jacqs. They were very fine and sold well at $10 a hundred. Small teas are now 2 to 3, Mermets, Brides, La France, etc., 3 to 5, carnations 1 to 1¼, valley 5.

Mr. Foulds, Gywned, will erect a carnation house 125 feet long, and plant with Wilder, Hinze's White and Lizzie McGowan.

Quite a number of growers are planting houses of chrysanthemums for cutting next fall, and from the present outlook there will be no scarcity of this popular flower.

A box containing fifty plants of chrysanthemums, said to be very fine varieties, was brought from Japan by a resident of Philadelphia, and given to a florist here to grow on. But six plants were found to have any sign of life, and of these only one survived. This is a strong plant and may prove to be a valuable variety.

The trip to Washington is spoken about very frequently, and we predict a larger delegation from Philadelphia than has attended any previous convention.

John Westcott, not being satisfied with breaking the record for three games on the club alleys last week, and for fear some one else might approach it, has moved it several pins higher, making in a match game last Wednesday evening 595, nearly 200 pins to a game. He is after 600 and no doubt will soon get there.

Mr. Robert Craig was much pleased with what he saw at the World's Fair grounds while in Chicago. The progress made on the buildings of the Exposition is wonderful. The Horticultural Building has gone up like magic; last October when he was there, the piles were being driven for the dome, now the entire structure is finished, and contains seven carloads of plants from California. The Horticultural and the Art buildings, he thinks, are the two architectural gems of the show. The Fisheries Building is a unique structure, the columns around it being appropriately decorated with figures of various kinds of fish, frogs, turtles, serpents, and the like, which are placed on the columns in such a way that they seem to be chasing one another about as if in their native element. Mr. Thorpe, we are told, likes to linger about this building watching the life-like varmints. This is all right, however, as they are not visionary and can be seen by any one.

The rose garden is admirably arranged in irregular but symmetrical beds, designed to accommodate large and small exhibits. The trade will be well represented in this beautiful spot. Robert Craig will have a bed of Brunners, bordered with Clotilde Soupert. Large rose growers from all over this country and Europe have made application for space, which has nearly if not all been taken. There is a six foot trellis which entirely surrounds the garden, hiding it from view; this will be covered with vines planted by the Dingee & Conard Co. of West Grove, Pa. There will be four entrances; this garden will, it is thought, be one of the most attractive places on the grounds.

On the Wooded Island will be tested plants from all parts of the globe, many of which have never been tried in this country before.

Many of the foreign outside exhibits are already planted and doing well, the frequent rains having been very favorable to them. European florists and nurserymen have entered into this competition

JAPANESE GARDENING. PLATE IV.

with great spirit and their part of the exhibition will no doubt be very creditable to them.

There will be considerable space devoted to aquatics, the tanks and ponds being heated with steam.

The plants already received from California consist of palms, Dracæna indivisa and agaves, large plants, intended mostly for outside decoration in Mr. Ulrich's department.

The transplanting of large trees under the direction of Hugh M. Hughes of Philadelphia has been a great success as all are doing well. These were quite large trees gathered from all parts of the grounds and planted in avenues. Outside work has been greatly hindered by the wet weather, but is progressing very favorably. Mr. Craig says the Horticultural department of the Exhibition will, beyond doubt, be a grand success.

Boston.

The wedding season is at its height. They commenced on the morning of June 1st and have kept up a steady stream ever since. Weddings without flowers would never do, hence the florists have about all they can attend to. There have been no notably large decorations and no occasions worthy of special description, but there has been a big consumption of flowers for the past week and there is more ahead. Roses are in wretched condition owing to the extremely hot weather. Mermets come in like rags, without color or shape, and Gontiers and Jacqs burst wide open before they reach the city. If the hot spell continues it will not be long before the season will have caught up once more to the average.

All the dealers report increased trade for Memorial Day, some of them claiming a very large advance over former occasions. The absence of out door astilbe, snow balls, rhododendrons and azaleas was severely felt. It did not make much impression on the rose market but it sent the carnations a-booming, an abundance of first class white stocks acting as a sort of check, however, on the upward flight of the white carnations. Carnations of all kinds have been and still continue to be of extra fine quality.

For Memorial Day there is a growing tendency to use wreaths of laurel, box or English ivy leaves instead of cheap bouquets to decorate graves and tombstones. A crescent wreath of box with a bunch of roses at the base makes a beautiful design. It can be put together quickly and cheaply, will keep well, is appropriate and ought to be a favorite piece for such a purpose with florists and customers. The tawdry dried flower abominations are nowhere in comparison.

On June 1, M. Aylward, who has been foreman at the greenhouses of Thos. H. Meade on Columbia St., Dorchester, for some years, leased that property and will run the business on his own account. Mr. Meade has taken the Minton greenhouses at Harrison square and is contemplating considerable additions to the glass. He has contracted with Thos. W. Weathered's Sons of N. Y. for two of their latest improved iron rose houses, 110x18.6.

There was quite an extensive display of cut flowers at Horticultural Hall on Saturday, June 5. From F. B. Hayes there was a large collection of rhododendrons and hardy flowering shrubs in variety, filling about fifty running feet of table. J. W. Manning showed about eighty species of hardy herbaceous flowers. As always in his displays everything was correctly labelled with the botanical and common name and natural habitat. T. C. Thurlow had some fine named hardy azaleas, and Rea Bros. an excellent collection of garden perennials. Wm. Nicholson showed a new seedling carnation closely resembling Grace Wilder, which was raised by Sewall Fisher.

Chicago.

There are plenty of flowers, such as they are. Roses are extremely poor. Carnations are of fair quality, holding up in grade better than any other flower. All outdoor flowers are poor. It has been the poorest spring for out-door flowers we have had in years. The weather is still chilly but there is now an occasional burst of sunshine, and several days during the past week could, with some slight reservations, be called pleasant.

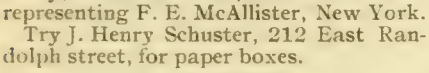
The city florists did a fair business for Decoration Day, mainly on account of the scarcity of outdoor flowers, as usually this occasion makes but few extra sales for them. But the demand from outside

was large and the wholesalers did a heavy shipping business.

The carnation grows more and more important as a factor in the cut-flower trade. The demand has been heavy all the past season, and several growers have said that it has been so much more profitable than the rose that they will next season devote a larger proportionate amount of space to it.

Mr. H. G. Higley, formerly in the business at Cedar Rapids, Ia., was in the city this week. He is now enjoying an official term as engineer and surveyor to the government of the Mosquito Reservation in Nicaragua, Central America. He is having government maps printed here, and arranging for an exhibit at the World's Fair. He says that the vegetation in the Mosquito Reservation is wonderfully luxuriant, and that orchids—mainly oncidiums—are a prominent feature.

The new greenhouses at Douglas Park are nearing completion. They will be quite an addition to the attractions of this park.



Among recent visitors to the city were Wm. F. Dreer, Philadelphia; J. D. Carmody, Evansville, Ind., and W. S. Allen, representing F. E. McAllister, New York.

Try J. Henry Schuster, 212 East Randolph street, for paper boxes.

Chester County Carnation Society.

The regular meeting of the society was held June 4, with only moderate attendance on account of a number of the members being crowded with work.

Mr. Shelmire showed an enemy to the carnation plants in the field; a small "measuring worm" that attacks the newly set plants at or slightly above the ground, boring into the center of the stalk, the plant withering and dying above the point of attack. The roots were not killed and would presumably renew their growth. The "worms" as shown were from 3-16 to ½ inch long and for about ⅓ its length, in the middle, brown, each end being white. None of

MUCH ENLARGED.

the other members were aware of the presence of this enemy. I send a drawing of the pest herewith.

Considerable discussion was had upon the purchase of material, coal, etc., and a committee was appointed to obtain prices on such equipment as might be needed by the members.

The subject for the July meeting is "The Past Winter's Work." C. J. P.

World's Fair Notes.

The horticultural department is now fairly at work in its various branches. The auxilliary houses are completed and in running order. These houses, eight in number, are substantial and well appointed structures. The heating (steam) is a combination of the overhead and underneath systems, and so far as can be judged at present this system promises to be a complete success.

Shipments of plants are coming in quite rapidly. The first to arrive was a carload of miscellaneous stuff from Florida, consisting principally of palms, and a large lot of Yucca Gloriosa; the latter will be used next summer for outdoor effects. A carload of large plants also arrived from the place of Mr. W. J. Gordon of Cleveland. In this lot was an immense specimen of the Crape Myrtle which was brought over from England by Chief Thorpe on his coming to this country some twenty years ago. A much larger shipment from Mr. Gordon is expected to arrive this week.

The seed trial, an outline of which was published in a former issue of this paper, promises to be a very interesting one. In the class of plants grown under glass the following are represented: Cyclamens, primulas, gloxinias, tuberous begonias, cinerarias and calceolarias. All the principal seed growers of Europe and this country have sent in their choicest strains of seeds of the various kinds. Every variety that has been sown so far has come uniformly well, and the seedlings are looking strong and healthy. The cyclamens pricked off into flats are as fine a lot of young plants as one could wish to see. The first sowing of Primula sinensis, some 15,000, are also looking very fine. Another sowing of these will be made at a later date.

The trial in pansies this year is of course but a preliminary one. The plants grown this year are intended for fall flowering. Thousands of plants from seeds and cuttings are being grown, mainly of such kinds as promise to make the best showing this coming October, the time for the dedicatory ceremonies of the Fair.

A large force of men have been busy as bees setting out shrubbery, herbaceous and nursery stock. The cold and backward spring and the tremendous downpour of rain have been very beneficial to the newly planted stuff. Besides it extended the season for this kind of work fully three weeks.

The rose garden in the center of the island is all planted, and all the stock looks very thrifty. In the collections which were sent from Europe are many varieties that have never been wintered out of doors successfully by local growers. Chief Thorpe proposes to give all these sorts a trial. The greatest care will be taken and the most approved modes of covering and protection against the effects of our treacherous winter and spring weather will be employed to insure success. The experiment will undoubtedly be a valuable one to all growers of roses, in this latitude particularly.

Mr. Ulrich, at the head of the landscape department, is making things hum around the park. All around the Horticultural and Woman's buildings the sodding is being done as fast as the ground is ready. The edges of the island sloping down to the waters of the lagoon are completed, and everything planted seems to thrive splendidly. Large clumps of lilacs planted last fall and early this spring are in full bloom. This department is also completing a set of greenhouses, eleven in number, which will be used for growing bedding stuff of every kind to be used for the ornamentation of the grounds outside of the precincts of the Horticultural Department proper.

Arizona has applied for 2,000 feet of space in Horticultural Hall and 5,000 feet of space outside, and proposes to make a magnificent display of her horticultural resources, mainly fruit. The exhibition will include a display of cacti and some of the specimens will be of gigantic size.

A decision of the Secretary of the Treasury that exhibits consumed or destroyed during the Fair shall be exempt from duty is of decided benefit to foreign exhibitors in the Horticultural Department, as so many of such exhibits will not be worth returning. If sold here the duty must be paid, but if destroyed or damaged so as not to be salable or worth returning they will be exempt.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

The Atlanta Convention.

On to Atlanta was the word, and from all points of our country, near and far, to the "Gate City of the South" came the nurserymen, accompanied, many of them, by their wives, and friends in the horticultural line, assembling at the hospitable Kimball House on the evening of May 31, and the early morning of June 1. One had but to note the happy greetings and joyous reunions of those who were bound by the same fraternal ties and that close kinship of mutual interests, the "touch of nature that makes the whole world kin," to feel that the social features and advantages of such national gatherings are alone worth manyfold the journey, care, time and money bestowed upon them.

It will be impossible in one article to tell of all the good things said and done at the convention proper, and in excursions to all the many interesting horticultural points in the state, and which are not yet over, for even as we write upwards of 200 visitors are still "marching through Georgia," escorted by native sons proud to point out the progress and advantages of what is to-day the most enterprising and advanced of all the states of the Sunny South.

The first day's session, with about 250 members and visitors present, commenced promptly on time at 10 o'clock, June 1, in the Hall of the House of Representatives of the capitol, a building fully up in size, architecture and finishing with those of most of the other states of the union.

In the absence of President Van Lindley, of Pomona, N. C., who is traveling in Europe, Hon. N. H. Albaugh, of Tadmor, O., presided, and introduced Gov. G. W. Northen, known as the farmer governor, who in true southern style welcomed the visitors to the state, to its capitol and to the homes of his people, trusting that many would some day come to remain among them, as some of those present had already done. The mayor of Atlanta followed with facts and figures to prove the great progress of Atlanta, "the Chicago of the South." Hon. R. T. Nesbitt, Commissioner of Agriculture, and Prof. J. B. Hunnicutt, of the University of Georgia, also warmly welcomed the visitors and commended their mission. To these words of greeting President Albaugh responded in fitting terms, and, continuing, delivered the annual address to the Association, reviewing its work and its prospects for the future. Secretary C. A. Green, of Rochester, N. Y., presented his report as secretary, which, with the treasurer's report, gave proof of good condition and financial standing. The regular committees were then appointed, and for two days the work moved smoothly and rapidly along.

Among the good topics upon which papers were read and speeches made were the following: "Duty of American Nurserymen at the World's Fair," by Hon. N. H. Albaugh; "Fruit Tree Packages," G. J. Carpenter, Fairbury, Neb.; "Grading and Assorting Nursery Stock," W. F. Heikes, Huntsville, Ala.; "Interstate Shipment of Nursery Stock, with reference to the California Monopoly," Col. U. B. Pearsall, Fort Scott, Kan; "One Way of Preparing a Nursery Catalogue," J. Horace McFarland, Harrisburg, Pa.; "Who Makes the Most Money, Nursery-

men or Fruit Growers?" J. H. Hale, South Glastonbury, Conn.; "Suggestions to Nurserymen," Prof. P. J. Berckmans, Augusta, Ga.; "How to Eat Other People's Watermelons," W. L. Glessner, Americus, Ga.

The following report was unanimously adopted:

We, your committee, appointed upon the subject of the California quarantine laws, hereby respectfully recommend the passage of the following resolutions:

Resolved, That the secretary of this Association notify the president and secretary of the California State Board and other proper officers, that the people east of the Rocky mountains consider the present inspection laws of California a measure uncalled for and a great discrimination, and demand their prompt repeal.

Resolved, That in the event of a refusal to repeal such obnoxious laws, we pledge ourselves to make a united effort to have our several states pass strict inspection laws relative to the importation of green California fruits.

Resolved, That in the event of having to pass such laws, the executive committee be requested to employ a good attorney to draft a uniform law to be passed by the respective states east of the Rocky mountains, and one which shall be so framed by a schedule of fees as to be no expense upon the states. Respectfully,

U. B. PEARSALL, Chairman.
G. J. CARPENTER.

The following officers were elected for the ensuing year:

President—H. Augustine, Normal, Ill.

Vice-President—Z. K. Jewett, Sparta, Wis.

Secretary—C. A. Green, Rochester, N. Y.

Treasurer—N. A. Whitney, Franklin Grove, Ill.

The executive committee is composed of W. F. Heikes, Huntsville, Ala.; W. J. Peters, Troy, O., and B. S. Lake, Shenandoah, O.

Chicago was selected as the next place of meeting.

Mr. McFarland was appointed a committe of one to prepare a memorial asking that catalogues and circulars be sent through the mails as newspapers now are. That is—to be weighed in bulk and postage paid in cash, instead of affixing stamps.

Invitations were received to visit points of interest in all parts of the state. As a large number wished to see the already famous Fort Valley peach region, that was chosen as the first on the route program, so at 3:45 p.m., on June 2, 101 excursionists rolled southward on the Atlantic and Florida railroad, ticketed to Fort Valley, just 103 miles away.

But the story of what was seen here must wait till next week.

MORTIMER WHITEHEAD.

Trees and Shrubs in Bloom, June 3.

LILACS.—The varieties of common and Persian lilacs, also the early blooming species, are much past their best. Syringa Josikæa and S. villosa are the lilacs now in perfection; the first named has deep violet-purple flowers and long, slender panicles, and the last named shorter and more densely furnished clusters of rosy lilac blossoms. Josikæa is a species from Transylvania, and villosa a species from Northern China.

ROSES.—Rosa rugosa alba is one of the handsomest shrubs now in blossom; the red-flowered is also in bloom. Both should be grown as shrubs and not as we usually treat roses. Rosa alpina and its varieties, also Nutkana, Kamschatica, and a few other "wild" roses are in bloom; they are good enough for variety's sake, but not for select garden culture. Madame Georges Bruant, however, the hybrid between rugosa and a tea, and now in flower, either as a shrub or a garden rose is a gem in any collection. H. Ps. are almost ready to burst open.

THE SMOKE TREE (Rhus Cotinus, or to be more correct let us say Cotinus Cotinus,) is beginning to flower. But this is nothing, as the blossoms have no ornamental merit; it is in the light, feathery "smoke" that comes later we get the horticultural value of the plant.

RHUS COTINOIDES, or, I should say, Cotinus Americanus, however, is also in bloom with us. This is the first time this rare American has flowered here, and I have never heard of its blooming elsewhere in cultivation. Have you? Its flowers much resemble those of the Venetian sumach, but, if anything, the panicles are more slender. In habit the Venetian sumach is more of a bush than a tree, whereas the American species is more of a tree than a bush.

JAPANESE MAGNOLIAS.—With the exception of a few scattered flowers of the hybrid magnolias, as Soulangeana, Lenne, speciosa, and the like, those that come into bloom before the leaves appear are all past, and now is the heyday of that set of Japanese species, to-wit: hypoleuca, Watsoni and parviflora, which for beauty, refinement and fragrance are the charm of our gardens to-day. Their flowers appear at the same time, or a few days after, the foliage.

MAGNOLIA HYPOLEUCA is a timber tree indigenous to the mountains of Jesso. It belongs to the large-leaved group like our tripetala and macrophylla, and has fine, large, creamy-white, powerfully fragrant blossoms closely set into a mat of large foliage. Our specimen to-day has about 20 open flowers on it.

MAGNOLIA WATSONI.—A magnificent species from Gio Kuse. It grows to be a small tree, but begins blooming when only a foot or two high. Its flowers are creamy white, almost globular before they open, and saucer shaped and 5 to 6 inches across when expanded. A broad band of blood-red filaments surrounding the base of the pistil adds conspicuously to the beauty of the open blossom. This plant has been grown in American gardens for some 20 years, and at Dosoris for over a dozen, and it has grown and flourished with us and blooms abundantly here every year. We called it parviflora because we knew no better. In the Japanese gardens at the Paris Exhibition in 1889 the English people discovered it, bought it and brought it over to their botanical garden at Kew, where it flowered for the first time the next year (1890), and was found to be a new species. Then, in the *Botanical Magazine* for February following (1891), Sir Joseph Hooker named it Magnolia Watsoni, after one of the gardeners at Kew. Oh, what a smart lot we American horticulturists are! Can it be that our botanists, as well as gardeners, are like Bailey's parrot?

MAGNOLIA PARVIFLORA.—What a lovely little gem this is to be sure. The plant makes a small, spreading shrub. The flowers are 3 inches across, nodding and snow white, with a broad band of bright carmine filaments around the pistil cone. But they are only moderately fragrant. It comes from the Oyama Mountains, takes kindly to cultivation, and blooms abundantly with us every year. Provisionally it was called parviflora minor, to distinguish it from what is now called Watsoni, but I always insisted that they were specifically distinct.

AMONG AMERICAN MAGNOLIAS the large-leaved tripetala, whose white flowers smell like new-baked bread, is in full bloom, the magnificent macrophylla opening, the fragrant Fraseri on the wane, the yellow-ish cordata past its best, and the green acuminata in fair condition still but not worth noticing. Glauca and Thompsoni come in later, so does grandiflora, which is barely hardy here. The tulip tree has not opened its flowers yet.

VIBURNUMS.—Reticulatum is past, it was very fine. V. Lentago, a native small tree with large pear-tree-like leaves and cymes of white flowers, is now in its prime. V. pubescens, a small, upright inclined, bushy shrub, and also a native, has small cymes of pretty, white flowers; it is a plant we should see oftener. The common cranberry bush, V. Opulus, is a large shrub we should plant more of, for not only are its ample white cymes now very attractive, but from late summer on these flowers are succeeded by a crop of glossy crimson fruit that are more ornamental than the blossoms. And the plant is very hardy. Of the Chinese V. macrocephalum we have two forms, one with broad, flat cymes of flowers, of which a few scattered around the outer edge only are sterile, and the inner ones perfect, this variety is called Keteleeri; that known as macrocephalum proper has snowball heads of sterile flowers.

PRUNUS SEROTINA, our wild bird cherry, is in splendid bloom everywhere in wood and lane, as well as cultivation. Padus, Virginiana, demissa, and others, are about past.

CORNUS ALTERNIFOLIUS along the roadsides and margins of woods are conspicuously pretty little trees just now because of their wealth of umbels of white flowers spread over their flattened branches.

THE YELLOW LOCUST is also in bloom. Nothwithstanding their size and profusion, their clusters of fragrant white flowers have no great mark among the trees. The trees themselves are tall and naked or scraggily branched, and were it not for the grateful atmosphere and falling petals to remind us of the floral clusters overhead, our eyes would seldom be attracted thither.

THE ROSE ACACIA, on the other hand, is a beautiful shrub. Its limbs are slender and scrawly, but so full of large, rosy pea flowers as to often be weighted near to the ground by them. A variety we have called grandiflora is considerably better than the type.

LABURNUMS were splendid but now on the wane. Waterer's is the longest racemed of the yellow ones, and, I imagine, the best. The purple-flowered one, although it does not appeal to our fancy of "Laburnum's drooping gold," is nevertheless a very desirable kind. The one known as autumnalis blooms full at this time, and, so it is said (but ours forgets itself sometimes), more or less in fall.

MEDLARS are fruit trees, but we grow them for their fine foliage and large, white flowers, now so pretty. They bear fruit, too, but such fruit. No, no, the small boy will pass it by indignantly.

SYMPLOCOS PANICULATUS, or cratægifolius, is a little known but much deserving shrub from Japan. About the end of May its branchlets are a fluffy mass of little panicles of small, white flowers. Its greatest beauty, however, is said to be in the copious crop of ultramarine blue berries that it bears later on. Now, while our plants are thrifty and bloom profusely every year, they forget all about the berry business! Still, we don't despair.

TAMARIX AFRICANUS is about past, and we have begun cutting it back. Now, we have another species (am sure it is) in good growth and leafage and bursting

into bloom. What it is I do not yet know. Now, please don't suggest any of the dozen names on the tip of your tongue, it is the confusion among them that has already befuddled me so.

DEUTZIA GRACILIS is in perfection. D. parviflora is, too, or, it may be, just a little past its best. This Deutzia parviflora is a beautiful, quite hardy species from Northern China, and not yet common in gardens. In habit of growth, and the way in which its corymbs of open, pretty, white flowers are spread along the stiff, upright stems, the plant is quite suggestive of some spiræas.

LONICERA ALBERTII.—Ten to twelve years ago we called it L. hispida. It is a very dense, ingrowing, slender-stemmed, pendulous shrub that cushions itself upon the ground, and spreads by underground stems most like couch grass. Its leaves are small, narrow, glaucous, and very numerous, and just now it is covered with deliciously fragrant, rosy, lilac flowers. Mr. B. M. Watson, Mr. Warren Manning, and others in Massachusetts, tell me it likes a light, sandy or gravelly soil with them, but our plants thrive better in good ground and an open situation, than in poor ground, and they pine to death in the shade. I've tried them in all these situations. It is a native of the mountains of Eastern Turkestan.

STYRAX OBASSIA.—No wonder Mrs. Berger raves about its beauty! A small tree from Japan, quite hardy with us, and now in great beauty. It is of upright habit, and bears large linden-like foliage. Just now from leaf axils of its lateral branches appear long straight racemes containing 13 to 20 pure white fragrant blossoms with the yellow anthered stamens shown conspicuously within them.

CEANOTHUS OVALIS, a western little shrub, about 2 feet high, is now a perfect cushion of terminal umbels of little, white flowers. It is a very pretty plant, and so, too, is the form called multiflora. C. Americana, the species so common in the eastern states, won't be in bloom for several days yet. Gloire de Versailles and several others of the beautiful varieties of the European nurseries have not proven hardy with us.

BROOMS.—We have a large assortment of these in bloom now, but only a few of them are hardy with us. The wild, yellow broom of Europe is the gayest yellow-flowering plant in our grounds to-day. Pity it kills so much in winter. We have whitish-yellow, and double-flowered varieties of it, but they are inferior to the type. The variety Andreanus, however, is one of the handsomest and most striking flowering shrubs one can grow, the maroon of the inner petals contrasts so strongly with the bright yellow of the outer ones. *Sub rosa*, try it as a pot plant. Cytisus albus, and C. purpureus worked standard high on laburnum, are hardy, and have been in bloom since 10 or 12 days. C. nigricans, a very handsome little shrub from Europe and quite hardy with us, is now opening its bright yellow flowers. Working this species on laburnums destroys its beauty, it is always prettiest on its own roots.

SPIRÆAS.—Let me candidly say, I would tell you more about them if I only dared, for several of them come and go that I have to pass in silence, because I don't know what they are. Yes, yes, we have names for all of them, several names sometimes, but the confusion in the nomenclature is deplorable. However, of the following we are sure enough: S. Can-

[CONCLUDED ON PAGE 1012.]

BRIDESMAID,

THE NEW PINK ROSE.
ITS BLOOM ALWAYS IN DEMAND.

C. A. SMITH FLORAL CO.,
South Seventh St. Minneapolis, Minn.

HOW many of you were kicking yourselves that you didn't have more Lilies, Daffodils and similar stock last Easter?

We told you a year ago how it would be, and this year again the indications all point to a still greater demand in 1893. Make sure you have enough this time. **DO IT NOW.** Don't wait until all the best stuff is engaged. Its the fellow who is just a little ahead of his neighbors that makes the money now-a-days.

LOOK OVER OUR PRICE LIST.

A copy of which we sent you recently. Note especially **VON SION** at pages 15 and 16; **FREESIA** at page 6, and Gardiner's XX **BERLIN VALLEY,** selected 3 year pips at page 4.

REMEMBER you have everything to gain and nothing to lose by sending us a memorandum of your wants now.

We import by the fastest steamers direct from the bulb growing districts, thus insuring **EARLY DELIVERY.** Being direct importers as well as growers, you pay no middleman's profit when you deal with us, but can always depend on getting best quality stock at the **LOWEST POSSIBLE PRICES.**

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

Always mention the American Florist when writing to advertisers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a German gardener, 28 years of age, single, well posted in all kinds of warm and cold house culture, palms, cut flowers, decorations of any kind; also a long experience in laying out lawns and gardens. Best of references. Address Z, Young Men's Christian Association, Larrabee St., Chicago, Ill.

SITUATION WANTED—By a first-class florist and gardener; German; 30 years' experience in Europe, and 2 years in this country in growing roses, carnations, bedding, hothouse or exotic plants of all descriptions; also first-class propagator and landscape gardener. Very industrious and honest. Desires a situation as foreman or propagator. Perfectly willing to work on percentage, or private gentleman's place. Address J A K, Lock Box 16, Anacostia, D. C.

WANTED—A man to take charge of a commercial plant of 14 greenhouses, to grow mostly cut roses and small rose plants. Prefer married man. Must have good references—others need not apply. Address LAROCHE & STAHL, 1237 Chestnut St., Philadelphia, Pa.

FOR SALE—One No. 3 Triumph hot water boiler in good condition. Will be sold cheap. Address VICTOR WAYMAN, Madison, Wis.

FOR SALE—Greenhouses and stock. For particulars, address W. S. SAWYER & Co., Lincoln, Neb.

FOR SALE—Only greenhouse establishment in growing western city of 15,000 inhabitants; 3,000 feet of glass; large stock. Address THORP, Florist, Trinidad, Colorado.

FOR SALE OR RENT—Bargain. Three greenhouses 50x20, heated by hot water—may be moved if desired. In a town of 8,000—suburb of Boston. Address Box 2670 Boston, Mass.

FOR SALE—Six greenhouses and stock. Wholesale shipping trade, growing rapidly. Good opportunity for wide awake florist. Reason for selling, poor health. WHOLESALE, care Am. Florist.

FOR RENT—Five brick greenhouses, already stocked; one 20x40, three 20x60 and one 13x30, with 6-room brick dwelling, nicely located in city of 65,000. Address C. G TURNER, 1513 Franklin St, Wilmington, Del.

FOR SALE—Rose growing plant containing 25,000 square feet of glass with property, situated 25 miles from New York City; stock and houses in A1 condition; plants are growing for next season's planting, mostly Am Beauty and Safrano. Will sell on easy terms. Address ROSE GROWER, care American Florist.

DISSOLUTION NOTICE.

Notice is hereby given that the partnership heretofore existing between Julius Niednagel and Wm. Halbrooks, under the firm name of J. D Carmody Co., is dissolved. All outstanding debts in favor of said firm are payable at the office, corner of Water and Chestnut streets. Persons having claims against the firm will present them at once for settlement.

June 1, 1892. JULIUS NIEDNAGEL, WM. HALBROOKS.

toniensis (Reevesiana), single and double are at their best. They got badly winter-killed. The arching sprays of S. trilobata are a snowbank in the front of the shrubberies, and Van Houttei a bolder and finer flowered variety of it is in prime condition. Both are very hardy. S chamædrifolia has hemispherical corymbs of white flowers. S. corymbosa, a much smaller shrub, a native of the Alleghanies, has terminal corymbs and glaucous leaves. Physocarpus Amurensis (used to be called spiræa), a rank growing bush of the ninebark (opulifolia) order is pretty well done blooming, whereas the ninebark hasn't yet come in. But, except for shrubberies in parks and large gardens, I don't think either of these shrubs are worth growing, we have so many other nice things when they are in bloom.

THE COLUTEAS have begun to display their yellow or tawny pea flowers which they will bear in much abundance for a few weeks to come, and more or less for some months. They suffered in winter. And I have often known them to die back considerably in summer.

THE CHINESE FRINGE TREE is very fine still, and the American is rapidly changing from green to white.

RHODODENDRONS are in fine bloom but barely at their best. Where exposed they suffered in winter more than usual. Hot, dry, windy weather preys upon the vitality of the blossoms.

GHENT AZALEAS are in their gayest state. They love moist ground, a surface mulch, and protection from sweeping winds from any direction.

SNOWBALLS are grand. All are now in perfection, with the American beginning to drop a little. Good ground and good feeding tell plainly in larger snowballs, and in Opulus, especially, the size of those on the lusty young wood is very much greater than on the scraggy twigs.

CALYCANTHUS, or Sweet Shrub, is in fine form, kerrias past their best, mountain ash over, flowering ash waning, and snowdrop trees, except diptera which is lovely, almost past. Weigelias are in all their glory, hawthorns getting old, and Tartarian bush-honeysuckles aiming for fruit.

WM. FALCONER.

Glen Cove, Long Island.

WE acknowledge the receipt of several handsome blooms of Cattleya Mossiæ from Mr. H. W. Buckbee, Rockford, Ill. Mr. Buckbee is meeting with considerable success in the growing of orchids for cut flowers and says he finds that the people appreciate them and are willing to pay a good price for handsome flowers.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., June 14—16. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

FOR THE WESTERN SEEDSMEN.—Arrangements have been made with the M. C. R. R. to take their train, "The North Shore Limited," which leaves Chicago at 12:20 Noon Sunday June 12, arriving in Hartford at 5:35 Monday P. M. with but one change at Springfield, Mass. This train reaches Detroit at 7:20 P. M., Suspension Bridge 2 A. M., Buffalo 4 A. M., (eastern time), Rochester 5:50 A. M., Albany 11:50 A. M. Ample room has been arranged for in a special sleeping car for this party. Members are asked to notify J. C. Vaughan as early as possible, that their names may be put on the sleeping car diagram. The fare from Chicago to Hartford is $20.50. From Columbus via C. H. V. & T. leaving there at 10:10 A. M. Sunday, reach Detroit at 6:20 P. M. Fare $20.29. From Dayton, via Detroit, fare $17.75, from Detroit, fare $15.79, from Cincinnati, via Detroit, $18.50. So far 9 or 10 western members have signified their intention of meeting at Chicago and taking the train mentioned above. An entire car has been reserved until June 10, giving opportunity for all to be heard from.

FISHKILL ON HUDSON N. Y.—The wife of Mr. Benjamin Hammond died May 28. She was very highly regarded by the people in general and the funeral was a very large one. The large number in the trade who know and admire Mr. Hammond will join in the general expressions of sympathy for him and his three daughters in their bereavement.

SLIGHT DAMAGE is reported to have been done the pea crops in northern New York and Canada by the wet weather, but definite information is yet difficult to obtain.

NEBRASKA seed growers report little if any damage to crops as yet though some fears are entertained regarding some late varieties of sweet corn.

MR. WILLIAM KELWAY of Longport, England, visited the World's Fair Grounds on his second trip to America.

Buffalo.

The first two weeks of June is the plantman's harvest in Buffalo, and it is almost more, for a few of the heaviest growers are about driven crazy. The writer, for one, has not been sane since Decoration Day. It really is an awful rush, and the extraordinary cold and wet weather of last month, right up to June 1, left everything to be done now. I see no falling off in the business before us, and as there are several thousand new homes this year, all wanting a few plants, it is likely there will be no surplus stock left in town by July 1.

Driving by the aristocratic houses of Mr. C. F. Christenson last week, I made a rush through them back to his office, where he keeps something else besides a welcome. I found his stock of bedding and market plants as fine as could be possibly grown. Christ. says he expects to fill flower beds and boxes till the 1st of August.

We met J. H. Rebstock on the street, but he was almost too busy to be civil. He has had this spring a very fine lot of pink and blue hydrangeas that have sold well.

W. Belsey reports that there is no trouble to sell, but quite a job to get the orders out fast enough. Our Washington Street Market is a great show of plants and much good stuff among it. What a difference between the flower market of now and 10 years ago! And they get good, fair prices too. The patrician as well as plebian, all patronize the market. There is a prevailing idea that plants retail cheaper at the markets than at the greenhouses, but it's a fallacy, and for equal quality the greenhouses are fully as cheap.

Trade among the store men was quite good last week and flowers very plentiful. The first week of June we had lots of weddings and all of them called for more or less of decorations. G. S.

ROSES AND PALMS A SPECIALTY.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following. Speak quick if you want them:

	Per 100
Tuberous Begonias, from the finest European collections	$ 5.00
Clematis, pot grown, 8-inch pots	40.00
Rose, American Beauty, splendid clean young stock	8.00
Fuchsias, all the standard sorts ready for spring sales, 4-inch	8.00
Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in. stuff in fine condi ion	100.00

Cut Flowers.

For the balance of this month we offer

ROSES—Brides and Mermets	3 00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00
Smilax—Good, clean, heavy stock	15 00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this Stock guaranteed A1. No charge for packing.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

NEW CARNATIONS for 1893.

Ten extra fine new varieties, Seedlings of 1890; strong, healthy growers; constant free bloomers. Large flowers on long, strong stems. Never have burst their calyx. ***READY FOR DELIVERY FEBRUARY 1st, 1893.***

PRICE, $10.00 PER 100; $75.00 PER 1000.

Out of 1,500 seedlings grown in 1890, 150 were selected for a second year's trial, and these ten varieties are the cream therefrom. Notwithstanding having had the lead among the seed plants, their second year's blooming showing a great improvement.

MRS. ELIZBETH REYNOLDS—Bright pink, very large, seldom less than 3 inches; sweet-scented.

MME. DIAZ ALBERTINI—Soft flesh pink, large, very strong; clove-scented.

RICHMOND—Bright glowing carmine. Of this variety Mr. John Thorpe says: "The Richmond is A No. 1; it coming near, very near to my ideal, 3½-inch diameter, 26-inch stem."

SPARTAN—Deep carmine with scarlet shading, large.

WILLIAM SCOTT—Large, of a deep Grace Wilder pink.

PURDUE—Pink, globular, large and full.

DR SMART—A peculiar pinkish cream, striped crimson.

WESTERN PRIDE—White striped bright scarlet.

WABASH—Deep brilliant crimson.

BLANCHE—Pure white, very prolific bloomer.

Mr. John Thorpe pronounces them all extra.
Send for descriptive price list.

Cleveland.

Decoration Day was bright and beautiful but oh what weather we did have the twenty nine days preceding. There was hail, wind and rain and the latter we had with us every day except one in some form or another. The consequence was flowers were very scarce—and not a few orders were refused. Outdoor flowers were very scarce; even Snowballs were not fully out; they are an old standby for such occasions and there was nothing to take their place. Lilac was just over and not a peony showing color. So the greenhouses were called on for everything fit to cut. We know of one grower who had his men stationed in his rose houses and as soon as a bud showed color it was cut and rushed off to his city store. In other years there has been Mountain Laurel shipped in here from Maryland and there is nothing more desirable for making up designs and baskets for the cemetery, as the flowers and foliage work in very nicely with other flowers. But we suppose they have the same backward season in the "Sunny South" as we have up here on the shores of Lake Erie, for the laurel was not in bloom.

There was more call for blooming plants than usual, especially by the school children who buy flowers to donate to the G. A. R. Committee on Decorations. There was a large demand for made up designs and loose flower from florists out of town and as there were several large funerals on Saturday the florists were generally cleaned out of salable stock. There were a few daffodils and indoor tulips in the market. L. F. D.

MR. C. THURSTON calls our attention to an error in the notes on page 944 under the head of Paterson N. J. and says: "Thurston & Sceery, of which firm I am a member, are located at 91 Van Houten St. and do not own anything outside of that to my knowledge. The greenhouses belong to C. Thurston and are located at Ridgewood and at 1 to 15 Totowa Ave., Paterson. The former contains over 11,000 feet of glass and the latter about 10,000."

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of 'Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100.

PRICE OF STAR OF 1891. $45.00 per 100.

Colored plates of Madame Crozy mailed free. Can be supplied in any quantity.
Trade lists on application. Address

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON, NEW YORK.

St. Louis.

The past week has been one of unusual activity among the florists. Stock has been good and prices stiff. Every one seems to be satisfied with the condition of the business. Flowers were used in profusion Decoration Day. Graduating exercises and weddings are calling for large quantities of flowers. Some of the designs are novel and striking.

A committee consisting of Hon. Chas. Garfield, Professors J. W. Beal and L. R. Taft, representing the Michigan Agricultural College, recently spent several days in this city studying the planting of the Missouri Botanical Garden and the various parks. The college has in its campus about one hundred acres on which are now growing many fine trees and some are of the forest primeval. Prof. Taft intends to plant on the grounds a large number of species of hardy shrubs both native and exotic. This is a step in the right direction, as it will add to the beauty of the grounds besides giving students and visitors an opportunity to study the habits of the various species.

J. C. D.

Popularity of New Cannas.

Mme. Crozy cannas are great favorites all over. In some places as high as $2 each is obtained for blooming plants in 6-inch pots. Keep your eye on the new canna Alphonse Bouvier. It will run Mme. Crozy a close race for popular favor.

W. C. C.

YOU CAN never invest $2 to better advantage than in a copy of our new trade directory and reference book.

KANSAS CITY.—Newell & Kidd have opened a second store at 1001 Walnut street, which is very nicely fitted up. John Schneider has opened a stand in the Midland Hotel. R. S. Brown & Son are arranging to devote more space to cut flowers. The Probst Bros. Floral Co. is planning to put up more glass this summer.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

A FLORAL pair of stockings is the latest horror in designs originated by the "crape chaser."

Proper Names for Colors.

THE CATHERINE MERMET AND MADAME DE WATTEVILLE.

We have previously discussed the color tone of the daughter of Catherine Mermet, the Waban, and also that of the Mme. Gabriel Luizet. In considering the Mermet and Watteville roses, in this article, I have purposely selected them on account of their similarity in delicacy of color, and their strong contrast with each other in point of character.

In the case of the Mermet, we see the same diversity of tint which we found in the Waban, and in the Watteville we will recognize the same tone of pink which characterized the Luizet, added to a creamy color, which is distictively the Watteville's own. The latter is, in fact a bi-colored rose.

It is a simple matter to discriminate between the *characters* of two colors, if we will give those colors more than casual attention. Our great fault in the use of some general name for a color, lies in the fact that the name in the majority of cases, does not carry the *character* of the color with it. Let me illustrate this idea with a few examples of very common color names.

"Peacock blue" means anything between a questionable green and a greenish blue. The green-blue color which we may find in the *side* tail feathers, is not as indefinite, it is unvarying and characteristic. The intense blue of the neck feathers is also unvarying, and is ultramarine in tone. Our general impression of abstract "Peacock blue" is entirely different from the color of these neck feathers. We should therefore define specifically the "Peacock blue" or else let the term go.

When we say "the pink of the La France rose," we are absolutely definite, because we refer to a tone of color characteristic of that particular flower. The color of the Waban rose is also exactly specific, and one acquainted with its pink, knows just what color to think about when that term is used.

But what can be said about the abstract term "Lilac?" If we will closely examine some lilacs next May, we will see fully four or five colors about them, which do not convey to the mind a definite idea of one color tone.

The pale "Primrose yellow" is a perfectly expressed color tone, because the common pale English primrose that is familiar to us, does not appreciably vary in its color. The same is true of the term "Lemon Yellow." The skin of the lemon varies so slightly in its color tone, that the name "Lemon yellow" has a perfectly clear significance in our minds.

We should be careful therefore to use definite terms when we speak of colors, then their character will be clearer in our minds. Thus, when I say of the Waban Rose, that its pink is composite, and of the Watteville Rose, that it is bi-colored, I am at once giving my hearers the *characters* of the colors, which I may afterward describe in detail.

If we will look into the heart of the Mermet we will find an unmistakable scarlet pink there; if we glance into the Watteville beside it we will see an entirely different pink; it is purer in tone and more decided in character, notwithstanding the fact that the depth of cream color (at once assuming a greenish tone) surrounding the pink center might be reasonably expected to exert some compromising influence on the pink. But this is not the case, the Watteville will sustain her dual character and she does not appreciably blend her colors.

What, then, could be more diverse than the character of color in these two roses, which to a casual observer might pass for flowers possessing a similar delicate pink? In point of fact there is not one single element of color in the two which are alike.

In the Mermet there is a fusion of color; in the Watteville each color is distinct by itself. The Mermet's pink is yellowish, the Watteville's is almost pure. Here and there on the outer petals of the Mermet we may detect a trace of pure pink, and that pink has shown itself in quadruple force in the Waban, although again overshadowed by the influential yellow.

In a word, the Mermet's pink is yellowish, and that of the Watteville is *wedded* to a yellow, while it retains its color tone uncompromised.

In describing the colors of these two flowers I should say after a careful analysis of them:

1st. The Mermet possesses a most delicate pink, composite in character and yellowish in tone.

2nd. The foliage partakes of the same character of diversity and is yellowish.

3rd. The yellow in the pink is strongest at the base of the petal and the purer pink is directly on the edge of it.

4th. The Watteville is dual in color character, the pink almost pure by itself and the creamy yellow tone of two thirds of the petal is distinctly unaffected by the pink.

5th. The Watteville's foliage is yellow green and decided in character, never blending in tone.

No two flowers could be so much alike and yet so different without attracting the attention of one who delights in color effects. Under artificial light either rose assumes a glowing quiet character of pink, and the individualities of each are in a great measure modified by yellow light. These two flowers ought never to come in contact with each other; something of subtle delicacy will be lost in both if they do.

F. SCHUYLER MATHEWS.

Bits of Bedding Seen Lately.

This has been such a rushing season for the bedding trade that it seems as it everything usable had been used, provided the plants were good. It is noticeable, that while a tremendous quantity of ivy geraniums is used, it is all the fine, double-flowered variety; the old-fashioned single one is quite out of the running.

Centaurea, which is always popular for edging, has not been very plentiful this season; its strong contrast with scarlet geraniums is admired by many.

There seems a stronger taste for bold effects in planting, as shown by the demand for plants in the subtropical class. Some fine effects are noted where Arundo donax variegata is combined with dark foliaged cannas; this striped reed is an extremely handsome thing, and easily managed, being propagated without any trouble in shallow water. It does not seem to become very common. Later in the year, one of the handsomest beds imaginable is formed by planting a large clump of the arundo, with a wide border of scarlet salvia, and it also groups well with small, dark-leaved Japanese maples.

Where permanent grouping is desired, the variegated eulalia shows well in the vicinity of dark shrubs. This noble grass is one of the finest ornaments of the permanent garden, and in any locality where it may be seen and admired there is a rapid increase in its use. We do not see many ornamental grasses used here, though both eulalia and erianthus make a handsome variation in planting.

Crotons never become common in bedding, but every year we see them used for this purpose, giving a grand effect. A croton bed in front of Delmonico's, in New York, gives promise of a fine show this summer. They look best in a bed by themselves, without the distractions of other plants. The acalyphas make a fine showing in a sunny subtropical bed. A fine combination is the use of acalypha with Lasiandra macrantha, a beautiful melastomaceous plant, with vivid Tyrian-blue flowers. Although a hot-house plant, the lasiandra does well outside during a hot summer, and the showy flowers and strong alternate leaves are very unusual in appearance.

In a shady bed we see a fine appearance attained by the use of fancy caladiums and variegated aspidistra, with a background of palms. This will be a satisfactory arrangement in a place too shady for flowering plants. Ferns ought to be used a good deal more than they are; the writer cannot recall, in a very wide circle of acquaintance, a single amateur with an out-door fernery worth noting.

Erythrina crista-galli, or coral plant, is an extremely showy thing for bedding, though not very often seen; it has flowers like a scarlet parrot's beak. Is looks very well in a canna border—it grows about the height of the dwarf cannas. A border noted, had a central line of cannas and arundo, and next to this a line of erythrinas, finished by a border of dark coleus.

Impatiens sultana has proved an attraction in bedding, as it flowers so profusely, and, when well grown, has a very neat appearance. A pretty little round bed had a center of Dracena indivisa, the remainder being filled with impatiens, with a close border of centaurea.

As a flowering border plant, or filling for a flat bed, very few things excel our old friend the verbena, and through all the changes in public taste it continues to hold favor. When the plants are pinched back through the earlier part of the season, and then loosely pegged down, so that they appear as if trailing, they form a luxuriant mat of bloom, as different as possible from the spindle-shanked little plants one so often sees.

Another old acquaintance, and a very showy one, is Gazania splendens, with its deep orange flowers. However, although seen occasionally in borders it is most effective in window boxes, or baskets, where its trailing branches, bearing deep green leaves, white underneath, show off better than in a bed.

Quite a number of echeverias are noted towards the end of the planting season; whether it is that they are a last resort one cannot say, but they have not been in high favor for some time. E. secunda glauca, surrounding a bed of scarlet geraniums, was certainly pretty, while the darker E. metallica was a good contrast with silvery variegated geraniums. So much of the effect in bedding depends on the way it is done; taste in combination is quite as necessary as good plants.

EMILY LOUISE TAPLIN.

Boston.

RHODODENDRON SHOW MASS. HORT. SOCIETY.

Owing to the lateness of the season the annual rhododendron show which was set for June 4 was postponed until June 10 and was held open for two days. It has been the custom to hold these shows open for a few hours only with admission free, but owing to their increasing popularity it was deemed wise to extend the time to two days and charge an admission fee.

Ordinarily one hall has sufficed for the entire show but the two spacious halls of the society were scarcely large enough to hold all the flowers which were brought for exhibition. The lower hall was devoted to miscellaneous exhibits while the upper one was almost entirely filled with rhododendrons and hardy azaleas, covering seven long tables arranged through the center of the hall with several smaller ones on either side, the stage being banked with hardy azaleas arranged with a background of dark maroon curtains, making a very beautiful feature of the exhibition.

With few exceptions the flowers in this hall were contributed by three gentlemen, Mr. H. H. Hunnewell, Mr. John L. Gardner and Mr. Francis Brown Hayes. The latter gentleman also contributed a beautiful sterling silver vase as a prize for 50 trusses of rhododendrons of not less than 12 hardy varieties. The vase was taken by John L. Gardner with a superb collection of trusses, conspicuous among which were the varieties Chancellor, Alex. Dancer, Everestianum, H. H. Hunnewell, Caracticus, Lord John Russell, James McIntosh, H. W. Sargent, Purpureum elegans, Sherwoodianum, Lady Claremont, Minnie, Purpureum grandiflorum, The Queen and Giganteum.

The first prize for 12 hardy varieties was won by Francis Brown Hayes. His varieties were roseum pictum, album grandiflorum, multi-maculatum, Lady Eleanor Catheart, album elegans, Caracticus, Everestianum, H. W. Sargent, roseum elegans, purpureum elegans, delicatissimum and Mrs. Grover Cleveland, a magnificent, pure white seedling raised by his gardener, Mr. James Comley.

The second prize went to John L. Gardner, whose varieties were H. W. Sargent, Everestianum, maculatum purpureum, Minnie, Sir Thomas Sebright, delicatissima, Miss Wheeler, James Bayless, roseum elegans, Caracticus, The Queen and Sherwoodianum.

Mr. O. B. Hadwin took first prize for six hardy varieties with Everestianum, roseum elegans, album elegans, azureum, album grandiflorum and Chas. Dickens.

Tender varieties were shown in great perfection and in varieties too numerous to mention, but suffice it to say that all previous attempts in this line were entirely eclipsed.

Hardy azaleas were exhibited much more extensively than ever before, but to be decidedly effective they must be cut in large branches with numerous trusses.

In the lower hall while the effect was not so striking there was perhaps more of general interest to the person with an ordinary garden or grounds. Here were displayed the collections of herbaceous plants, flowering trees and shrubs, German iris, pyrethrums, carnations, native plants and a great variety of seasonable things.

The prizes offered for monthly displays of herbaceous plants brings out many fine displays of these useful plants, thereby helping in no small degree to revive the taste for this once popular class.

The first prize in this class for 40 bottles was taken by N. T. Kidder, the second by Shady Hill Nursery Co., and the third by J. W. Manning.

German iris were shown by Mrs. A. D. Wood, John L. Gardner, J. W. Manning, Shady Hill Nursery Co., Dr. C. G. Weld and Bussey Institution. Hardy pyrethrums were well shown by Dr. C. G. Weld, Shady Hill Nursery Co., John L. Gardner, J. H. Woodford and Mrs. E. M. Gill.

Interesting displays of cut blooms of flowering trees and shrubs were made by N. T. Kidder, Joseph S. Fay and Jackson Dawson, a very noticeable feature of the latter's display of 145 species and varieties being 23 varieties of weigelias and the new Cytisus Andrium whose bright yellow pea shaped flowers have rich crimson wings.

The native flowers from Mrs. P. D. Richards and E. H. Hitchings are as usual of much interest to the public. Baskets of flowers were shown by Mrs. E. M. Gill and Mrs. A. D. Wood. Fine exhibits of cut flowers were sent in by many others, notably the collection of herbaceous plants from the Harvard Botanic Gardens and Rea Bros.; clematis from J. H. Woodford and Dr. C. G. Weld; and gloxinias from the latter; 13 varieties of carnations from H. K. Southworth; Iris Hispanica from Bussey Institution; pelargoniums from N. T. Kidder; tuberous begonias from E. W. Gilmore, with single blooms measuring over 5½ inches in diameter and double ones as large as hollyhocks. The beautiful tricolor beech was shown by Mr. T. C. Thurlow and attracted much attention. A very charming plant which is seldom seen is the pure white Clematis Montana, which was shown in elegant sprays by Mr. Joseph Clark.

The group of orchids sent by John L. Gardner was very attractive and included Cypripedium Haynoldianum, C. Dominianum, C. Lawrenceanum, Odontoglossum vexillarium, Cattleya Mendelli and Dendrobium Dalhouseanum.

From present appearances this show is destined to occupy in importance the place once held by the rose show which seems to be on the wane, not so much from a loss of love for the Queen of Flowers but from the loss by death of several of the large growers and contributors of roses and the increased interest shown in these beautiful flowers from our borders and shrubberies—these hardy

JAPANESE GARDENING. PLATE V. BLUFF GARDENS, YOKOHAMA.

things from which all may choose such as will suit their taste, their means or their convenience. A. H. F.

The Rose and Strawberry exhibition of the Mass. Hort. Society has been postponed to Wednesday and Thursday, June 22 and 23, and admission will be free.

Mr. Jos. Tailby who first sent out the Grace Wilder carnation has done more or less hybridizing for several years and has, like many others, been giving special attention to the subject recently. He is using some of the best of the hardy English Border Pinks in his crosses and already has some very promising results. One yellow variety of this year's production is grand, and, should it show up equally well in its second year it will create a sensation. A mottled red and yellow one now in its second season, of which Florence is one of the parents, is extremely prolific, resembling Florence very much in habit and general appearance of the plant. Mr. Tailby reports very large sales of the new dwarf calla.

New York.

A large orchid sale was held at R. B. Young's June 7, including a quantity of fine varieties. The great attraction of the sale was a large importation, consisting of 500 plants of Cypripedium Chamberlainianum. Many orders for these plants were received from distant buyers, some of them going as far as Canada. This plant is remarkable for the robust character of its fine foliage, as well as for the great variation it shows. The color of the foliage varies from pale to deep green, sometimes plain, sometimes handsomely marked. Its remarkable habit of bloom, showing as many as 30 flowers on a spike, adds to its distinct character. Another novelty offered at this sale was Dendrobium hybrid, Venus; it is a cross between D. nobile and D. Falconerii, combining the free flowering qualities of the former with the large and handsome bloom of Falconerii. A large quantity of Cattleya labiata was offered, also C. Mendelii, which we are told is now becoming rare in its native home.

A good many familiar faces were to be seen at the sale, among them Superintendent Hamilton, of Allegheny City, who was buying in congenial company with Robt. Grey, of Orange. Among amateurs present were Dr. Little and Mr. Barr, of Llewellyn Park, famous for his prize chrysanthemums, while some of the amateur bidders were Messrs. Newbold, Hicks Arnold and Roebling. The orchid craze in America has evidently passed from a fancy to a sound institution.

Another interesting auction at Young's was that of June 9, consisting of palms and ornamental plants from Philadelphia growers. It was essentially a trade sale and was largely attended by interested buyers. The plants were in fine condition and realized excellent prices throughout the list. At the present time these sales furnish a criterion for trade prices; the auctions have a good deal to do with regulating the wholesale business. Some large specimen palms at this sale were extremely fine, they were purchased for decorating purposes. Some handsome crotons were in the sale, many of them were bought for bedding use. Robert Craig and W. K. Harris were at the sale, receiving their usual warm welcome from their New York brethren.

The flower trade is as much in need of stiffening as last week; there is a dim, religious quietude about the wholesale stores which is unknown in the earlier months. It would be unfair to quote prices current, because there are none; people have to sell for what they can get. Carnations are a glut, indoor roses amount to very little, and outdoor Jacqueminots are plentiful. Many of them are very good, but as a rule the stems are too short and the retailers don't like to handle them. Other outdoor hybrids are generally poor, but some charming moss roses are in. Pink sweet peas appear the most plentiful of all flowers, both in the stores and on the streets. The Greeks were selling bunches of sweet peas for 10 cents—same sized bunch of Jacqs for 5 cents. Outdoor Jacqs must be cut before sunrise and sent in as early as possible before they have a chance to become overblown. A good many Marie Baumann are seen among the Jacqs, this is a fine outside rose. Business among the retailers is very quiet as many of their patrons are leaving town.

We have a flower market at last,

thanks to a number of energetic men in the trade, who have taken the matter into their own hands. For some years there has been a little informal market at "the Ferry," east 34th street, where most of the Long Island growers come into the city. However, there were many objectionable features connected with it; the only possible meeting place was a saloon and business was naturally conducted in a slip-shod way, as there was no one to manage it. So informal discussion on this subject led finally to a formal meeting with Alex Burns in the chair, where the question was finally settled. A site was settled on in the vicinity of the ferry and some preliminary rules adopted, so that the affair could be put in working order without delay. The present intention is to form a stock company with Messrs. I. Forstermann as president, W. Siebrecht as secretary, and Mr. Schultheis, of College Point, as treasurer. The market is divided into stalls, which are rented by the foot. Nearly all the large wholesalers show their interest in the scheme by taking stalls, and there is every prospect that a large volume of trade will be managed there. The market is at its busiest from six to half past seven in the morning. The gentlemen who have brought this enterprise forward deserve a great deal of praise for their energy; there is little doubt that the market will be favorably viewed by the retailers, and it should do a good deal towards equalizing prices.

The Flatbush growers speak very cheerfully of their bedding trade, but say it is now about over, for the reason that they are sold out. Everything has gone at satisfactory prices and they are now ready to prepare for another campaign.

The market dealers around Jefferson market seem to go in quite extensively for bedding vines; there is a lot of good stuff to be seen there.

Traendly, the florist, late of 225 Sixth avenue, has moved higher up the same street, where he has been showing some exceptional white pæonies.

Jas. B. Kidd, who has been employed for several years in the seed establishment of Thorburn & Co., and who has long been a prominent and popular representative of the seed interest in the east, has started for San Francisco where he is to take a prominent position in the Sherwood Hall Nursery Co. Before his departure, Mr. Kidd was presented with a gold watch as a testimonial of regard, by his fellow-seedsmen, Mr. J. Hossack making the presentation address.

The Greenwood Gardeners' and Florists' Employees Association held their third annual picnic at Schuetzen Park, Third avenue and Fiftieth street, June 9, and despite the inclement weather a large number participated in the festivities. The association is composed mainly of the employees of James Weir Jr. & Son. The firms of James Weir Jr. & Son, John Weir of Fulton street, and Fred Weir of Bay Ridge, contributed handsomely with various flowers, notable among which was a large floral horseshoe, presented to the association by James Weir Jr. & Son, which hung suspended from the musicians' gallery. Each lady and gentleman on entering the park was presented with a bouquet as a souvenir.

Do you want an alphabetical list of the roses in commerce in America, with the class, habit, date or introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

Philadelphia.

The meeting of the Florists' Club held June 7 was very well attended. In anticipation of the large number of persons who would be on hand to hear Mr. Longinette's paper the reading table was removed and the space filled with chairs. Thoughtful Dan.

Vice-President Ball opened the meeting but gave way in a short time to President Craig, who looked very swell in his dress suit. Hobnobing with the big bugs in Chicago must have made him a little vain, although he did not show it in his speech or manner.

Mr. Westcott, chairman of club house committee, made a very favorable report besides having a comfortable balance to turn in to the treasury.

Robert Crawford, of Eleventh street, was elected a member. All the store keepers are now within the fold. Mr. Crawford is a thoroughly practical man and his advent will strengthen the dealers and help them in their conflicts with their common foe, the growers.

The trip to Washington was discussed and the following gentlemen were appointed to attend to transportation and hotel accomodations: On transportation, Messrs. Westcott, Burton and Craig; on hotels, Messrs. Ball and Kift.

A letter was received from Mr. Kuyk, of Haarlem, Holland, offering a prize in the shape of a cup or medal to be competed for at the next spring meeting of the Pennsylvania Horticultural Society. The prize is offered for the best display of hyacinths. In his communication Mr. Kuyk called attention to the best varieties for forcing and gave a description of the way in which hyacinths were grown in Holland, and how difficult it was to get and propagate new varieties. The secretary was directed to thank Mr. Kuyk for his generous offer and request him to prepare a paper on hyacinths and other spring bulbs to be read before the club. His letter was referred to publication committee.

The decks now being cleared Mr. Chas. Longinette came forward with his paper on "How to conduct a retail cut flower store." From the size of the bundle it really looked as if it would take him all night to get through, but most of this turned out to be protection, to keep it from prying eyes so he said.

He was listened to quite attentively at first, but in his endeavors to make his points tell he became a little mixed. He said among the store fixtures necessary was an ice box for customers. This was regarded as a new departure by his hearers, who in their comments confused the essayist, until Mr. Westcott came to his relief and said that Charlie was all right, as Mr. Thorley, the greatest florist in the country, had a large ice box which he made so attractive that customers thought it quite a treat to get inside.

On its conclusion the thanks of the club was tendered the essayist and the paper given to publication committee.

John Burton had quite a narrow escape recently; he has sunk a new well to get a better supply of water and has put in a steam pump. In doing this the walls of the old well, some 5 or 6 feet distant, became weakened, but not knowing this Mr. Burton went down with an assistant to look at one of the valves of the old pump which was not working properly. Happening to look up he noticed some of the stones giving way and had barely time to get himself and assistant out, when about 10 feet of the wall fell in. It was a very narrow escape as they would undoubtedly both have been carried to the bottom.

It is hardly worth while to speak of business, for there is practically none to speak of. The roses coming in are very poor. La France, Albany and Guillot will now come to the front and stay there all summer. Carnations are fair; pæonies which have made quite a show for the last two weeks are done and this about winds up the large decorative flowers for the season, except possibly a few lingering hydrangeas.

Heron & Nesbit are about giving up their branch store on Columbia avenue; they have rented the greenhouses lately occupied by Lincoln Brown at 53rd and Girard avenue, in Hestonville. John Nesbit, of the firm, will have charge here and will grow palms, ferns and decorative plants for the Chestnut street store. We wish them success in their new venture. Lincoln Brown has entered the employ of John Gardiner & Co., seed merchants, and will go on the road with their goods.

K.

Baltimore.

To take the taste of the last bowling match out of his mouth, the scribe seeing that business was slack and the weather hot, concluded to try a little excursion of his own in a different direction from that taken by the bowling team. They went south to Washington, he went north to Cockeysville, a less euphonious, but, in this case, a more cheering suburb; and the inducement which marked out that particular one of the many charming towns in Baltimore county, was the desire to see the roses of Mr. Jno. J. Wight, who has the largest collection of varieties in the state, and is an amateur whose fine taste and practical skill is backed by ample means and abundant leisure.

His mansion is about two miles from the station, on a high hill, which is shaped like the back of a whale, if one could imagine a whale nearly a mile long, and is approached by an ascent so gentle that one does not appreciate the height until, from the spacious lawn, a panorama of rolling, verdant, beautiful country, stretching fifteen miles away to Baltimore, bursts upon the view; no narrow vista between hills or down a valley, but a clear sweep over all surroundings. For a few minutes, roses, bowling scores and all else was forgotten, while the eye drank in the full beauty of field and forest under a typical June sky; then, turning from the beauties of the distant view the beauties of things near at hand came out; the entire top of the hill was a long lawn, which was traversed by winding walks and dotted over with clumps of trees, every one of which had been selected and planted under the personal supervision of the owner; many of them, having been planted from thirty to thirty-five years, were large specimens, and every one a picture of vigorous health. Though not an architect and possibly a poor judge in the matter, the scribe must express his conviction that the house was the only house that would have suited the location. The library formed a wing stretching out from the main building towards the longer part of the hill and from the large windows on three sides of it and the wide veranda, views of ever changing beauty, far away and near at hand, may be enjoyed at all seasons.

Mr. Wight, who is at present confined to the house with rheumatism, sat on the porch and talked roses, talked trees, and hardy herbaceous things, until the regret at finding him unable to get about among

BAMBOOS, TOKIO, JAPAN.

his pets was forgotten in the pleasure of listening. "I planted all my own trees," said he, "because I can never get anyone to plant them right. My method, based on an observance of nature and costly experience, is to have a man with a pick, roughly pick out a shallow basin as wide as the roots of the young tree extend, then set the tree in this and fill around the roots until a slight mound is made with the good top soil, after the soil has settled completely the tree looks like one planted by nature." Whether the vigorous health of his trees is due to the manner of planting or not, certainly more perfect specimens would be hard to find.

Another thing that attracted attention was the innumerable small circular beds, about four feet in diameter, that were clustered and scattered along the walks where the lawn was free from trees, and all about the house, each containing some one variety of hardy herbaceous perennial of which class Mr. Wight is very fond. Anthemis tinctoria he pronounces the most brilliant and satisfactory of the lot, twelve plants of it in a four-foot circle forming a perfect hemisphere of glistening yellow flowers, from mid-June to September. His plants were just coming in bloom. Asked the reason for so many small beds, he said, "I find it much easier to keep varieties separate, and preserve names, by planting a small bed of each and making a plat of the whole, than by clumsy and unsightly labels. Then, again, in walking or riding around, at every turn something new strikes the eye."

Besides anthemis he was much struck with the value of Lychnis vespertina, which bears great quantities of double white flowers, like a large hardy pink.

Scabiosa caucasica, a beautiful blue flower as large as a silver dollar. Œnothera Missouriensis, blooms from June 1 to the end of September, clear yellow flowers, five inches in diameter.

Hardy pink, Mrs. Simpson, is another favorite, and so are tuberous begonias, though these last can hardly be classed with the others, which are all perfectly hardy; yet on account of their free blooming, from June till frost, they are allowed a place among the hardy things, and very fine they look.

Here and there among the other beds were half barrels sunk to the rim in the ground, with a plant of nymphæa or nelumbium, and Mr. W. is enthusiastic over them. One bucket of water per day, he says, will flush off all impurities and supply evaporation for each tub, and it is all the culture required during summer. He finds they do well in ordinary loam, well enriched with old manure. It would take too long to go over the place in detail, and the roses, which were the chief attraction, in anticipation, must be deferred till the next visit, as a sudden raid of multitudes of a slim buff colored beetle had ruined the bloom in a day.

Mr. Wight says that if restricted to one rose for open-air culture, that one would be Papa Gontier, for which no praise seems too high. He does not consider Wootton worth growing, and is not much more favorably impressed with White La France, but likes Waban, from which he gets two or three lots of bloom in a season.

The only fertilizer used, besides well-rotted manure, is finely ground bone, and the clean vigorous growth bears testimony to its efficacy.

The close of the day brought the interview to an end, and a walk around the lawn, from which, owing to the peculiar isolated position of the hill, an all-around view of from ten to fifteen miles can be had, concluded a very pleasant trip.

The exchange is generally glutted with flowers, and trade consists of spasmodic demands for funeral work, or commencements, with intervals of absolute stagnation. Even plants are going very slowly now, and the enterprising grower can soon be painting and glazing. MACK.

Buffalo.

The middle of June still finds lots of orders ahead among the plant growers, and from present appearances there is stock enough to supply all demands.

That ever useful subject the weather, deserves a special mention this time. After we had suffered with six weeks of rain, with an occasional fine day sandwiched in, the climax came last Thursday, when almost three inches of rain fell in two hours. The oldest resident remembers nothing like it. I have heard of no serious loss to any florist, and all are glad it did not come in the shape of half hail stones.

Adams & Nolan had an order for a floral canal boat, for a dead canaler, in the lower part of the city, and they tell me it was very amusing to see Mr. Adams delivering the floral emblem in a skiff, holding aloft the design, whose true element was causing so much trouble.

The roses that are coming in town, as well as those home grown, are very poor; not so much need this be the case if shade and an abundance of water be used. Among those whose whole time is occupied with the bedding-out business, there is some excuse just now for poor stock both roses and carnations, but for those who grow the above as a specialty there is no excuse. Carnations have been very abundant in Buffalo this past month and more sent in than could be profitably used.

There has been a fair amount of entertainments of late, but lilac and snowball have figured largely as decorative material, and can you blame them after many months of roses, carnations, tulips, valley, etc. They are glad to get something that really is refreshing, and as the florist usually supplies them there is a good living profit for him even in that "common stuff."

A drive yesterday through our beautiful park and also through our unequalled "Forest Lawn" cemetery convinced me that they never put on appearance more lovely. The groups of hardy shrubs, so well planted in many locations in our park, are now for size and condition, just about perfection. What a good thing they don't all flower at once.

In last week's FLORIST Miss Taplin has an interesting article on vines or climbing plants. We grow most all she mentions and besides have to grow many more. The true climbing plant, such as Cobea scandens or Pylogyne suavis there is only a limited sale for, but the trailing or drooping plants suitable for vases and veranda boxes, we have to grow in immense quantities. In fact before the season is out the vines are the scarcest articles in the market. The leading dozen vines or drooping plants used here are as follows. These are used for hanging baskets, vases and veranda boxes. I will place them in order as I estimate their value: Vinca, the variegated and Harrisonii, Abulilon Eclipse, Senecio (German ivy), Glecoma rotundifolia variegata, Lysimachia (money vine), ivy geraniums in several var., nasturtiums—a breed we have which droops just right, sweet alyssum—double, lobelias of the erinus type, lophospermum, maurandya, petunias—good singles are best and they will droop after a time. There is at least half a dozen more used but the above are the staple articles. I do not include cobea, solanum, English ivy or Pylogyne in this list as they are climbers and not fit to use in vases, etc.

Lawrence & Giddings had a very successful opening on Friday and Saturday last. They made a fine show, but had none too many flowers to go round among their many friends. G. S.

Chicago.

At the last meeting of the Florist Club the table was decorated by two handsome blooming plants of campanula, brought by Mr. Stromback, headgardener at Lincoln Park, and a vase of Malmaison carnation blooms, averaging four inches across, brought by Mr. Kirkham, of Maywood.

The campanulas were in six-inch pots, foliage perfect to the bottom, and masses of magnificent blooms. Mr. Stromback brought them to the meeting to substantiate by a visible example what he had claimed at the last meeting for the campanula as a pot plant. All the retail men present agreed that such plants would sell readily at $1 each, and the growers stated that at 50 cents each, in wholesale lots, there would be a good margin for the grower.

Regarding their culture Mr. Stromback said: Sow the seed now, prick the seedlings out into boxes when big enough to handle, and later plant outside in rows about fifteen inches apart, the plants about twelve inches apart in the rows. Before frost comes lift the plants, pot and keep over winter in a temperature of 45 to 50°, till the latter part of February; then shift to larger pots, using good rich soil, and place in a little more heat—say 60°. Keep as close to glass as possible. To have symmetrical plants they must have plenty of room.

Among the Malmaison carnations brought by Mr. Kirkham, was one measuring 4½ inches across. This seems to reach the "ideal" as far as size goes. And though the calyces of all were sadly split the form was good and not ragged—probably due to the fact that the splits were equally distributed all around the calyx. The Malmaison carnation is very popular in England, and when visiting there last year Mr. Kirkham obtained some cuttings for trial here. The plants from which the flowers shown were cut, were grown in four-inch pots, to single flowers, the plants disbudded with the exception of the crown bud. Mr. Kirkham says that they can be brought in for Easter. They should be kept near the glass and always on the dry side, as, otherwise, the flowers are quickly injured. The retail men thought that such flowers would sell quickly over the counter at $2 a dozen, at Easter. The plants should never be topped.

Mr. Singler stated that he was now propagating chrysanthemums for cutting next fall, and would try a house of these late propagated plants for that purpose. He intended keeping the plants in pots, but was advised to plant them out on the benches to save labor and expense as well as to secure better results. Regarding his carnations he said that the record for a house of Tidal Wave, containing 1,800 plants showed that he had cut, up to June 1 (beginning last September), 65,000 flowers, an average of over thirty-five flowers to a plant. He calculated that the house would produce not less than 90,000 blooms before the season was over. In his record he takes account of salable blooms only.

Mr. Anthony asked for opinions as to why Ampelopsis Veitchii had been winterkilled so much more than usual. There was quite a diversity of opinion. Some thought that protected plants had suffered most—owing to the open winter—but according to the observations of others unprotected plants has suffered just as severely. Nothing positive was arrived at, but in the discussion it was brought out that plants growing on walls in the vicinity of a chimney had nearly all been killed and this was attributed to the warmth of the wall. Mr. Stromback had noted the same thing in ampelopsis growing on the walls of the pumping station at Lincoln Park. He added that a new ampelopsis they were trying at the park—A. Engelmanni—had come through the winter admirably. He believed it would in time supplant Veitchii in this climate. The foliage is a little coarser than that of Veitchii, but its habit of growth is the same. Ampelopsis Roylei was also favorably spoken of, but Mr. S. thought that Engelmanni was still better for Chicago and vicinity.

A question having been raised as to the correct pronunciation of a plant name used by a member, and Mr. Benthey having exhibited during the discussion a familiarity with the construction of Latin words, he was requested to prepare something upon the subject for next meeting, and to submit with same a list of names most commonly mispronounced, giving the correct pronunciation in each case.

Mr. Neiglick told of having hydrangeas in excellent bloom at Christmas, and was requested to prepare a description of his practice for next meeting.

A proposition that the club offer a special premium at the fall exhibition of the Horticultural Society, met with favor, and the general sentiment was in favor of offering it for improved carnations. Mr. Anthony was requested to formulate such a premium in language that would cover the desired points, and present same at the next meeting for discussion and action.

The decorations at the Pullman wedding June 7, by Thorley, of New York, were very fine, but owing to the recent death of a member of the family were not so elaborate as at first intended.

The arrangements in the drawing rooms were superbly done. These rooms are very large, and of course like everything else in the Pullman mansion elaborately furnished. The finish is in ivory and gold and the flowers used were roses and white pæonies. The six large mirrors were draped with smilax except the one immediately in front of the bridal party, this being treated in Asparagus plumosus with a heavy fringe of Bride roses; at the bottom stood a handle basket of Brides, around which roses of the same kind were scattered loosely. The draping of these mirrors was certainly the most artistic we have ever seen, no two being treated alike and all equally well done.

The ceremony took place at the west end of the room, and starting at the chandelier, about 15 feet back from the west wall, a canopy was formed, six large garlands of white pæonies with their own foliage being held together at the apex with a large cluster of the same flowers tied with white sash ribbon. The bridal party entered through an aisle 50 feet long. This aisle was formed by 10 little pillars, 2½ feet high, made of white pæonies, the pillars being placed on a line, 10 feet apart and connected by white sash ribbons, fastened to each pillar with a large bow. The remainder of the decorations consisted principally of loose flowers arranged in vases or scattered around loosely in appropriate places. The one large mantel was banked with La France, Brides, cypripediums and white lilac. Around the rooms were placed some half a dozen elegant plant stands filled with choicest exotics.

Outside of the drawing rooms the decorations were very simple, consisting altogether of loose flowers and decorative plants, with the exception of the two dining tables. One was a buffet table set in the dining room, the centerpiece of which was a neat oval arrangement composed of white lilac, Bride roses and anthuriums. The other was a round table set in the conservatory for the bridal party, on which 20 covers were laid. This table was placed directly under the circular dome of the conservatory and around it in a half circle were placed some very choice decorative plants, among which might be noted some splendid specimens of araucarias, Areca lutescens, kentias, etc. The table was built around a superb specimen of Chamærops humilis, the very palm by the way which has graced, while still in the possesssion of a local florist, every Exposition ever given in this city. Starting at the trunk of the palm, as it appeared above the table, some Asparagus plumosus was gracefully draped around it running in light sprays up among the leaves, splendid pieces of orchids (Odontoglossum citrinum) being fastened among the asparagus. The whole was lit up by tiny electric lights arranged among the foliage. This part of the arrangement was simply perfect. Now we hope the decorator will forgive us if we pass a criticism upon the rest of the arrangement, which consisted of a round plateau six feet in diameter and nearly two feet high in the center, thus completely obstructing the view across the table. This was composed of four sections, one of superb blooms of cattleyas, two of Cypripedium Lawrenceanum and one of moss roses. Starting at the points where the sections met, four large and rather heavy sprays were laid around the table, of the same flowers that composed the plateau, with the addition of some white lilac. The color effect of this decoration was good so far as the flowers went, but the combination of pink moss roses, cattleyas and the yellow ware of the table was unfortunate.

The bride carried a very large bunch of Odontoglossum crispum and lily of the valley, the maid of honor one of the same size, composed of pink sweet peas. Both

bouquets were arranged in the old conventional style, rather flat at the top, the most graceful part being the ribbons. These narrow ribbons, perhaps fifty yards or more for each bouquet, were looped, twisted and knotted in a most artistic manner, and were certainly a great improvement on the broad and heavy ribbons generally used.

The bridesmaids, nine in number, carried an arrangement in the shape of a crescent wreath eighteen inches in diameter. Mignonette was the principal flower used with the addition of moss roses and cypripediums. These crescents were tied with a very broad green ribbon. We suppose this is the very latest in styles for bridal parties, but we must confess that we could see no real beauty in them.

The grounds outside have been entirely remodeled under the artistic hand of Mr. Barrett, of New York. On the terraces that lead up from 18th street to the conservatory, we noticed four grand specimen rhododendrons in full bloom. The plants are placed in large square boxes, made of polished oak, superbly finished. The base is planted with vines, ferns, and bright scarlet geraniums. But purple rhododendrons and scarlet geraniums was certainly a very unfortunate combination.

The out-door display taken as a whole was very fine, although the bedding was too crowded to give the best effect. All the plants, trees and shrubs that were used were the choicest that could be bought. A pair of Phœnix dactylifera that stood on the lawn were the finest we have seen for many a day. In conifers too, there was a very fine collection, which made a grand show.

Lake Forest was again visited by hail June 6. F. Calvert & Son lost 1,500 lights of glass and Thomas Appleton 250 lights. The hail played some curious freaks, in a number of cases coming with such force that the stones drove through the glass without cracking the light, leaving a hole that looked as though it had been cut out with a diamond.

J. C. Vaughan made a flying trip to New York last week.

We had a tremendous wind storm and heavy fall of rain with some hail last Monday, but no damage to greenhouses is yet reported.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

The Atlanta Convention.

CONCLUDED.

It was after dark and in a regular southern downpouring shower when Fort Valley was reached, but the rain was soon over and moon and stars were shining. A convenient hotel accommodated a large number, others were taken to neighboring homes. It fell to our good fortune to be among those who were to go out to the great peach farm already of national fame as Hale's farm, the largest peach farm in the world owned by an individual. He had fifteen under the roof of his nice, new house, and all who know J. H. Hale, of Connecticut, need not be told that it was a pic-nic for all the several days that the guests of himself and wife remained. Hale is only down for a few weeks helping to keep things moving and will then return to Connecticut to handle another big peach crop, that, like the noted one of 1889, escaped the frosts of winter and spring.

It would make a long story to tell of all there is of interest to be seen in and around Fort Valley, Houston county, Georgia. It seems to well deserve its title, "The Peach Paradise of the United States." The attractive little city has 2,500 inhabitants, near the center of the state, on a high, level plateau 700 feet above the Gulf of Mexico, and when frosts kill the fruit blossoms on the lower levels, many miles further south, here they bloom and reward the grower with bounteous crops that can be placed in the great cities of the north in from 48 to 70 hours. And while it is now only the very earliest days of June, hundreds of crates of beautiful peaches—Alexanders—beautifully colored and ripened by the southern sun are being shipped daily from several points in the county. Upwards of 1,000,000 peach trees are already planted in great orchards and thousands of acres more that have for years been ruled and abused by "king cotton" are preparing to grow one of Pomona's choicest gifts, and pears, apples, plums and grapes as well.

Several large tracts of orchard planting are owned and managed by stock companies, among which may be mentioned the Ohio Fruit Land Co., with 1,250 acres, and $25,000 capital stock; the Albaugh Georgia Co., with 1,170 acres, $50,000 capital stock, and 80,000 peach trees planted. One orchard of 100 acres and 10,000 Kieffer pear trees is another sample. One of the places visited, so far the best developed, is that of E. M. Rumph, near Marshallville, on which from one orchard of peaches covering 200 acres $50,000 is said to have been made in 1889.

The Hale orchard is planted upon an old cotton plantation, the former owner of which seemed to have some conscience and heart in soil culture, and was therefore not quite so much of a land destroyer as many others, and the portion of mother earth which he held in trust was therefore not as badly "run" as the average. But all who know the Hales know that even this condition was not foundation enough for them, and so several thousand dollars worth of fertilizers were used at the start, mostly cotton hull ashes, cotton seed meal and rock phosphate. It is less than seven months since the work of building this great peach farm commenced, and yet to-day on that 900 acre farm are growing in the most thrifty manner 101,000 peach trees planted 13 feet each way, in rows one and a half miles long, besides hundreds of thousands more of young trees in nursery rows; two and one-half million Marianna plums to be used as stocks for budding more peach trees; a large variety of small fruits, including 60 varieties of strawberries, being tested in this soil and climate. One hundred acres of what is universally admitted to be the finest piece of corn in the county—and we saw nothing finer in all the trip from Washington to Georgia—is a sight to behold. Among the trees are growing hundreds of acres of cow peas, to be plowed under as a fertilizer, and to be immediately followed by scarlet clover which grows here all winter and can be turned under when two feet high next spring. The Hale farm is a beautiful, level plain, smooth as a prairie, and from the house every acre of it can be seen. In cultivation all the improved implements are used, and modern wide-awake "intensive" culture on an "extensive" plan is the rule. Before planting the farm was all carefully surveyed, being laid out in blocks 500 by 1,000 feet and divided by avenues and streets. The avenues run north and south, the streets east and west. Very appropriately the avenues are named for the peach growing states, with Connecticut in the well-earned center, with Georgia on one side and California on the other; then Delaware, Michigan, New Jersey, Missouri and Maryland. The streets are named for well known horticulturists, living and dead, Wilder, Augur, Berckmans, Barry and Earle.

The favorite peach of all this region is the Elberta, a native of this county, one of a lot of 1,200 seedlings raised by Mr. Rumph, before spoken of, and judging by the grand crop we saw upon tens of thousands of bearing trees during the days of our visit, it may well be said that it "is chief of twelve thousand and altogether lovely." The cultivator who can produce such a new fruit is indeed a benefactor of mankind. The Hales show their faith in it also, as out of their 101,000 trees already planted 60,000 are Elberta. Their other varieties are as follows: 10,000 Mountain Rose, 9,000 Crosby, 6,000 Stump the World, 5,000 Lady Ingold, 4,000 Tillotson, 4,000 Thurber, 3,000 Late Crawford.

A nice piece of Alfalfa, together with experimental plots of milo maize, sorghum, and various grasses, are being grown to determine their value as soiling and fodder crops.

The whole of this enterprise, developed in so short a time and already so full of promise, was a surprise to the visitors and to others who were in the long procession of carriages furnished by citizens who were glad of an opportunity to show the advantages of their pleasant land, and who drove over this grand farm on this round of sightseeing.

And all this has been done with the native colored help, the darkey and the mule, (but the Hales have some good horses as well), under the direction of a bright New England young man, Mr. J. T. Molumphy, one of the boys that the Hales trained on their Connecticut farm, who, down here, far from friends and home, has, in the absence of the proprietors, worked for months, learned to use and control the labor, and to present on June 1 an orchard farm, well planted and cultivated, clear of weeds and a model in every way. If those who saw it with eastern, northern and western eyes were delighted at such thrift and management we may well believe it did "surprise the natives." But the spirit of enterprise is abroad and in the most pleasant relations possible those from afar and those to the manor born are working out one of the grand enterprises of the "New South," and all tending to the glory of our favored land.

California must look well to her laurels, for nowhere outside of the Golden State have we ever seen such great orchards, such model growth of trees and vines, such perfect tillage, and all the conditions of soil and climate so nearly ideal. And this is nearer by 2,000 miles to the markets in which competition will each year become closer. A young giant is awakening in middle Georgia, strong and healthy in his early youth he has entered for the race, and those who would hold their own with him must be up and doing.

MORTIMER WHITEHEAD.

MOSCOW, IDAHO.—The Mix Co., proprietors of the Moscow Nursery, have purchased the entire plant of the North Idaho Nursery, located on American Ridge.

VICE-PRESIDENT JEWETT was in Chicago this week, and while here visited the World's Fair grounds.

RICHMOND, IND.—Gause & Bissell have dissolved partnership.

KENOSHA, WIS.—Lewis Turner has added a new rose house 18x100.

SOUTH ORANGE, N. J.—Mr. Alex. McPherson has rented the greenhouses recently occupied by the late Frederick Mau.

DANVILLE, ILL.—Adam Balmer, manager of the florist business of J. G. English, has purchased the whole plant and will remove it to Decatur, Ill., where he will start in business for himself.

SHEBOYGAN, WIS.—Miss A. Schucht is to be married shortly and will retire from business. The store at 707 8th street will be continued by her father, Otto Schucht, in connection with his greenhouses.

SANDUSKY, O.—Robert Gutzeit and Robert Birchard have commenced the construction of a greenhouse 32x66 at the corner of Adams and Warren streets and will start in business under the title Sandusky Floral Co.

WEST SUPERIOR, WIS.—C. J. Pult, J. J. Pult and G. Miller have recently built a greenhouse and store at the corner of Belknap and Lamborn avenues, and will conduct business under the title, Superior Floral Co. They have secured a large piece of land, a short distance from the city, where they will make extensive improvements next season.

HOME GROWN MUSHROOMS.

* * * * *

A New and Profitable Industry for Florists, Truckers, Gardeners, Farmers, Village People and Suburban Residents.

* * *

WHEN it is considered that millions of pounds of Mushrooms in cans are annually imported into this country and sold to consumers at high prices, notwithstanding the fact that the canning process robs this delicious esculent of much of its flavor, the reason for the rapid development of the Mushroom growing industry among florists, truckers and others here will be readily apparent. Home grown Mushrooms are so much superior in quality that consumers are willing to pay double the price of imported for them, thus making a ready and profitable market for the home producer. During the past season it is safe to say that the production of home grown Mushrooms has increased at least 100 per cent. over that of the previous year. Some growers have expressed the fear that the business would soon be overdone, but we think the fear is entirely groundless, as the increase in demand has more than kept pace with that of production. The fact is, the market for good Mushrooms is practically unlimited, and no more profitable industry can be engaged in by those who want to grow something there's money in, or who wish to have a bountiful supply of the "King of Esculents," for their own tables.

Send for our Primer on the culture of Mushrooms (free), or for either of the more elaborate books named below. We recommend Mr. Falconer's book as the most complete, and can assure our customers it is well worth the difference in price.

Gardiner's Celebrated English Mushroom Spawn.

* * *

The increasing interest that is being taken in the Mushroom as a profitable market crop, has enabled us to greatly extend our facilities for the supply of reliable Spawn, and customers can at all times depend on receiving Spawn that is absolutely fresh and of the uniform superior quality for which our imported Spawn is celebrated. One of largest commercial growers writes: "Your Spawn fills the bill better than any I have bought elsewhere." And such is the uniform experience of all who have bought of us, and our trade now extends from the Atlantic to the Pacific, and even beyond the borders. In growing Mushrooms, the first thing to be done is to get good Spawn. If this is not done, all the labor of preparing the beds, etc., will go for nothing. It must always be fresh, well spawned and in good condition. A brick of Spawn weighs about one and one-quarter pounds, and is usually divided for planting into twelve pieces, and these pieces are inserted in the bed about nine inches each way. The necessary quantity of Spawn for any given bed surface may be easily calculated by this rule.

Orders booked now for delivery as wanted. $8.00 per 100 pounds. Special rates on large lots.

HOW TO GROW MUSHROOMS.

The details of Mushroom culture are given concisely in our sixteen page treatise, entitled

"MUSHROOMS FOR THE MILLION,"

a copy of which may be had free for the asking. We have also the pleasure of offering a new treatise by Mr. Wm. Falconer, a recognized authority on Mushroom culture. Mr. Falconer's book is entitled

"MUSHROOMS: HOW TO GROW THEM,"

and is the most elaborate, complete and practical ever written, and should be in the hands of who grow, or intend to grow, largely for the market. The publisher's price for this book is $1.50: by special arrangement we are enabled to offer it to our customers for $1.35 by mail, postpaid. We have also Mr. Robinson's work on the Mushroom, entitled

"MUSHROOM CULTURE,"

a revised edition, with numerous illustrations. Mailed free for 50 cents.

The Seed Trade.

W. H. MARCON, of Steele Bros. Co. Toronto, visited Chicago, June 11.

SEED GROWERS in Connecticut report no damage from rain and that the onion seed crop now promises well.

REPORTS from pea crop in northern central Wisconsin would indicate that the wet weather has done some considerable damage.

REPORTS from the seed crops in Nebraska indicate splendid weather and a good general outlook, although the stand of sweet corn is not so full as usual.

MR. J. B. KIDD spent last Saturday in Chicago, and in company with Mr. W. H. Marcon and J. C. Vaughan visited the latter's greenhouses at Western Springs.

ONIONS growing for seed on D. M. Ferry & Co.'s Grand River Farm are looking well in spite of much rain. About one half of their acreage is planted to Red Wethersfield.

MR. J. B. KIDD, for sometime with J. M. Thorburn & Co., left June 8, for San Francisco, to take charge of the seed department of the Sherwood Hall Nursery Co. Mr. Kidd has the best wishes of his hundreds of friends in the trade.

Directory Corrections.

In Massachusetts, cross out Rea Bros., at Norwood Central. They are also on the list at Norwood, so the first address is a duplicate.

In Kansas, add to Independence: F. Barnes, William H.,—4. Mr. Barnes has been in business here for many years and his name appeared in our list for 1887, but as we received no response to our letter of inquiry, when compiling later lists his name was omitted, which it now appears should not have been done.

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

L. B. 338. **ALBERT M. HERR, LANCASTER, PA.**

EVERY FLORIST IN THE LAND

Should have a good bed of the New Giant Forcing

DAISY SNOW CREST

Introduced by Mr. H. A. Dreer.

We are Headquarters, and have 20,000 plants to offer at $1.50 per doz.; $10 per 100; $80 per 1000. It is easily and rapidly propagated by cuttings and division, and **NOW IS THE TIME** to get up a stock for fall planting. It is double the size of Snowflake and vastly superior in every way. Many of the blooms were larger than a silver dollar as we grew them last winter. It is a free and constant bloomer, requiring the same conditions as violets.

We also have a heavy stock of **Snowflake** that we wil close out at $1.50 per 100; $12 per 1000, for the next three weeks.

Yours very truly,

J. C. GIBSON, Woodbury, N. J.

CHRYSANTHEMUMS.

2½-inch pots, 25 leading sorts for cut flowers, $3 per 100; $25 per 1000.

F. A. BALLER,

BLOOMINGTON, ILL.

St. Louis.

The Missouri Botanical Garden was visited by 1,600 people Sunday, June 5, that being one of the Sundays on which the trustees are permitted to open the garden to the public.

90° in the shade, flowers in abundance, prices declining.

Florists' Club met Thursday. Premium list of the chrysanthemum show completed. The society voted to invite the S. A. F. to St. Louis in '93. The committee on the revision of the constitution made its report, which was laid over according to rules.

The Missouri State Horticultural Society held its semi-annual meeting at Chillicothe, June 7, 8 and 9. Three prizes were given on cut flowers. Mr. Conrad Hartzell received first premium on his collection of apples, consisting of a dozen varieties in perfect condition.

Mrs. Ellison is offering her business for sale. J. C. D.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

OUR CUT FLOWER BUSINESS

Demands all our growing capacity, we have therefore decided to close out our entire stock of plants this season. We start the ball rolling with the following Speak quick if you want them:

	Per 100
Tuberous Begonias, from the finest European collections	$ 5 00
Clematis, pot grown, 8-inch pots	40.00
Rose, American Beauty, splendid clean young stock	8.00
Fuchsias, all the standard sorts ready for spring sales, 4-inch	8.00
Latania Borbonica, we also have more of this elegant palm than we need and will sell a few 5 and 6-in. stuff in fine condition	100.00

Cut Flowers.

For the balance of this month we offer

ROSES—Brides and Mermets	3 00
" La France	5.00
" American Beauty	8.00
Carnations—Garfield, long	1.50
" Garfield, short	1.00
" Hinze's White, long	1.50
" Hinze's White, short	1.00
Smilax—Good, clean, heavy stock	15 00

Bear in mind this stock is all grown on the place and handled but once. Cut flower buyers know the importance of this. Stock guaranteed A1. No charge for packing.

ADIANTUM CAPILLUS VENERIS—The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

The New Cannas, Mme. Crozy AND Star of 1891.

We have without question the largest stock of these New Cannas in the United States, and have probably more available stock than is held by all other American houses combined.

At the present time we have 300 running feet of greenhouse, 20 feet in width completely filled with these valuable varieties. The price of these Cannas may seem high, but we consider them the most valuable novelties that can be purchased by florists at the present time. Although these prices are high, we will not cut these rates, or sell for less than the prices here quoted this season, and will not unload them at the end of the season as is often done by many houses in the trade, to the injury of the purchasers who have bought early in the season at high prices. We consider these Cannas are worth fully all we ask for them to grow on for another season, and will guarantee buyers that we will not offer them at less prices than here quoted this season, so that buyers can purchase them with confidence. Every florist who has not secured a stock of these Cannas by this time, should do so at once. The demand for these New Cannas is increasing constantly for they are far superior to anything else in the French line, and it will be wise to invest in these to the exclusion of every other of the so-called French varieties that have been offered up to this time. They are head and shoulders above everything else. Send in your order at once, and secure the stock while we have it, for while our stock is large, we do not think it will equal the demand before the season of 1892 is ended. Our plants are *extra strong* and well established, with fine tops, from a foot to 18 inches in height, and can be shipped either from pots, well established, with a fine ball of earth attached, or can be shaken out, and most of the soil removed, in which case they make a much lighter package. In ordering, please state which way you prefer to have the plants shipped you; for long shipments they can go as well with almost all the soil shaken out. Park and Cemetery Superintendents and florists generally should make large plantings of this stock, which will make a fine display for them, and the increase of the stock will be one of the best investments that can be made for another year.

The flowers of "Madame Crozy" are a flaming scarlet bordered with gold, a marvelous combination of colors, having all the delicacy and loveliness of the rarest orchid. It produces all the wealth, richness and tropical luxuriance of foliage of the common kinds, added to which is the gorgeousness of their flaming panicles of bloom, which are borne in immense heads at the terminus of every shoot. The individual flowers are five inches in diameter, and when the large size of the flowers and the large heads of bloom are taken in connection with the freedom with which it blooms, it makes one of the most attractive plants for bedding it can be possible to conceive of; it also makes elegant plants for the conservatory both summer and winter—in fact it is one of the finest plants for conservatory decoration there is. Every shoot blooms, and as often as a head of bloom passes its prime another shoot pushes beyond it, and each shoot flowers three, four or five times in succession. As the plants are constantly throwing up shoots from the ground, they continue a mass of most gorgeous bloom.

The flowers of "Star of 1891" are not so perfect individually, but are equally brilliant and indispensable, as it is more dwarf in growth and can be used in planting with Crozy to advantage on this account.

PRICE OF MADAME CROZY, $60.00 per 100.

PRICE OF STAR OF 1891. $45.00 per 100.

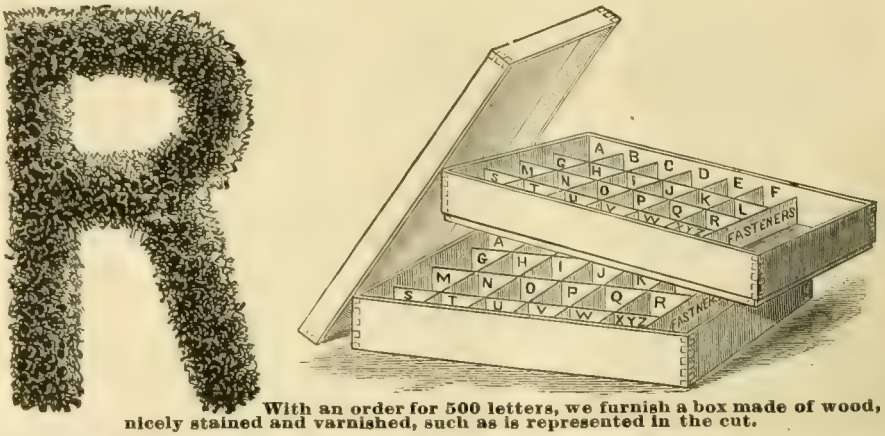
Colored plates of Madame Crozy mailed free. Can be supplied in any quantity.
Trade lists on application. Address

F. R. PIERSON COMPANY,

TARRYTOWN-ON-HUDSON NEW YORK.

Toronto.

Social chats between members of the profession are few and far between, and necessarily brief just now, ergo—your correspondent has had very little opportunity of picking up any items of news worthy of a place in your paper, but the fact of every one being in such a state of hustle should be a good sign that business is rushing. How prices are going, whether the bears or bulls are uppermost, I have been unable to ascertain. After the rush is over one will probably be able to see at a glance, on meeting a florist, by the lines in his face whether he has been making money or not.



The weather has been particularly favorable for newly-planted-out stuff (also to the weeds), and though most of it has been planted out considerably later than usual, it will probably be just as far ahead. Refreshing showers, mild days, and cool (not cold) nights, often with fog, have been the general thing. Some really hot weather now would make things fairly jump.

The farmers seem to have positively nothing to grumble at this year, truly a phenomenal state of affairs, and two or three I have spoken to say that prospects at the present time point to immense crops of hay and cereals. Perhaps farm talk may seem a little out of place in a florists' paper, but on giving the matter some consideration one finds that the state of trade in general (floral and otherwise) is almost entirely regulated by the state of the crops. E.

World's Fair Notes.

The Horticultural Department has received four large plants from Mr. D. S. Brown, of St. Louis; one a tall specimen of Cocos plumosa, about 35 feet high, the others a Ravenala madagascariensis, a Caryota urens and a bamboo, all about the same height.

The Landscape Department recently received four car loads of plants from California, consisting mainly of palms and dracænas; among the latter several hundred D. indivisa are very fine, most of them stand from 8 to 14 feet high. There are also a few good D. Draco and D. australis in the lot. In palms we noticed some large Corypha australis, Chamærops humilis, Phoenix lancifolia, P. canariensis and P. dactylifera. In conifers a handsome group of taxus was notable, also a few very good araucarias.

With an order for 500 letters, we furnish a box made of wood, nicely stained and varnished, such as is represented in the cut.

GEM STEEL WIND ENGINE AND GEM STEEL TOWER

The GEM ENGINE, when furnished with Graphite Bearings, requires no oiling, no climbing of towers, no hinged or frail-jointed towers and practically no attention, yet is more durable than other Wind Motors that require all this, and more unique in finish. The GEM TOWER combines beauty, strength, durability, simplicity to the greatest extent and has no equal. Both are manufactured and guaranteed by the oldest and most reliable Wind Mill Company in existence, and who build the Halladay Standard Pumping and Geared Wind Mills, the Standard Vaneless and U. S. Solid Wheel Wind Mills, Pumps, Tanks, Horse Hay Tools, &c. No other company offers equal inducements. Send for Catalogue and Prices.

Washington.

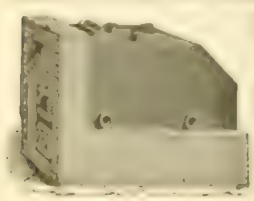
Flowers plentiful, quality only fair, demand good. Roses medium in quality, best La France 75c and $1 per doz. Coleus, geraniums, heliotrope and other soft stuff abundant, bring 50 cents per doz. from two and three-inch pots. The florists seem well satisfied with the spring trade.

Mr. G. H. Brown, the able Sup't of Public Grounds, is a very busy man just now, looking after the planting of the various reservations about town and at night he is busy working up his designs for the Corps badges which he proposes to work out in plants. He began this work last Monday. I may have more on this subject next week.

The parks look beautiful, and their newly planted beds of soft stuff and filled vases take the place in part of the shrubbery, which was so lately covered with bloom. The only shrubs now in bloom are Deutzia crenata fl. pl., which is simply perfect with its long bending boughs of white pink tinged flowers; Weigelia floribunda, the darkest of all and the last to flower with us, and yet the least showy; strong plants of Viburnum plicatum are still to be seen in almost perfect flower, one of the features which recomends it is its lasting quality—both on the plant and after being cut; its flowers are smaller than some of the others, foliage rich dark green, forming a good contrast with its beautiful white flowers.

Tuesday evening, June 7, was the regular meeting of the Washington Bowling Club. Unfortunately some of the best bowlers of the home club were unavoidably absent; this was to be regretted as ten of our neighbors of the Baltimore Club came over expecting to show our team what they could do on the much talked of short alley. The visitors present were Messrs. Halliday, Berll, H. Bauer, Kress, Moss, Weidey, Perry, Hoffman, Frederick and F. Bauer. After playing several practise games, a match between the two cities was arranged. The members of each team were drawn by lot. The following are the scores:

WASHINGTON.		BALTIMORE.	
W. Gude	152	H. Bauer	170
Cooke	180	F. Bauer	108
Bowdler	222	Halliday	158
Miller	151	Frederick	99
Oliver	178	Hoffman	107
J. Clark	107	Perry	121
Total	990	Total	763



Where would the boys from the Monumental City have been if our heavy bowlers had been present? When the Washington Club visited the Baltimore bowlers a few weeks ago, they defeated them on their own grounds by 161 points per man. I trust the Baltimores will not get discouraged but will continue their friendly relations toward us.

C. LESLIE REYNOLDS.

Hardiness of Lilium Wallichianum Superbum.

GREENFIELD, MASS.—The heaviest and most destructive hail storm ever known in this vicinity riddled the greenhouses here the afternoon of June 14.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date of introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

How to Conduct a Retail Cut Flower Store.

BY C. LONGINETTE.

[*Read before the Florists' Club of Philadelphia at the June meeting.*]

Never having had the management of a retail cut flower store, or any other store for that matter, I do not see why the committee which has these matters in charge, or the president, or whoever it was that caused all this trouble, selected me for this work. However, having passed quite a number of the days of my life in the florists' business I will give you the benefit of some of my experience and offer a few suggestions that I hope may be of some use to at least a few of you.

In the first place it is absolutely necessary to have your store in a good location—no entry way, or cellar door, or blocking up the street with a lot of youngsters carrying baskets. I don't know anything about this kind of a business excepting that it plays hob with the man in the store, who after he has stocked up in the morning and has everything in good shape for a good day's business has all his calculations knocked into a cocked hat by almost the first customer who tells him, when asked one dollar per dozen for buds, that he has just bought the same kind fully as good down on the street for 50 cents per dozen. On investigation we find this statement to be only too true, and the fakir just laughs, and when the dealer speaks to his growers about the matter they declare by all that is good and holy that the fakirs get no flowers from them. They certainly get flowers from somewhere and sell for a profit at a price which to the storekeeper is less than first cost.

When the store is opened care must be taken that it is well stocked with baskets, boxes, wire frames, etc., and when I mean well stocked I don't mean overstocked. For the man who fills up in large quantities at first is, before long, sure to have a lot of unsalable goods on hand, crowding up the space necessary for novelties, which should be an essential feature in a well regulated flower store. It is poor policy to have nothing but shop worn goods to show customers.

If the store is in a BRUNNER neighborhood boxes for loose flowers and paper for wrapping must be A No. 1. Boxes with inscriptions such as "Patent glove fitting," "Gents half hose, fast black," "All linen suspenders," "Real balbriggan" and the like, will never do for this man's trade. Old newspapers and grocery store string might have done 10 years ago, but to-day he must select a delicate and distinct shade of paper and twine to match. His boxes should be of different sizes to suit the stems of the roses, and like the wrapping paper of a shade of color all his own. A man to-day if he keeps his eyes open can tell if his trade is slipping away from him by watching the people on the street and noting the color of the package they may be carrying.

After the store is fixed up, that is to say, after the goods purchased have been nicely arranged and a good roomy ice box convenient to the counter has been provided, you are ready to buy a stock of cut flowers. Now, right here is where the dealer lives or dies, so far as his business is concerned. If his trade wants Brunners, Luizets or Laings or other high class flowers and he fills his ice box with Perles, Gontiers and the like because he can buy them cheap, he will soon have no business, as his neighborhood wants fine flowers and the people will go elsewhere if he does not keep them, while the people who want a cheaper class of flowers will not come to him, for they are sure from his location that he must be a high priced man.

After a business is started and is getting along pretty well a number of little things will occur which a man does not like. For instance, about 9 o'clock in the morning, and later, when customers begin to come in, two or three growers will appear; yes, I have seen five or six at one time, each man having a three or four foot basket or box, or perhaps two or three of them; these he places on the counter or on the stools in front until a man can hardly see his customers, so he has to worry along with these men and get them out of the way as best he can. About 11 or 12 o'clock along come a lot of plant men; they are usually well dressed and have a cigar in full blast; they also monopolize the stools; it often happens that three or more get into an argument about the best way to do this, or to grow that, or what is the best way to keep up prices, etc., pulling away at their cigars in the meantime, regardless of the customers who drop in from time to time; finally getting hungry they go out, much to the storekeeper's relief, and for the balance of the day things move along very well.

I find quite a number of storekeepers who in order to get a little business for themselves quote prices on this or that flower at cost, or a very little above. This I am unalterably opposed to. Every flower sold should bring a fair profit. Persons who buy roses for $1.50 a dozen in one store and find as good in another place of business quoted at $1 can not help but think that they have been cheated, and the first dealer loses a customer without any real fault of his own, besides it demoralizes the business.

There are a few rules that should be enforced in every establishment. In the first place the store should be opened every week day in the morning not later than 7:30. Many an early order is lost by neglecting this rule. All flowers should be sorted over first thing, all jars cleaned and filled with fresh water, so as to be ready for a new stock soon as it comes in.

The show must now be displayed, if the weather will permit, and the window fixed in artistic style. Always have violets, pansies, etc. on the counter, as people often buy because they are attracted by their beauty and fragrance, and if you happen to have anything particularly fine always call the attention of the customer to it; sales are often made in this way.

Finally, treat everybody who comes in the same as if they were the best customer that you have, and you will make trade in that way; although it is pretty hard to carry this rule out, for we meet with pretty hard cases sometimes, but patience and a desire to please will win in the long run and lay the foundation for a prosperous business.

Bedding and Vase Plants.

Last Saturday the writer looked through the greenhouses of Mr. J. T. Anthony, Chicago, who conducts a general business, covering pretty well all branches. In the absence of Mr. Anthony his foreman, Mr. W. Viberts, made the following observations upon the condition of trade and the usefulness and popularity of the various classes of plants grown here.

In vines for vases he uses vincas, glechomas (Nepeta glechoma variegata), English ivies, cobæas, thunbergias, maurandyas, nasturtiums and ivy geraniums. He used to use Kenilworth ivy considerably, but will not grow it any more as the stems near the roots are soon bare and unsightly.

A plant that he uses very freely in vases and boxes is Nierembergia gracilis. He also uses Lantana Smithii freely and finds it takes with the people. The other plants used are mainly geraniums.

He has noticed this year a very large demand for vases filled entirely with geraniums of one variety. Sometimes with a border of ivy leaved geraniums to droop over the edges and sometimes with a border of silver leaved ones. Where all scarlet blooming varieties are used the old Mountain of Snow is used for a border, and where pink sorts are used the border is of geranium Mrs. Parker, whose foliage is almost identical with that of Mt. of Snow, but which has handsome double pink flowers. He is much impressed with the value of Mrs. Parker, the flower is so much superior to that of other geraniums with variegated foliage.

His standby among scarlet geraniums is Gen. Sheridan. In color it is much like Gen. Grant but in habit of growth it is more dwarf and compact. In single whites he swears by Queen of the Belgians and has as yet found nothing in this class to equal it.

He has noted quite an increase in the popularity of the petunia since they began to offer plants of really good sorts. And for a cheap flower plants from a good strain of seed are always exceedingly useful to satisfy a certain line of customers. People that want a brilliant effect for a moderate outlay are nearly always satisfied with a good strain of single petunias, and he has filled vases entirely with these plants too. Feverfew is still called for, but it has waned considerably in popularity. He has had hardly any demand for stocks this year, and has had the same experience with the once popular calendulas. He also noted a falling off in the call for Centaurea gymnocarpa and for verbenas too. Those that still ask for verbenas want first-class plants only and the little weaklings that used to sell readily at a low rate are no longer wanted at any price. The call for pansies is as brisk as ever. But not so many were used in vases this year as usual owing to the miserable spring.

In the garden was noted a lot of hardy pyrethrums. The flowers were very double and they are found very useful for summer flowers. Many customers could not be convinced that they were not asters. Two of the best sorts were Purity, white, and Mons. Barral, pink. They bloom freely all summer long and come in very handy for design work.

Another plant grown for summer bloom is Gaillardia pictum. This is found very useful in meeting a certain demand for a big bunch of bloom at a moderate price during the summer.

A big bed of gladiolus planted six weeks ago were showing the leaf blades about six inches above the surface of the ground, and beside it was another bed just planted to provide for a succession crop of summer bloom.

A few years ago they had a big call for the old fashioned garden pink. They laid in a big stock but it don't go now so fast as it did though there is still a generous demand. A batch of armeria (sea pink) made a pretty show and seemed to take the popular fancy, but the flowers spoil badly from heavy rain.

Have we got Dracæna indivisa or something else, is a question that is bothering Mr. Viberts. A big frame is filled with the plants, but they look almost like bunches of grass instead of getting up in the world on a respectable length of stem as D. indivisa should do.

Another problem with him is the way the asters act. After they attain to a certain state of development they are attacked by a canker on the stem and in a single day they are done for. He can discover no evidence of the presence of insects. Some gardeners tell him that something is the matter with the soil but he questions whether this is correct.

In one of the greenhouses was a bench of Lilium auratum, some of the plants already in bloom and the others coming along in succession.

He is very much pleased with the rose Clotilde Soupert as a pot plant for spring sales. He believes it will take high rank above all other light colored roses for this purpose. Nice plants in 4-inch pots retail quickly at 50 cents each. In pink pot roses for spring sales the old Hermosa still holds its own. Plants in 4-inch pots retail at from 35 cents to 50 cents each.

Notes From a Local Florist.

Though we are often dazzled by the success of big firms or great specialists there is no question that many a good livelihood is earned by the small dealers, where trade runs all the way from cabbage plants to decorative palms. Indeed, a man of small capital will find his safest and most remunerative investment in this line of trade, provided of course, that he knows both his business and his market. The locality should be one in which the people are sufficiently well to-do to buy plants, and the stock be chosen with an eye to their needs. A district where there are small towns and suburban residences usually offers a good field for a general trade, and where the roads are good it is no disadvantage if the place is a mile or two from town; people like the jaunt, when there is an attractive place at the end of it. The question of attractiveness cannot be too strongly urged; any local dealer will agree that this has a powerful influence on intending purchasers. Well kept walks and handsome bedding, even of the most moderate dimensions, usually make people want to go and do likewise.

A dealer who has been trying this plan says his next innovation will be a lily tank on a large front lawn, where it will hold a prominent position. It will be built of brick, cemented, after a style shown in the FLORIST, I think last year, and will be filled with Egyptian lotus. It will prove a drawing attraction in a district where the lotus is unknown, and do a good deal of advertising for the greenhouses.

Another attraction which has proved very satisfactory, is a large rose garden; it is a mass of bloom in mid-June, and people come miles to see it. Many amateurs are quite unfamiliar with the fine garden hybrids, and this show gives new ideas as to what a rose should be. It gives a chance, too, to show off Rosa rugosa, a most ornamental shrub for forming a clump, but very little known in most places.

In autumn the best bit of advertising is a little chrysanthemum show, perhaps a single house, arranged specially for inspection. In such a trade as this, apart from flowers for cutting, the best paying chrysanthemums are small and shapely plants in 6-inch pots, and the varieties should be chosen with this object in view. A few specimen plants may be grown; they will be found handy for decorating, but these handsome little plants brighten up a room, and can be sold for a moderate price, so they are popular. Though both pink and yellow chrysanthemums sell well Ivory has proved one of the most popular for this use; its habit is the very ideal for a pot plant, and its bloom is both handome and abundant. A little paragraph in the local papers calls attention to the nurseryman's rose or chrysanthemum show; of course if he is a prudent man he has a standing adv. all the year round, and the local editor is ready enough to give him a paragraph on these occasions.

The retail palm trade is much larger than it was; kentias, latanias and arecas are good stock for a local dealer. It is no trouble to put a bit of lycopodium on the top of the pot—it soon covers it over, and it is worth while; not only is it a great convenience when the plants are used in decorating, but women always want the moss covered pot when buying a palm.

Speaking of decorating, a place of this class is likely to be called on for all sorts of cut flower work and it pays to understand it. Many local florists in the vicinity of large cities do not make up their cut flower orders, but send into the city for them. This plan has a good many disadvantages, apart from the inconvenience, and we generally find that when the local florist understands this branch of his work, and keeps in touch with floral fashions his customers are rather proud of him as a local institution, and show their appreciation in the form of orders. There is a good deal of funeral work in small towns, and this certainly pays well when the flowers are grown on the place. In a local trade we find that among large designs the pillow out-sells everything else, while the leading favorite in inexpensive shapes is the wreath, broken or entire.

A trade of this class must go in largely for bedding plants, since a large proportion of its revenue comes from that source.

JAPANESE GARDENING. PLATE VI. DAINICHIDO GARDEN, NIKKO.

Taste in such plants seems to run in streaks; one season a certain plant will be called for continually, while the next it may be totally neglected. This season a good many in the trade report an amazing run on heliotrope; this is always a favorite plant, but it seems as if people could never get enough of it. Another very salable thing was Begonia rubra; people like it in baskets or veranda boxes, and as it is always in flower it takes well. Another thing people often ask for—and very rarely obtain—is a hardy fragrant violet.

Our local florist says that it pays to force a lot of hyacinths, tulips and narcissus in pots for the early spring trade; they are readily disposed of, especially around Easter. The hyacinths are planted singly—the other bulbs several in a pot. He does not find it worth while to plant them in flats; single pots sell better in this class of trade. Naturally a good many lilies are used; it would be hard nowadays to find a locality where the Easter lily was unknown.

Though a retailer in the class of trade here outlined will find it necessary to have a few adiantums or pteris, as a whole he will find little call for ferns—it is one of the very few plant families he is not expected to grow extensively. The class of customers he depends on are much more likely to go in for wild plants, if they seek to establish a fernery, and space will be found too valuable to waste on sluggish stock. The returns from such trade depends so entirely on business views both of income and expenses that one can hardly afford to carry anything that does not absolutely pay.

EMILY LOUISE TAPLIN.

Hot Water as an Insecticide.

The simplest things of life are often the least known and understood. Who has not seen the time when the knowledge of some simple little antidote was of more worth than a skillful physician when he came.

The subject before us is upon one of these simple things. Water is so common and its use so little thought about, that we are not apt to stop and consider its value as an insect remedy, although it is a most valuable one. It is always at one's command, costs nothing, and with a few moments heating is ready for application. It leaves no bad effect upon the plant, if not raised to too high a temperature, and none need fear poisoning by consuming the treated plants.

An insect is unable to endure as great heat as a plant. From 130° to 135° Fahr. is sure death to most insects, while few plants are harmed by water at 150°, the scalding point. Even the coleus, one of the most delicate of plants, is not injured by water at 150°. This gives a range of at least 20° between the killing power upon insects and plants. On hardier plants the range is still greater. By practical test I know that water at 180° will not injure cabbages, and presume the temperature might still be raised with impunity.

While not so valuable in treating large areas, on account of the difficulty of maintaining the proper temperature while being carried to a distance, this hot-water remedy should be very useful to florists whose plants are usually in the greenhouse or in the grounds close by.

By occasionally placing a thermometer in the heating water, the desired temperature can be very easily obtained. It should be raised somewhat above the desired point if likely to cool much through transferring or through carrying quite a distance. Water cools quickly — much faster in tin than in wood—and should be applied as rapidly as possible when ready. The application may be made by means of a cup or through a sprinkler, with the cap removed, or a spray pump without a nozzle, or in any manner that may seem most convenient. The water can not be thrown in a spray, but must be thrown in a solid stream, else it will lose its temperature to such an extent as to become ineffectual. If much hose is used the decrease in temperature, by its passage through the hose, must be considered.

The farmer with his little patch of cabbages in the garden finds there is nothing equal to hot water for the destruction of the green cabbage caterpillar. Our long-legged, hard-shelled, ever-hungry rose chafer is another insect quite sus-

ceptible to hot water. The poisons that we usually expect to kill such insects are ineffectual here.

We found last year in our experiments that kerosene emulsion, when well applied, would kill the most of the "chafers," and that pyrethro-kerosene emulsion was still more effectual. When hot water at a temperature of from 130 to 140 degrees was poured onto them, they yielded to the inevitable without a struggle. For field use one of the forms of kerosene emulsion seems to be the more desirable, but for use in a small way hot water is the remedy.

This same hydropathic treatment is the best remedy I know of for the mealy bug. Although our florist has not had the opportunity to use this remedy on an extensive scale, yet it has been used enough to know that it is a practical remedy. When water at 135° strikes the mealy bug, it loses its white coat and its life at once. We have tried many remedies, but none seem as promising as this.

Plant lice or "green fly," quickly succumb under its influence. Kerosene emulsion is probably the best all around remedy for these pests, but some of the most delicate of plants, like those of the coleus, can not endure the use of the emulsion at its proper strength. Should plant lice attack any such plants, in all probability hot water can be made an effectual remedy.

There is often considerable trouble with insects that work under ground on the roots of plants. Many such pests can be treated as well with hot water in their subterranean retreat as above. For such work the water should be almost at the boiling point before applying and then soak the soil thoroughly with it.

To dilate more upon details seems hardly necessary. Do not let so simple a remedy pass without at least a trial.

Agrl. College, Mich. G. C. DAVIS.

The New Enemy.

Mr. W. R. Shelmire, Avondale, Pa., has received the following letter from Prof. C. V. Riley, Government Entomologist, regarding the worm figured on page 1008 of our issue for June 9:

"The insect damaging carnations is the common stalk borer (Gortyna nitela). This insect affects the stalks of tomatoes, potatoes, corn and a number of other plants. It is not surprising to hear of it in carnations, although I do not recollect that my attention has been called to a precisely similar occurrence. The only remedy which I can suggest is to destroy by hand all larvæ when they are detected from the effects of their work. They are not strictly measuring worms (family Geometridæ), but are more closely allied to the cut worms (family Noctuidæ), although they have a looping habit when young."

DO YOU WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

Medinilla Magnifica.

This somewhat old but magnificent stove plant is very seldom seen, but when grown into a specimen of size is certainly one of the most attractive plants we have. Its leaves, of a rich glossy green, and from eight to ten inches long, make it very effective when not in flower. The long terminal racemes of flowers, of a beautiful rosy pink shade of color, lasts a long time in perfection—from April until July.

The plant or "tree" here represented is now nearly twenty years old, and during that period has always produced a certain quantity of bloom, but every alternate year a profusion, proving a season of rest is of importance.

After blooming I usually place it in a partially shaded location out doors and out of the way of sudden blasts of wind; otherwise its beautiful foliage is liable to get riddled. When September arrives it is then replaced in the stove where a temperature of 55° can be obtained during night. When in vigorous growth it delights in plenty of weak liquid cow manure and guano alternately. It is very subject to mealy bug (the curse of gardeners) and requires constant attention, otherwise it will be almost impossible to eradicate the pest after the racemes begin to form.

F. L. HARRIS.

Gardener to H. H. Hunnewell, Wellesley, Mass.

Boston.

Cut flower trade is unusually dull. The school graduations do not seem to have their customary effect upon the demand. The only scarce commodity is white or yellow roses. Of these there are not quite enough to go round and the price obtained for good quality Brides and Perles ought to be very gratifving to the growers who are fortunate enough to have a supply.

Other roses are in over-stock and cheap. Out door roses are in but the quality is rank. Judging from the stuff that has been brought in so far, the rose show next week will not amount to much. Something, possibly the cold winds of March and April, has badly affected all the hardy roses and they are in many cases killed outright.

Carnations never were so abundant. As to quality they are all right, but the quantity coming in is far ahead of the outlet. This is especially true of all the colored varieties.

All the florists, retail and wholesale, seem well satisfied with the season's work. The plant men too, say they have no fault to find with the prices obtained at auction or otherwise. Notwithstanding the very general abandonment of the showy foliage and ribbon bed style of gardening by the best places, yet geraniums, coleuses and similar stock have sold at figures that compare favorably with any past season.

The pink pond lily is in the market in quantity and the demand for it appears to be greater than ever. Peck & Sutherland control the principal stock of it for this city.

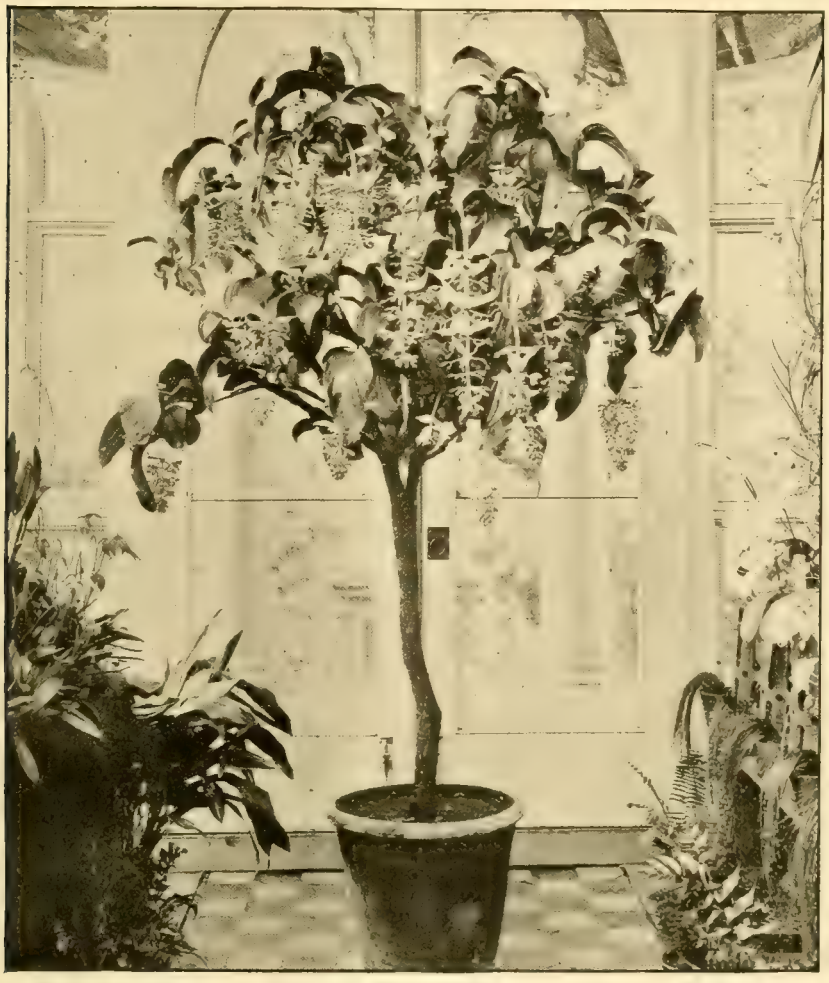
The annual visit of the Garden Committee of the Mass. Horticultural Society to Oakmont, the beautiful estate of Mr. Francis Brown Hayes at Lexington, took place on Monday June 13. Accompanying the Garden Committee were the officers and other prominent members of the Society to the number of forty or fifty. On arriving at the grounds the party was conducted to a lunch which was served in a tent handsomely decorated with azaleas, where they were received by Mr. Hayes in a few well chosen words of welcome after which proper attention was given to the comforts spread out on the tables.

The great rhododendron tent was next visited and an hour spent in admiring the magnificent display of these popular flowers. They were just at their best and Mr. Comley has good cause for pride in their appearance this year. Such a mass of vigorous, finely bloomed plants is not to be seen elsewhere in this country. The location is peculiarly adapted to their successful cultivation, it being so irrigated that the ground is constantly moist and the soil just suits the rhododendron.

As an exhibition flower the rhododendron seems to have completely outstripped the rose, its drawing power with the public exceeding by far the old combination of the rose and strawberry.

The Arnold Arboretum is well worthy of a visit now. At present the roses are the great center of interest and it is a rare treat to hear Mr. Dawson talk about them. Some of his crosses are likely to prove valuable, especially those in the multiflora line. The hardy azaleas and philadelphuses have been at their best during the past week. Among the robinias, one called Neo-Mexicana is now in bloom, probably for the first time in the northern U. S.

Among the recent visitors to the Arboretum was Mr. Wm. Falconer of Glen Cove, N. Y. whose intense interest in this class of plants kept him there constantly for two or three days, so that he was prevented from calling on any of his old friends.



Mr. C. B. Weathered of N. Y. has been spending a week at Boston and Newport, and the always welcome Mr. Hugh Dickson of Belfast, Ireland, is now on the ground and attending strictly to business.

New York.

Flowers are still coming in in great quantity, though trade continues extremely quiet. As might be expected, roses are as a rule soft and poor, but of the Beauty some fairly good ones are being received, considering the time of year. Although the principal crop of out-door roses is off, yet the Jacq. is still coming in plentifully, and where the blooms are good and clean they bring as high as $3 per hundred. On the other hand if they are poor stock $3 per hundred is hard to obtain. Mermets are in the worst condition as to color. Some of the growers continue to send them in, however, packed as carefully as in winter although their time is plainly lost and the immediate destination of the roses must be the dirt barrel.

The quantity of carnations coming to the wholesalers and the market is unprecedented. Nothing like it was ever seen before, and although the quality is fine and many of them have grand stems 18 to 24 inches long, yet the great bulk of them are at present unsold. The Greeks even refuse to make an offer for them. On the streets are to be seen a great many magnolia blooms, which are brought in fairly good condition from the South and which seem to be popular for the moment.

It is surprising to see the quantity of herbaceous flowers in the stores; they make a fine show in the windows. Quantities of purple fox-gloves (Digitalis) were noted in one window—a very showy thing—and there is an infinite variety of spiræa, some of it very dainty. Pæonies are begining to die off now, but they have

MEDINILLA MAGNIFICA.

been very abundant and good. Although this herbaceous stuff can hardly be considered a factor in the flower market it certainly comes in well for window dressing, and that at a time when the weather makes such arrangement a trying matter. Gaillardia is to be seen plentifully—showy and popular.

Ernst Asmus is cutting fine lily of the valley; this is one of his specialities, and he is able to supply flowers when every one else is out of the running. Mr. Asmus sends in a large quantity of roses also.

Hodgson has opened his Newport establishment for the season. He has had a very busy spring in New York, doing a good deal of fine funeral work. An exquisite arrangement for a young woman was a floral casket, and was made of pink and white sweet peas, relieved by adiantum. A variation from this beautiful arrangement was a casket having the lid entirely covered with white roses, while the sides were draped with rose garlands. Mr. Hodgson prefers white or very pale tinted flowers for funeral work. One of his arrangements on a funeral occasion is to cover one wall in the room entirely with white roses, the decoration being confined to that space.

Though most of the season's weddings have been extremely simple in floral decorations a striking exception was the Dinsmore wedding, up the Hudson, which was arranged by Hodgson. The florist was given carte blanche in carrying out his ideas and it is said to have been the most elaborate and costly decoration of the year.

Stumpp is displaying some very fine fancy caladiums.

Scallen shows a lot of good palms, which make a fine appearance in the store.

Siebrecht & Wadley have a lot of good Cattleya Mossiæ in bloom, among them some fine varieties.

One of the decorative art stores was having a run last week on Tillandsia bracteata, which was disposed in various jars or baskets with quite an æsthetic effect. It was correctly labelled and correctly described as an air plant, being one of the epiphytal tillandsias from the West Indies. Whether it really would flower and flourish hung up in a room and fed on an occasional glass of water is a matter of great doubt.

G T. Cottam reports using a good many crotons in his landscape work this season; the plants are hardened off a little in a cool place before planting, and they then stay in perfect condition.

Aug. Rolker & Sons have a suit in progress regarding the duty on imported wheat, they claiming that the wheat should be classed as dried flowers, the duty on which is 20%, and not as straw with a duty of 30%, as has been the decision of the collector.

Wm. E. Nolan, the manufacturer of greenhouse heating apparatus, has won a suit against Frank Maukin, of Brooklyn. Maukin had refused to pay a balance of $300 on a heating contract, claiming that the heat was insufficient and that he had lost a crop of 10,000 roses in consequence. The verdict was for $200.

Ernst Asmus and J. N. May have just returned from the Megantic game preserves where they have been seeking the festive trout. Their faces bear witness to the fact that whatever their luck with the festive trout there is no doubt as to their success with the festive mosquito and black fly. But these disfigurements do not confine themselves to those who go to the woods. Some of the stay-at-homes get their share of trials, as witness Robt. B. Young who has been nursing a beautiful specimen boil on his cheek for the past fortnight and has been threatening to lose his temper in consequence.

A number of the Nyack greenhouses were damaged by hail during the severe storm of June 17.

Alfred Dimmock sailed for the other side on the Etruria on June 18.

J. A. Penman expects to follow him on the City of Paris on the 29th inst.

At the meeting of the Florists Club on Tuesday, June 14, Messrs May, Burns and Taylor were appointed a committee on transportation and hotel, for the Washington convention.

Washington.

Hon. J. R. McLean, of the Cincinnati *Enquirer*, has been unusually kind in offering his park, in this city, corner Florida avenue and 20th street, for the purpose of a reception to the S. A. F., that they may become more intimately acquainted, an excellent thing for us to do. Hope all will attend the reception. Mr. McLean proposes to give us a lunch and will have the famous U. S. Marine Band, that all may have an opportunity to listen to their wonderful rendition.

In an interview with Hon. W. H. Hatch, chairman committee on agriculture, to which committee was referred the application for the national charter for the S. A. F. I am informed that as soon as his committee can get a day in the house under the suspension of the rules, our charter will be one of the very first called from the calendar, and he has not the slightest doubt of its passing. It has passed the Senate. Mr. Hatch says we will have a charter in the very near future. I hope to see it before the convention.

The bill providing for the erection of a building for a flower market, in this city, was called up by Senator Wolcott, June 1, and after a lengthy explanation by the senator, he succeeded in getting it passed by a vote of 35 to 12. Senators Vest, Voorhees, Cockrell, Hawley and a few others opposed its passage on the ground that it was to be erected on a public reservation, at the south-west corner of Penna. avenue and 9th street. The bill carries with it an appropriation of $30,000, one-half of this to be paid from the District revenues, the other from the general treasury. It is to be constructed of iron and glass. This measure has the support and sympathy of a number of the ladies high in social circles. I don't think it will ever become a law. Certainly not at this session of Congress. They can't get it through the House.

C. LESLIE REYNOLDS.

Class designs for commencements must be large, showy and — cheap. Usually they are made up of vari-colored immortelles and Cape flowers, bordered with laurel or ivy, and consist of huge shields, five or six feet high, great placques, or immense streamers extending nearly across a whole stage front—each with appropriate lettering.

Smalls presented something of a deviation the other day in a well-proportioned scroll eight feet high, resting upon a

slanting pedestal, the body made up entirely of ox-eye daisies (of which it required something like eight thousand or more) with the class motto in purple immortelles on the face, the whole presenting a fine effect at a distance.

At Strauss' store I noticed recently another floral ship, some nine feet or more in length and of good design, made up of Cape flowers and immortelles, lettered on the side "El Norte," intended for some launching ceremony.

In the markets flowers are a drug now, roses selling at times as low as $1 per hundred. But really choice material is by no means over-abundant. Z.

Philadelphia.

Brother Watson takes quite an interest in the boys, and is very observing. One day recently he said, "Have you noticed the lofty air with which our friend D. D. L. F. walks up and down Broad street of late?" "Yes, I have, but could not account for it." "Well I think I have discovered the reason of it. You know the new set of the Encyclopædia Brittanica the P. H. S. Library has just got?" "Yes." "Well there are only twenty-nine volumes of it; but his lordship has been submitting himself to the study of it with such application, that he has already got the most of it absorbed into his inner consciousness, with the inevitable result of widening his vision to such an extent that he can hardly stop to speak to any of his erstwhile associates, when he meets them on the street. You boys are not it with him now, I really wonder how he can have anything to do with you whatever."

"Have you heard of Davy Bearn's latest wrinkle? Davy has a field of carnations out there at Bala, and there was trouble about a rabbit that made fraternal visits to the carnations, but not having proper 19th century methods of treating the divine flower, Br'er Rabbit played 'hob' with the proper development of the young plants and there has been trouble. In this emergency, Davy, with his usual acumen, soon found a remedy. He went to work on that rabbit and gave him lessons in deportment, and made him do prestidigatator tricks, and showed him things that he never dreamed of before. Bye and bye he got him to be so expert that he could nip off the proper shoots on those carnations, thereby saving his teacher a vast amount of labor, besides giving himself unrestrained liberty in a most delectable field. So you see there is something in being a philosopher after all. At last accounts Mr. Rabbit was living like a fighting cock at his own expense, and proving himself a gold mine to his employer."

Something up! President Dean, Vice-President Smith, Secretary Stewart and Mr. Hale of Washington are all in town, and holding whispered conversations and looking wise. Secretary Stewart bore a bronzy appearance having just returned from a fishing excursion up in Maine and reports having had great luck. The growers are all very busy now getting their rose houses fixed up and planted for next season.

Harry Michell, the seedsman, reports having had a very good spring. He intends altering the interior of his store in order to gain considerable room. He is a hard worker and deserves to be successful.

Prices of cut flowers do not hold from one day to another at this season. The stock is so poor and the demand so light, that the grower offers his stock at almost any price to effect a sale, and has a bundle or two of some kind of weeds to throw in gratis.

Mr. Lonsdale has some good Brunners from out-side which bring $1.50 a dozen. K.

Montreal.

Planting out is about finished now. Reports so far would indicate about an average season. Very little stuff left over.

The club meeting last Tuesday night was not largely attended, lots of the members not having finished planting out. It was decided to award the prizes at the chrysanthemum show on the point system so all exhibitors will get something. W. Ward read a paper on the gloxinia which brought out considerable discussion. The apple men around here are in a great stew because the Horticultural Society is run by a board of gardeners. They are trying to form another society composed of fruit-growers only, which is a very sensible thing for them to do.

Business has been fairly lively this week owing to weddings. Roses are scarce and of poor quality. At one fashionable wedding the bride carried three dozen Bride roses tied with white ribbon, her dress being all white, while the bridesmaids (4) were dressed in white, with green ribbons and each carried a large bunch of snowballs tied with green ribbons.

Doyle is going to knock the spots off us all this year with his roses. Bland's mums are not very good (so he says), but J. B. will probably get "near it" next November. Walt Wilshire is getting around again. The weather lately has been most favorable for crops. J. B.

Buffalo.

For filling boxes, florists here get 75 cents to $1.00 per foot, according to the breadth of the boxes and the quality of the stuff used. Grevillea robusta is used quite extensively this year, and for the center it is scarcely equaled; light and pretty it stands all weathers. Tuberous begonias also play an important part and are used very largely.

William Scott is building an eight-thousand-dollar residence (a good sign of the times). He will also pull down three of his old greenhouses and rebuild an additional 2000 square feet, for palms and general plants.

Chris Christensen will erect a 100-foot violet house this summer, "the last I can get on an acre of ground," says he.

S. Pickleman, Jr. is scouring the country for a ten-acre lot to build a new establishment for his increasing business. It is likely he will settle in West Seneca, N. Y.

J. H. Rebstock is talking of moving his "city plant" to his country place.

W. J. Palmer will erect two new houses, each 150 x 20, exclusively for growing "mums." B.

Toronto.

Gardens public and private look like gardens now and are gay with flower and foliage beds. The weather has been very hot the last week and bedding stuff has had every chance to grow that could be wished for.

The plant trade lasted just about two weeks but those two weeks were "snorters"; the weather before having been cool people put off planting and then all wanted to be served at once. Retail prices were about the same as last year—some things a little lower perhaps—but the wholesale men are in the blues and say they have made nothing; some prices I heard quoted were certainly "waydown" below the the cost line.

Large quantities of roses are still selling on the market and the stores have had to follow suit with regards to prices and I have noticed several cards in the windows "Your choice 50 cents a dozen". Of course at this price they sell like hot cakes. E.

Baltimore.

At the club meeting Monday night the general desire seemed to be to get through with what little business there was and get out in the open air again. All hands were hot, but the fat men fairly sweltered, and, as our worthy president is getting dangerously near that category, and there are some more pronounced cases than he, a motion to adjourn was hailed with evident relief and ended the shortest meeting of the year.

A visit to Mr. H. A. Parr's place, which is presided over horticulturally by our librarian Mr. Chas. M. Wagner, showed some chrysanthemum plants well advanced in growth and looking very strong. Mr. Wagner says he can not keep Jno. Firth from blooming; it seems an everbloomer with him, for it had a fine flower nearly open and has produced equally fine ones during the spring. There were many other things worth a mention, particularly the orchids, among which were fine specimens of Lælia purpurata and Cypripedium barbatum superbum in bloom; and the grapes which were fine; but the chrysanthemums were ahead of all and showed evidence of most careful cultivation.

The excessive heat, above 90° almost every day, is driving society out of town entirely, almost the only event of importance being a wedding which was decorated by Brackenridge & Co. MACK.

A Bowling Match.

A delegation from the Washington and Philadelphia Florists' Clubs visited Baltimore Thursday afternoon, June 16, and together with the bowlers of the Baltimore Florists' Club engaged in a match game of ten pins. For a trophy each club put up one regulation ten pin ball, the winner to take all three.

The conditions of the match were that each club was to roll three games, each game on a separate pair of alleys, and the club having the highest total score to be declared the winner. It was also understood that each club was to bear equally the expense of the alleys, but when the match was over the big hearted Baltimoreans wouldn't have it that way, and insisted that they never agreed to any such arrangement and the other clubs had to submit.

The match took place at the Monumental Bowling Alleys. There is probably no better place for a match of this kind; the building is large and roomy and contains four pairs of alleys. There are two immense fans the length of the building which during the game kept up a refreshing breeze and made the place much cooler.

When the Philadelphia contingent arrived they found the Washington boys hard at it; they were very sorry to find Mr. Freeman, their chief, was not with them, he being detained on account of

business and sickness in his family. While waiting for the local players to arrive the "Senators" and the "Phillies" engaged in a social preliminary bout, in which the Phillies got a little the best of it, although the Senators showed up well and the Phillies saw they would have to "play ball" to win.

The first game of the match was now commenced although Baltimore had to put in some substitute players, their full team not having arrived. The toe line was placed at 57 feet from head pin. This did not give much room to run (about 7½ feet); the space in front was about eight inches below the level of the alleys and a player who likes a run is placed at somewhat of a disadvantage.

The first game was Phila.'s from start to finish, they coming out ahead with a lead of 128 pins over Washington, who beat Baltimore by 198 pins. Brown of Phila. was top man with 204, Kift second with 175 and King of Washington tied with Longinette for third place with 173.

Washington said, "that's a big lead but there's two more games," and the Baltimores said they were going to do better, and they did, for in the second game they made 911, 209 more than their first, while Washington lost 71 pins, making 829. Phila. gained 34, making 1062; they had also the three highest scores, Kift 213, Westcott 186 and Brown 181.

The Baltimore men were very much encouraged with their great gain and determined in the last game to beat Washington out sure and get second place, but they fell off while their opponents gained considerably. The score for this game was Phila. 994, Washington 972, Baltimore 845. Westcott was first with 198, King second 190, and Brown third 175.

SCORES.

	1st.	2nd.	3d.	Total
Phila.	1028	1062	994	3084
Wash.	900	829	972	2701
Balti.	702	911	845	2458

Phila. beats Washington 383, Washington beats Baltimore 243. Scorers: W. K. Harris for Washington, J. Clark for Baltimore, W. Gude for Phila.

As it was still early Baltimore and Washington proposed another match for a trophy of two regulation balls, conditions same as first contest. This proved to be a "Battle Royal" between Washington and Philadelphia. The Senators started off in great shape as though they were going to land this prize sure and the Phillies got a trifle "rattled," but after the fifth frame they braced up and following Brown, who got above the double century for the second time, they pulled out ahead by 42 pins, Baltimore following Washington, 216 pins behind.

The score: Phila. 996, Wash. 954, Balto. 738. Brown with 205, Kift 179 and Heron 175 were first, second and third in this game.

Phila. thought that one game was to decide this match and Longinette supposing his side to have won let himself loose in celebrating the victory, and it took the united efforts of Messrs. Westcott and Harris to repress his enthusiasm. It really seemed as if he was trying to let the boys at home hear the good news. However, when they found there was still another game to roll they pitched in at once as it would soon be train time. The boys were all getting pretty tired and it began to show in their scores. It looked at one time as if Washington was going to capture the prize, but that little "brace" was taken on again and thanks to Longinette who had got his second wind and was rolling in great shape, the Phila. boys won the second match with 24 pins to spare.

Score: Phila. 942, Wash. 954, Balto. ——. In this game Longinette was first with 201, Oliver second with 168, Brunger third with 167. Total both games second match Phila. 1938, Washington 1914, Baltimore ——. This was without Baltimore's last score, which we neglected to get being in such a hurry to make the train. It must have been a good one judging from their enthusiastic shouting; they had strengthened their team for the last game, trotted out their Buffalo Bill to shout for them and were "right in it."

Just before the games were finished Mr. Hale, of Washington, brought Mr. Smith, from the Botanic Gardens, to the scene; he was received with applause and handshaking all round.

At the conclusion of the match hearty cheers were given for Baltimore, Washington and Philadelphia in turn. Mr. Westcott mounted a bench and thanked the Baltimoreans on behalf of the Philadelphia club for their elegant reception and generous treatment and said he hoped to get a chance back at them in the near future. He gave any or all of them an invitation to visit the Phila. club and assured them they would be well treated.

The local club seemed unable to do enough for their visitors. In fact we feel sure their scores would have been much better had they not paid so much attention to looking after the comfort of others.

It was a visit that will long be remembered with pleasure by those present, and the Phila. boys will have a constant reminder in the new balls, with which they expect to get in great shape for the tournament during the convention. K.

THE SCORE.

Philadelphia.				2nd match.	
Kift	175	213	173	179	161
Heron	147	176	129	175	139

IF YOU have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

Notes from the Arnold Arboretum.

A man nowadays must not stay home all the time and rust; it will benefit both his mind and body to get out and see what other folks are doing. And this is why I paid a flying visit to the Hub and to the Arboretum, the Mecca of every tree man. Jackson Dawson may be a big man and a fat one, but the way he can tear along through mud and mire, over hill and dale and rocky brae would make Rowell himself pant and perspire, let alone a poor mosquito-eaten body from Long Island. But the pleasures of the head have little thought for the fatigue of the body, and as humming birds flit from bloom to bloom to sip the nectar of the flowers, so we sped from tree to tree and shrub to shrub to note, compare, admire, and, in my case, with covetous propensities, often wish I had another of the same at home.

To Mr. Dawson I tender my sincere thanks for his kind attention to me, and to Mrs. Dawson for her warm hospitality.

"PRUNUS SIMONI is one of the meanest things that have ever been put into existence, it is neither good for one thing nor for another." So said Jackson Dawson.

PRUNUS MAHALEB PENDULA makes a very pretty weeper if worked at the ground and trained straight up.

PRUNUS GRAYANA from Japan, is one of the earliest to bloom of the Padus group. Of course it was long past blooming when I saw it, but I couldn't help thinking how much it resembled Maackii.

SPIRÆA CHAMÆDRIFOLIA was in good bloom, also several other very distinct forms of it, one called flexuosa being quite marked.

SPIRÆA CANA was past. A variety of it called savranica, with smaller foliage than the type, had still a good many blooms upon it.

SPIRÆA JAPONICA VAR INDICA was full of small corymbs of white flowers. It is a very pretty and worthy shrub, and not much like Japonica generally, besides its earliness to bloom is remarkable.

SPIRÆA PUBESCENS from the mountains of Pekin is considered one of the best of the early blooming species.

SPIRÆA TOBOLKSII is in general appearance very much like S. sorbifolia, but it is two weeks later in blooming. Here, as they are grown side by side, the difference is positive.

SPIRÆA OPULIFOLIA NANA is a vast improvement upon the common rank-growing ninebark. It makes a bush of about four feet high, with arching shoots, more densely flowered than the species, and altogether it has a more refined appearance.

SPIRÆA TORREYI belongs to the same section as opulifolia, and is a small, early blooming shrub well worth having.

RUBUS NUTKANA isn't very popular because it isn't very hardy. When it gets hurt in winter it doesn't bloom the next season, but lay down the canes in fall and cover them with some earth as one would raspberry canes, and they winter perfectly and bloom fine the following summer.

POTENTILLA FRUTICOSA FLORIBUNDA is a

form got from a German nursery. It looks to be a better shrub than the type; while it may not be more abundant blooming than the wild plant, its flowers are very much larger and showier and its foliage lustier.

CYDONIA JAPONICA, VARIEGATED. — I noticed two forms: One was of moderately rank growth and had large leaves, the variegated foliage was all pink or all white, or all white and pink, that is, there was no green in them; these colored leaves come out prettily in spring, but soon perish. The thing is no good. The other was a lesser and bushier plant after the fashion of Cydonia Maulei, and its variegation was exceedingly beautiful, and Mr. D. says it keeps well all summer. The leaves are pink, white and green, all prettily mottled or marbled, the white and pink prevailing. But there is green enough in them to keep them healthy.

CYDONIA MAULEI "SUPERIOR" is an unusually fine form of this popular shrub.

AMONG PHILADELPHUSES, P. coronarius var. Schrenkii was noticeable as being the earliest of all. Mr. D. recommends it as a shrub for forcing for Easter or earlier.

HYDRANGEA VESTITA, var. pubescens was a big, bushy plant, 6 or 7 feet high, full of flower buds, and now begining to bloom. It is the earliest of our hardy hydrangeas, comparatively new, and worth having. Mr. D. says he doesn't think the typical vestita has yet been introduced; all our plants are of the variety pubescens.

HYDRANGEA RADIATA, one of our wild species, is worth growing in our shrubberies, and its variety nivea is very much better because of the very much greater whiteness of the under side of its foliage. Not nearly in bloom yet.

RIBES SAXATILE isn't much of a shrub to look at, and its yellowish-green flowers, which are produced in early spring, have nothing to commend them in the way of beauty, but Mr. D. says, "get that and plant it and be good to it, for when it is in bloom we have nothing like it for fragrance, it scents up the atmosphere for rods around."

VIBURNUM CASSINOIDES, the broad-leaved variety of it, from Vermont, is better and more ornamental than the common type. Planted out in the Arboretum it is now everywhere in bloom, and what a showy wild shrub it is too.

VIBURNUM LANTANOIDES, true, was out of bloom. It is a shrub of marked appearance, with large foliage, but I never saw a handsomer specimen plant of it. Why will some of our nurserymen persist in selling V. Lantana for lantanoides? The two shrubs are about as much like one another as are beans and potatoes. Don't take it for granted that your customers are all so ignorant that they don't know the difference between them.

LONICERA CILIATA is one of our early blooming, wild bush honeysuckles, and a poor enough thing too it is when in bloom, but now its beauty is very conspicuous for it is full of bright coral-red fruit that shows up handsomely among the scant foliage. While not desirable for small gardens where deutzias, spiræas and azaleas are better fitted, in parks and large gardens this fly honeysuckle deserves full recognition.

LONICERA TARTARICA NANA "is a real cute little thing" about 2 feet high and full of blossoms.

LONICERA MAXIMOWICZII is a bush honeysuckle now in good bloom; its flowers are reddish purple and in pairs.

LONICERA IBERICA is another bush honeysuckle and the latest of all to bloom, it isn't nearly out yet.

LONICERA QUINQUELOCULARIS is a bush honeysuckle with yellowish-white flowers now opening, and later on it will have white fruit. While these late blooming bush honeysuckles have a certain ornamental value, I would not class them as A 1 shrubs for the nurseryman to handle.

BOX ELDER, VAR. "ARGENTEA MARMORATA" is a variety with white margined leaves, but the variegation is much less pronounced than in the common variegated box elder. This is of much value, because the trouble with the old form was that it had got so very much white in its leaves they always got scalded in summer, often early in June, hence how little it is called for or used. But this new form, Mr. D. assures me, stands the summer perfectly, and its foliage continues untarnished thoughout the hot weather.

WEIGELIA CANDIDISSIMA, Mr. Dawson considers is the best of all the white weigelias, for it is the hardiest. True for the north, but in the south I should say hortensis nivea is the prettiest. When in perfect health and full bloom we have no weigelia to equal this last named variety, but alas, even on Long Island, it does get considerably winter-killed.

ANDROMEDA JAPONICA VARIEGATA.—Mr. D. showed me the variegated-leaved form and insisted that it is hardier than the plain green-leaved one. The same thing is noticeable in the variegated English yews, of which the golden-leaved forms are hardier than the green ones.

HARDY HEATHS.—They have quite a large group of these, and many of them have now become large mats. But Mr. D. is annoyed about them. Last winter the field mice took up their winter quarters in these heather patches and paid for their shelter in the most villanous mischief their little minds and lance-sharp teeth could devise and accomplish. They cut and peeled the heather on every hand, tunnelled hither and thither all around their individual homes, and cut visiting burrows to their neighbors'.

LEIOPHYLLUM BUXIFOLIUM, the sand myrtle from New Jersey, a very neat and pretty little evergreen, was going out of bloom. Does well in cultivation, but too small to handle with profit except as complementary to other stock. The same may be said of Ledum latifolium, which was in bloom. These little shrubs are gems for a rockery, but require special places if to be planted in the open garden. There's no money in them.

PACHYSANDRA PROCUMBENS is a little spreading evergreen plant from Japan, and very desirable on account of adaptability for spreading under the shade of trees after the fashion of pyrolas, wintergreen, and the like. Mr. D. is getting up a big stock of it for this use in the Arboretum. There is also a variegated-leaved form of it in every way as thrifty as the green one.

JASMINUM FRUTICOSUM. — Under this name quite a pretty little shrub with yellow flowers was blooming nicely in a bed. It is protected in winter by bending it down onto the ground and covering it with a few spadefulls of dirt as one would a grape vine or raspberry cane.

CLETHRA TOMENTOSA.—"That clethra there is a southern species, but it seems to be hardy enough here; it is a very beautiful form and blooms later than alnifolia or acuminata," said Mr. Dawson.

CLETHRA BARBINENSIS from Japan "isn't quite hardy here, but if we winter it in a frame and plant it out in summer it will bloom very well." Sorry to hear it isn't quite hardy at Boston for I had been building quite a store upon it; so far it has lived well with us at Dosoris, in a sheltered place, and it blooms nicely in summer.

LIGUSTRUM VULGARE GLAUCUM FOL. ALBO-MARGINALIS! Am not I glad I'm off of that Nomenclature Committee. Such a name for a common privet, with a faintly defined white edging on its leaves! Now that's a nurseryman's name. But there isn't a live nurseryman in this country who doesn't know that a name like that would kill the sale of the finest shrub on earth. Give us every time a happy name to insure a big sale.

VINCA MINOR with double flowers. "That bed of vinca there is of a double blue variety. When in bloom the flowers are as like double blue violets as two peas in one pod; indeed if picked and bunched with violet leaves around them, you'd have to look twice before you could tell they weren't violets." Now florists don't take this hint and adulterate your violets, leave such rascally tricks to the grocer and milkman.

LYCIUM CHINENSE.—"Say what you will, Lycium Chinense has far larger fruit than Lycium vulgare, and its fruit laden vines too, are very much longer and more abundantly berried than those of the common matrimony vine." So said Jackson Dawson.

ARISTOLOCHIA PUBESCENS is coming into flower nicely. This is not common in the northern states.

SMILAX PSEUDO-CHINA.—For vigor and fine foliage this is the handsomest of all the hardy catbriers.

BAMBUSA TESSELLATA may wake up to something good, but so far B. Metake takes the lead in the way of hardy species.

THREE DWARF ELMS appeared to me like sour grapes to the fox. One is umbraculifera which we have got, and the other two are a pigmy from off the Scotch elm and another of the American elm. Where elms thrive these would be desiderata, but on Long Island we have stopped for a time planting any more elms on account of that insurmountable pest the elm-leaf beetle. She has been here already this year. She came in May, ate holes in all the leaves and laid eggs on the under sides, and then went away to die. But in a week or two from now the trouble will begin in earnest, for the eggs will be hatched and millions of larvæ will have to be fed. Antidotes! Yes, lots! But when you take hold of a lot of big elms in an infested district and clean them or keep them clean, please send for me about the middle of July and show me your work, for I am real anxious to see done by others, in fact, what I myself have been absolutely unable to accomplish.

ACER SPICATUM.—I never saw this little mountain maple so pretty before. In the front of the shrubberies it was planted here and there and had formed considerable bushes, and these were now in such full bloom as to demand attention. Of course the individual flowers don't amount to much, it is their vast quantity that rivets the eye.

PRUNUS MUME.—Mr. D. recommends it for forcing.

VIBURNUM CASSINOIDES, VARIEGATED.—In a batch of about five hundred seedlings Mr. D. got a very decidedly variegated-leaved variety.

BERBERIS THUNBERGII, VARIEGATED.—A prettily variegated-leaved variety of this Japanese shrub is also one of the garden novelties at the Arboretum.

A KENTUCKY COFFEE TREE (gymnoclades) FROM CHINA.—Several young plants of it have been raised from seed sent from China. While in its youth it looks much like its American relative, the under side of its leaves have a strong violet-blue shade.

CORNUS BAILEYI.—I came upon a plant of this, so-named, and brought over a piece of it to a batch of seedling stolonifera and asked Mr. D. to show me the difference between them. "Now stop this fooling," he exclaimed, "the weather is too hot and muggy for joking."

ÆTHIONEMA CORDIFOLIA is a little hardy plant now full of rosy lilac flowers. A big mat of it caught my eye. "If you want to succeed in growing that plant well and keeping it over year after year cut it in every year."

HELIANTHEMUMS are a lot of little mat-like wiry plants of a shrubby order that are very beautiful now in open sunny spots. "Keep them also cut in every year" suggested Mr. D. "and never plant them where water can lodge about their roots."

FENDLERA RUPICOLA with long wiry shoots covered with white flowers was quite pretty.

VACCINEUM STAMINEUM is a little wild shrub of the blueberry order and has silvery white flowers in great numbers. They had the finest specimen of it I ever saw and it was very charming indeed. It does very well with us too, but our plants are much smaller. While admitting its exquisite beauty when in its best condition in my opinion it is too slow growing and not loud enough for the popular taste.

A DWARF Leucothœ Catesbæi was markedly different in size from the type, being ever so much smaller.

LESPEDEZA VIRGATA was a little spreading plant from Jesso and shown to me as something quite beautiful, being covered with little purple flowers later on.

LILAC VIRGINITE with double pinky white flowers was the best of its class in bloom; Leon Simon was not so pretty; and azurea plena had mean, little, short tubed double flowers. Most of the other lilacs had gone out of bloom.

BERBERIS VULGARIS VAR. PROVINCIALIS is the best fruiting form. It might be worth while to introduce it as a berry bearing plant.

DWARF RHODODENDRONS as ovatum and ferrugineum were nicely in bloom, so too was R. punctatum. The latter isn't iron clad.

NAMED RHODODENDRONS.—Among the best in bloom at the time were H. H. Hunnewell, Henry Ingersol, Sefton, Lady Armstrong, Alexander Dancer, C. S. Sargent, Champion and Ralf Sanders.

WILD ROSES.—Among the host of different species in bloom were blanda, Nutkana, grandiflora, multiflora, Fendleri, cinnamomea, rugosa and its forms, spinulifolia, dumetorum and alpina. Rosa acicularis was the earliest of all to bloom.

HYBRIDIZING ROSES.—Mr. Dawson has done a great deal in this line and achieved some remarkable results. He has enlarged the blooms of rugosa and deepened its color, doubled and increased in size of blooms of multiflora, and so on. But he tells me he can only hybridize these roses satisfactorily indoors; outside plants no matter how carefully pollenated are very shy at crossing. WM. FALCONER.

ROSES. ROSES. ROSES.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

WE SHALL HAVE a great photograph album for our convention supplement. We already have nearly 200 photographs and they are coming by every mail. Please send *yours* in now as it is desirable to have all in hand before we begin engraving. From the number of newly taken photos we have received we judge our identification plan has been of decided benefit in stirring up those in the trade to have their photos taken. One gentleman writes that his wife expressed herself as under lasting obligations to us for getting him started on a long contemplated trip to the photographer's, and several when sending photos note that it is the first they have had taken in many years.

WE HAVE received from Messrs. Rea Bros., Norwood, Mass., a few flowers of Achillea mongolica, which they advise us is with them much earlier than either A. ptarmica fl. pl. or A. serrata fl. pl. They find it perfectly hardy, very free flowering on long stalks and it lasts well when cut. The flowers are single, of good size compared with other achilleas and are certainly very persistent as the petals did not drop even after the blooms sent us had completely dried.

THERE HAS been a change in the Dingee & Conard Co., West Grove, Pa., Mr. Conard withdrawing from the firm.

Directory Corrections.

At Marshalltown, Iowa, erase the Marshall Floral Co., and J. F. Smith, as both are now out of business.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

WANTED—Boiler (cast) to heat 4,000 feet of glass. Address CHAS. POMMERT, Greenfield, O.

WANTED—To buy or rent greenhouses around Chicago. Address Box 11, care Am Florist.

WANTED—At once. Good, sober man to take charge of violets and chrysanthemums. F. BURKI Bellevue, Pa.

The Seed Trade.

The Hartford Conve. tion.

The tenth annual meeting of the American Seed Trade Association convened in the Allyn House, Hartford Conn., Tuesday, June 14. The following members were present or represented (with others admitted as below). John H. Allan & Co., Picton, Ont.; C. L. Allen, Floral Park, N. Y.; F. Barteldes & Co., Lawrence, Kan.; Alfred J. Brown, Grand Rapids, Mich.; J. Bolgiano & Sons, Baltimore,

PRESIDENT J. C. VAUGHAN

Md.: D. I. Bushnell & Co., St, Louis Mo.; W. Atlee Burpee & Co., Phila., Penn.; A. N. Clark, Milford, Conn.; E. B. Clark & Sons, Milford Conn.; John Lewis Childs, Queens, N. Y.; Comstock, Ferre & Co., Wethersfield, Conn.; E. Decker, Wethersfield, Conn.; Weeber & Don, New York City, N. Y.; Z. DeForest Ely & Co., Phila., Pa.; Frank T. Emerson, Omaha, Neb.; T. N. Griswold & Co., Wethersfield, Conn.; Johnson & Stokes, Phila., Pa.; S. F. Leonard, Chicago; W. H. Maule, Phil., Pa.; F. E. McAllister, New York City; J. Chas. McCullough, Cincinnati, O.; Wm. Meggat, Wethersfield, Conn.; Edward B. Parsons, Falsington, Pa.; Pitcher & Manda, Short Hills, N. J.; W. W. Rawson, Boston, Mass.; C. A. Reeser, Springfield, O.; J. B. Rice & Co., Cambridge, N. Y.; R. A. Robbins, Wethersfield, Conn.; The Steele Bros., Co. Limited, Toronto, Ont.; Storrs & Harrison Co., Painesville, O.; J. C. Vaughan, Chicago; S. D. Woodruff, Orange, Conn.

President F. W. Barteldes occupied the chair and Secretary Don was present. The following new members were admitted, enlarging the roll to the creditable total of over one hundred members: C. C. Morse & Co., Santa Clara, Cal; Trambull, Strean & Allen, Kansas City, Mo.; H. W. Buckbee, Rockford, Ill.; Taylor Bros., Camden N. J.; H. Phillips Seed & Implement Co., Toledo, O.; H. Michell, Phila., Pa.; H. G. Faust & Co., Phila., Pa. W. Elliott & Sons, New York City; John S. Pearce & Co., London, Ont.; F. R. Pierson Co., Tarrytown, N. Y.; Phil. Stimmel, Omaha, Neb.

The absence of Messrs. John Fottler, Albert McCullough and W. Atlee Burpee was much regretted.

The general business of the convention was most satisfactorily handled by President Barteldes.

Election of officers for the ensuing year resulted as follows: President, J. C. Vaughan, Chicago; Vice-Pres., Z. De-Forest Ely, Phila.; Sec'y and Treas., A. L. Don, New York City.

Brief minutes of such of the transactions of the association as are available for general publication will be noted in our next issue.

WE ARE in receipt of some good stalks of celery from Geo Hancock, of Michigan. The foliage has a decidedly variegated appearance, being splashed green and white. Mr. H. claims earliness and quality in addition to the variegation. We can see no advantage in the latter peculiarity over existing lighter sorts. If its earliness has been proven in a careful comparative test with other early kinds, it may be valuable in that regard. There is too great a tendency to multiplication of names nowadays without multiplying advantages.

WRINKLED PEAS are reported to have suffered seriously in vicinity of Cape Vincent from heavy rains.

BOSTON.—John Fottler, Jr. has gone to the St. John river, P. Q., to fish for salmon.

CHICAGO.—Mr. A. D. Perry, of Syracuse, is in the city, but says he is not a delegate.

AN ADVANCE list of premiums to be awarded at the second annual chrysanthemum, carnation and orchid exhibition of the Bay County Hort. Society, at Bay City, Mich., next November, has been issued. Prizes, so far as arranged, amount to $1,028.50. Copies may be had on application to the secretary, Mr. T. J. Cooper, Bay City, Mich.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

Bulbs for Forcing.

Our preliminary list is now ready, and will be mailed free to all trade applicants. Large buyers should write for special quotations.

Raising Pansy Seed.

Most of the pansy seeds sold here are imported from abroad, as the labor of picking by hand and the care required in growing the choicer strains would make it an expensive business, besides the difficulty in growing them well during the hot summer months, as the best strains, very shy seeders at best, will not impregnate well in warm weather, only a very small portion of the flowers forming pods, and for a short time at that.

In Germany, where the largest part of the supply comes from, almost every concern raises its own seed, the tedious labor of picking by hand being performed by women and children, while in France the seed raising is more in the hands of specialists, who sell their whole crop to the seed merchants on stipulated terms, much the better way I think. Also there, with the advantage of a favored climate, the picking season lasts till fall, the pansy blooming well the whole season, a result which would be rather difficult to obtain here, with our hot summers and dry winds. The seed beds are gone over every day, seed picked when fully ripe, as the pods open very fast, and much seed would get lost.

A shady exposure is not favorable for seeding, none answering so well as getting the full sun in the morning with none in the afternoon. This is the most desirable situation. The common strains will seed freely under any circumstances, almost, but as they improve in size and colors will produce gradually less seed.

DENYS ZIRNGIEBEL.

Vines and Climbers.

I have read Emily Louise Taplin's notes on vines and climbers for retail trade, with great satisfaction, but I see she fails to mention Dioscorea Batatas, a climber but little known, that can be used in almost any capacity. I have them growing 30 feet high, and they can be used in boxes. They are perfectly hardy and one of the finest vegetables, growing at the depth of 8 feet, to remain in soil for three years. P. H. FOSTER.

CHRYSANTHEMUMS.

We have still on hand a stock of the choicest recent introductions. To those who have not yet purchased, we would say that young plants procured at this late season can be grown for fall flowering and exhibition purposes, but orders should be sent in at once for this most profitable and popular florists' flower. Our stock yet contains a limited quantity of Harry May, Mrs. W. S. Kimball, Ada McVickar, Mr. Hicks Arnold, Miss Annie Manda, Mrs. E. D. Adams, Mrs. M. F. Gallagher, Miss Bertha N. Robison, Mrs. J. Hood Wright, Rohallion, Ramona, Mrs. DeWitt Smith, L. B. Dana, Daisy, Gold, Mrs. Grace Hill, etc.

ARECA LUTESCENS SEED.

PITCHER & MANDA,

UNITED STATES NURSERIES. **SHORT HILLS, N. J.**

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season: quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

C. C. ABEL & CO, New York.

Questions and Answers.

1. What treatment should Genista canariensis receive when through blooming? Will it thrive as a house plant?

2. What is best treatment for Curculigo recurvata? The ends of the leaves of my plants seem to be turning black.

3. What causes mildew to gather on the pots of some of my palms? Plants are apparently perfectly healthy and flourishing. Will it prove injurious to the plants? H.

1. After blooming the genista should be cut back moderately so as to induce a bushy growth, and as soon as the young shoots are fairly started the plants may be re-potted and the pots plunged in ashes or soil as may be most convenient in some partly sheltered location outdoors. Genistas are not strongly recomended for house plants, but may be so used with a reasonable degree of success.

2. It is not uncommon for the tips of the leaves of Curculigo recurvata to turn black, though the trouble may have been aggravated by too much water during the winter.

3. The mildew, so called, on the pots, is probably caused by decaying woodwork of the bench on which the plants stand, and if allowed to remain in the pots will more than likely injure the roots. A good watering with lime-water may kill the fungus in the pots, but the better way would be to remove the cause, by cleaning off the bench thoroughly and giving it a good coat of whitewash. T.

I. FORSTERMAN,

NEWTOWN, L. I., NEW YORK.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

JOHN IRVINE CO.,

EVERY FLORIST IN THE LAND

Should have a good bed of the New Giant Forcing

DAISY SNOW CREST

Introduced by Mr. H. A. Dreer.

We are Headquarters, and have 20,000 plants to offer at $1.50 per doz.; $10 per 100; $80 per 1000. It is easily and rapidly propagated by cuttings and division, and **NOW IS THE TIME** to get up a stock for fall planting. It is double the size of Snowflake and vastly superior in every way. Many of the blooms were larger than a silver dollar as we grew them last winter. It is a free and constant bloomer, requiring the same conditions as violets.

We also have a heavy stock of **Snowflake** that we wil close out at $1.50 per 100; $12 per 1000, for the next three weeks.

Yours very truly,

J. C. GIBSON, Woodbury, N. J.

MEXICAN PLANTS.

LITTLE'S ANTIPEST.

—— A ——

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

—— BY THE ——

CALIFORNIA STATE FAIR OF 1890.

This preparation Is a sure destroyer of the **Scale, Wooly Aphis** and **Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure** and **Cheap.** No fruit grower or florist should be without it.

Send for Circulars and Price List.

FLUSHING, Queens, Co., N. Y.

Foreign Notes.

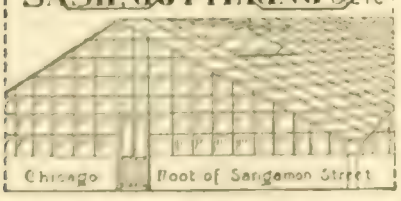
AN International Botanical Congress will be held at Genoa, September 5 to 10.

CYCLAMENS with the fragrance of the violet are promised us by an English plantsman.

THE National Chrysanthemum Society of England now has 656 members, and the number of affiliated societies is 87.

MESSRS. Jules DeCock and DeSmet, of Ledeberg, Ghent, Belgium, have been made Chevaliers of the Order of Leopold.

THE ANNUAL exhibition of the Royal National Tulip Society of England was held at the gardens of the Manchester Botanical Society, June 8.



THE carnation growers of England are suffering severely from the ravages of what they term the carnation maggot. It is supposed to be the larva of some small fly that deposits its eggs in the base of the leaf in spring.

IN ITS issue for May 28 the London *Garden* prints a list of about 100 American chrysanthemums that have been found to be of value to English growers, and speaks approvingly of the excellence of new American sorts. Our system of registration is also commended, but we are urged to "attempt something like classification" in announcing new flowers.

THE LONDONERS are now enjoying a rather odd combination in the way of an exhibition. It is called the "International Horticultural Exhibition and Buffalo Bill's Wild West." But sad to relate, according to the local daily press, the posies are relegated to the position of second attraction, while the mass of the visitors miss no detail of the reckless William's turbulent display.

AMONG the plants that were given first-class certificates at the recent Temple show of the Royal Hort. Society of England were Pteris tremula densa, Tradescantia reginæ, Azalea Mrs. Anthony Waterer, Pteris serrulata gracilis, Selaginella elegans. Awards of merit went to Begonias Leopold Rothschild, Duchess of Westminster, Picotee and Laing's Triumph; Tree Pæonias Snowflake and Orme; Tea rose Princess May; Gloxinias Clio, Cicely and Claribel; Carnations Mrs. H. Cannell and Mr. G. Devas; Dracæna Bartletti; Croton Reidii; Lobelia Barnard's Perpetual; Pelargonium Princess May.

Mass. Horticultural Society.

ROSE AND STRAWBERRY EXHIBITION.

The annual Rose and Strawberry show took place on Wednesday and Thursday, June 22-23, having been postponed one week later than scheduled date on account of the backwardness of the season. As far as the quality of the roses shown was concerned it might as well have taken place at the time originally selected, for they were the poorest lot of roses staged here for many a year. The indications were very unpromising beforehand owing to the severe weather in April which seemed to have taken all the vitality out of the plants, and the extremely hot spell which rolled all over this section of the country for several days preceding the show finished up what little life there was in the buds.

Under such adverse conditions it is impossible to produce exhibition roses even with the greatest care and attention. Some of the big exhibitors of other years stayed away rather than show inferior stock, but their sagacity was not so commendable as was the good spirit shown by others who had just as much reputation at stake but who waived their personal interests rather than see the Society humiliated by putting up a rose show with no roses in it.

So the tables in the upper hall were well filled with roses and the scene was a brilliant one notwithstanding the inferiority of many of the individual blooms.

There was one notable exception to the average quality of the exhibits and that was the display made by Mr. Walsh, gardener to J. S. Fay of Wood's Holl. Here were some really very fine roses. Everything that Mr. Walsh sends to the Hall is good and he is entitled to much credit for the appearance of his blooms, although of course he is favored with a climate at Wood's Holl which is nearly English and is just right for the production of fine out door roses. In his lot were four new ones, all of them introduced by Alex. Dickson & Sons of Belfast, Ireland, viz: Marchioness of Dufferin, Margaret Dickson, Jeannie Dickson and T. W. Girdlestone.

The Lyman Prizes for 24 distinct varieties, three of each, were awarded to J. S. Fay, John L. Gardner and W. H. Spooner, respectively. These three, together with Dr. C. G. Weld, A. Galbraith, N. T. Kidder and Mrs. E. M. Gill, comprised the principal exhibitors of roses. Other cut flowers for which regular premiums were offered were herbaceous pæonies, sweet williams and tuberous begonias. There were no begonias shown and the pæonies being almost entirely past, there were no competitors except T. C. Thurlow. In sweet williams there was a very extensive display, the quality throughout being very fine. E. Sheppard & Son, J. H. White and F. S. Davis were awarded first, second and third prizes for thirty spikes.

Rea Bros. staged a fine collection of hardy herbaceous stuff, all named, as also did the Harvard Botanic Garden, the latter in large vases and making a very showy display.

From F. B. Hayes came an extensive display of roses, rhododendrons, pæonies, etc. and A. Galbraith's big vases of foxgloves on the stage added greatly to the appearance of the upper hall.

Jackson Dawson's collection was as usual very interesting. The seedling Andromeda speciosas were the finest ever shown here and Syringa Japonica and Pekinensis were in grand form. A first class certificate was awarded Mr. Dawson for his seedling philadelphus, the blooms of which are very large, purest white and strongly perfumed.

In the plant department the orchid display was quite extensive, well grown plants being shown by J. L. Gardner, Mrs. Durant, Dr. C. G. Weld and E. W. Gilmore. Mr. Gardner's Epidendrum vitellinum majus drew first prize as specimen plant, a good Brassia verrucosa from Mrs. Durant coming in second. Mrs. Durant was first on three orchids and E. W. Gilmore first on six.

The most noticeable plants were Cattleyas gigas and Mendelli, Dendrobium phalænopsis Schroderiana and Odontoglossum vexillarium from J. L. Gardner; Cattleyas Mendelli and Mossiæ, Oncidium pulverulentum and Cypripedium grandiflorum from E. W. Gilmore; a splendid Cypripedium barbatum grandiflorm from Mrs. Durant, and Cypripedium Lawrenceanum from Dr. Weld.

J. L. Gardner's collection of ericas was much admired, and received first prize for hard wooded greenhouse plants. The prizes for specimen plant in bloom brought out a row of towering rhynchospermums ranging from 10 feet in height down.

Owing to cooler weather the roses on the second day of the show were considerably better than those staged on the first day.

Among the visitors present were Mr. Hugh Dickson of Belfast, Ireland, Mr. Jos. A. Dirwanger, Portland Me., Judge Hoitt, Nashua, N. H., and Messrs. Cowles and Gardner from Newport, R. I.

A Grand Spring Exhibition.

A grand show of plants and flowers for the spring of 1893 will be held in the Madison Square Garden, New York, at the end of April and first few days in May, in which a premium list of $6,500 is offered. Among the leading features are $800 offered for palms and decorative plants alone; $1,000 for azaleas; $1,000 for other flowering plants; $650 for tulips and bulbous plants; $450 for or-

chids; for rhododendrons and such like plants $275; for spring bulbs other than tulips $550; for cut flowers $400; and many other miscellaneous items bringing the sum total up to the sum above named.

Already the schedule is in press and will soon be ready to mail to all requiring it. It is hoped that this will bring out the finest spring show ever attempted in this country or in any other. The managers of this affair have been working steadily at this for some months and have now perfected the whole arrangements. A new and entirely novel feature in electric lighting will also be introduced by the Madison Square Company, making the whole thing one of the greatest features that has ever been attempted.

The success of the chrysanthemum show last fall stimulated the members to again secure the services of Mr. Plumb as general manager, which in itself is a guarantee of having everything carried out in a successful and comprehensive manner. The members of the New York Club are awaking to the fact that these monster shows require a great deal of energy and the boys are all taking hold of it with vim, so that we may safely predict a grand treat to any and every horticulturist in the country who will honor them with a visit during our shows, either in the first week in November or our spring show as above named. YAM.

Bedding Geraniums.

The geranium beds at Lincoln Park, Chicago, always present a very brilliant appearance and thinking that a large number of the readers of the FLORIST would be interested in knowing the sorts used and method of growing and caring for them, we obtained the following from Head Gardener Stromback.

In single reds he uses Rev. W. Atkinson, which he considers has the most dazzling color of any geranium. Its habit is good, averaging from 12 to 14 inches in height; it is a good bloomer and the flowers stand well in all sorts of weather. And it is as useful under glass as bedded out.

H. K. Clifton is similar to Atkinson but lighter in color.

Queen of the West he uses in large beds only as it grows too strong for small ones.

He has discarded Gen. Grant as he finds Queen of the West so superior.

Dell is another sort that has been discarded. It is similar to Atkinson in color but is a very strong grower and with him produces more foliage than flowers.

Excellent, scarlet with white eye, was also dropped. The foliage turns yellow in hot weather. It is a good bedder with the exception of this fault.

In semi-double reds, Ernest Lauth is a strong grower and is better for use in large beds than in small ones. It grows to a height of about 20 inches.

Guillaume Mangelli is more dwarf in habit, growing to a height of about 12 to 14 inches, and is a fine bedder.

Pres. Leon Simon has about the same habit as Ernest Lauth but the flowers are of a different shade of color.

Wonderful (semi-double scarlet) is a dwarf variety and a good bloomer. It is excellent except during a wet season. The flowers spoil badly in rainy weather, and after a shower it takes several days to get into condition again.

In pink sorts Emile de Girardin, semi-double, doesn't grow quite so strong as Ernest Lauth but is a fair grower and throws the flowers far above the foliage.

Doctor Jacoby (pink and salmon) is in habit much like the preceding. It is of no value under glass but when bedded out makes a grand show.

Master Christine, single, grows only 12 to 15 inches high and is a good all round bedder.

Gloria de Carbonay is single, silvery pink with salmon eye, and grows to a height of 15 inches.

Madame Thibaut has been discarded on account of the foliage turning yellow in hot weather, and its doing so miserably during a rainy season.

In white varigated leaved geraniums he uses only Mt. of Snow and Mme. Salleroi. The latter he uses for edging only, as in the middle of a bed it damps badly during wet weather.

Earl Roslyn is the only other variegated leaved sort he uses. It is very dwarf averaging about 8 inches in height, and is used in the body of the beds as well as for edging.

With the exception of the variegated leaved sorts, all the geraniums are propagated about the middle of September from bedded plants, the ripest sorts being selected for cuttings. The cuttings are well trimmed, leaving only the two center leaves, and these two are partly cut away when large. Care is taken to remove the bases of all leaves on the stem so as to avoid any places for lodgment of water which would be apt to induce rot. If a flower stalk is showing it is cut away with the knife, but the leaves are pulled off by bending backward as this leaves a smooth stem and nothing to catch and hold water. The cuttings are then placed in 2½ inches of sand on a bench in one of the greenhouses.

If the weather during the latter part of August or the beginning of September has been wet, the wood will be soft at the time of propagation and in this case the cuttings are treated as follows: After being placed in the sand they are given a good heavy watering to settle the sand well around them, and then no more water is given them for a week or ten days except a light sprinkling or syringing over the foliage on bright days to prevent wilting. The house is freely ventilated, and during sunny weather is shaded with lath-shading from 11 in the morning to 3 in the afternoon. After ten days of this treatment the cuttings are ripened sufficiently to stand full exposure to the sun at that season and no further shading is necessary. After the cuttings are callused they are given a good watering whenever dry, but only when indications of being dry are noted.

They are rooted in about three or four weeks, and are then potted in 2½-inch pots in soil having a liberal admixture of sand to insure good drainage, and placed in a house having a temperature of about 60° until the roots have well started. Afterward the temperature is gradually lowered to 50° and then to 45° in middle of winter, and the plants watered very sparingly, the idea being to keep them as nearly at rest as possible, to save room, until repotted and started up in January or February. As they commence to grow the tops are pinched out to induce a bushy growth, and if crowded for room the larger leaves are picked off to admit light between the plants.

About three weeks before time of planting out the hardening off process is begun. A little ventilation is given during the day, gradually increasing the amount until at the end of a week the plants can stand full ventilation night and day.

Mt. of Snow has to be handled differently as it seems impossible to ripen the cuttings by the above described method. Plants are lifted and carried over and cuttings taken from these during winter and early spring.

Allamandas.

The various members of this extremely showy genus of stove plants are best adapted for exhibition purposes or for conservatory decoration and as such should be included among the stock of the retail florist.

For cut flower use they are of little value, as the flowers do not last under such circumstances, but when planted out at the end of a warm house or grown in pot and trained on a balloon trellis, the scandent species form wonderfully effective specimens.

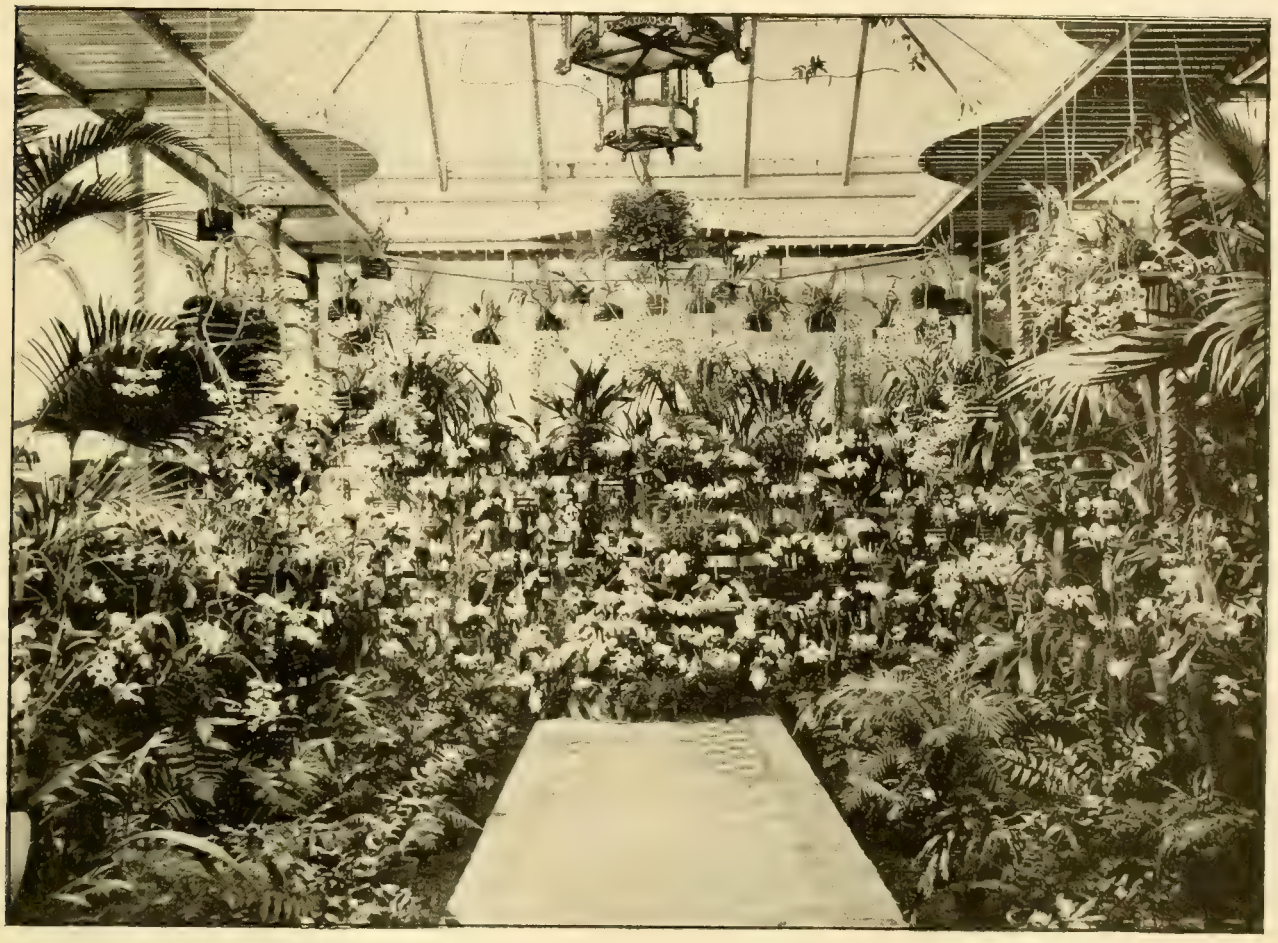
In regard to culture the allamandas are not very exacting, providing they are grown in a house in which a temperature of 60° to 65° is maintained, and all through the season of active growth an abundant supply of water should be given. The soil best suited for these plants is a light loam, to which should be added a liberal amount of dry cow dung, and the plants should be given proper drainage in potting.

During the winter a smaller quantity of water is required, and in fact many growers ripen them off after the manner of a grape vine and then start them into active growth about January or February, previously pruning the plants quite severely.

In the case of pot-grown specimens that are trained on trellises it is well to remember in tying the shoots that the latter should never be trained down hill, that is, the point of the shoot should always be given an upward tendency, as they produce a much better crop of flowers under such conditions.

Propagation is readily effected by means of cuttings of young growth, or by root cuttings, the latter being formed of short sections of the stronger roots treated in much the same manner as root cuttings of bouvardias. The latter is a very easy method by which to secure a stock, though it is quite possible that plants raised from root cuttings may not prove quite as free flowering as those from tops.

In the list of varieties A. Schottii is one of the most noteworthy, being of strong and rapid growth and giving a profusion of its bright yellow flowers nearly all summer, the flowers being of the tubular form common to the genus and are frequently four inches in diameter.



A. Hendersonii bears some resemblance to the preceding, but is shorter in growth, and the flowers, though nearly as large, are more inclined to orange yellow in color.

A. grandiflora also has very large flowers, but is not so strong a grower as those already noted, and in color is pale yellow.

A. cathartica is one of the oldest members of this group and is but seldom seen now. It is also of scandent habit and produces large numbers of bright yellow flowers that are from two to three inches in diameter.

A. neriifolia, as its name indicates, is somewhat like an oleander in growth, being of shrub form and compact habit, the flowers being golden yellow marked with orange, and though comparatively small are so freely produced in clusters that it becomes an admirable plant for establishments of limited size, and thus could be recommended in some cases where the stronger growers would not be advisable.

A. violacea is the rarest species of the

VIEW IN THE CONSERVATORY OF MR. H. H. HUNNEWELL, WELLESLEY, MASS.

genus, though first introduced some 40 years ago, and is also peculiar in being the only allamanda having flowers that are not some shade of yellow, those of the species in question being pale purple. It is a somewhat slender grower and through wrong treatment or some accident was apparently lost in cultivation, for a number of years until re-introduced by a European firm during the last decade.

W. H. TAPLIN.

Notes From Prof. Sargent's.

The name of Professor C. S. Sargent is so intimately associated with trees and forestry that we seldom think of him as being the owner of one of the finest and most extensive private gardens in the country.

He is great on rhododendrons and azaleas and every year in June endeavors to have a large display of these as well as of Indian azaleas in bloom together. Then he invites his friends to come and feast their eyes upon his pets.

His Indian azaleas are now (middle of June) in splendid bloom and arranged under a spacious conservatory-shaped canvas attached to his residence. Having them in bloom so late as this is caused by late growth, setting their flower buds late and wintering them in cool pits. On the veranda beside the azalea tent were specimens of rhynchospermum 7 to 8 feet high. "Plant them out in summer," said the professor, "that's the secret of success." Bambusa aurea 12 feet high in tubs was also placed on the veranda, but because it is continually dropping its old leaves or scale bracts of the young growth, and making a mess, it is not regarded with much favor. Wistarias grown in tubs and trained as standards are used about the house when they are in bloom and are liked very much.

Among the best of the outdoor rhododendrons were Lady Armstrong, Everestianum, Mrs. Milner, Charles Dickens, E. S. Rand, Lady Grey Egerton, Delicatissimum and Alexander Dancer.

Along the side of a walk at the back of his rhododendron border beside the pond is a stone wall supporting a bank of earth, and this wall is completely hidden in a rank growth of poison ivy. "Why do you have that villainous thing there, Professor?" I asked him. "Well it's beautiful in the fall when its leaves begin to turn," he answered. "Yes, it poisons me badly too," he continued. Well, a man can do what he likes with his own. But my advice to you one and all is, erase every vestige of that vile plant from your property. Its presence is too great a price to pay for a streak of nature's glow in our garden.

Syringa villosa, a very beautiful and late blooming lilac from Northern China, was in good bloom or rather past its best. Prof. S. tells me that the longer known Himalayan plant known in gardens as S. Emodi is the same as or at most a form of S. villosa. Botanically this may be so, but horticulturally they are decidedly distinct, and villosa is the better one of the two by far.

Pointing to a handsome specimen of Syringa Japonica he remarked "but that's the beauty." So it is, I admit, and the latest blooming. But where rose bugs are a plague as they now are with us we get no good of Japonica's flowers as the panicles are alive with the vermin. These insects are more partial to the flowers of this section of lilacs, namely, Amurensis (which is past) and Pekinensis and Japonica (both of which are now in bloom) than any other parts of any other plants with us.

The Professor is down upon retinosporas, they are not reliably hardy. Well, they may be sour grapes at Boston, but at Glen Cove I can assure you we think they are pretty nice evergreens.

And he is severe upon Japanese maples, that is the polymorphum and Japonicum sections, because they die out so. He used to have lots of them but they have dwindled down to two handsome specimens of crimson leaved varieties. These maples are, as far north as New York, I know, considerably affected by the Japanese die back (we call it this because we know of no better name). A branch will die off this year, another next year, and so on unaccountably, and in summer as much as in winter. Dryness at the root particularly induces this evil. With good ground, abundant moisture summer and winter, protection from hot sunshine and bleak winds, one can grow these maples well enough. If they are short lived, by growing them low branched and elbowing the branches into the ground we can keep on renewing and invigorating them, for they root quite readily from layers.

He has a very fine specimen of Acer cissifolium, a species seldom heard of. It makes a dense, broad headed tree 10 or

11 feet high, is in perfect health and apparently perfectly happy with its lot at Brookline and is seeding freely.

The only unique tree I have got is that dwarf Picea pungens there, he said pointing to a dense little plant 2 or 3 feet high. It was one of the young plants raised from that lot of Colorado seed nearly 30 years ago, from which all the "first" fine blue specimens were raised.

He is getting solicitous about the value of the blue spruce (Picea pungens) as a permanent garden plant, the indications are that it will lose its lower branches *a la* Balsam fir. But, well treated, it won't do that under 30 years old, so I don't see the use of worrying much about it.

Syringa Alberti looked fine as a plant and so it did too at the Arboretum, but when I ventured to suggest that it didn't appear as if it had many blooms on it this year I found I was treading on somebody's corns, for this little shrub is highly prized around Boston. Its rose lilac flowers are real pretty and delightfully fragrant, but say what you will, it doesn't blossom very full every year.

WM. FALCONER.

Astilbe Japonica Compacta Multiflora

This comparatively rare astilbe is a green leaved form of the Astilbe Japonica variegata and possesses the dense habit and large flowers which characterize that scarce and fine variety. The foliage is larger and much darker than in the common A. Japonica and the flowers are also much larger and more compact. It is a grand plant for decorative purposes and also for cutting.

Mr. J. Wm. Colflesh, of West Philadelphia, considers this sort quite an acquisition to our list of spring stuff and intends to plant it more largely the coming season. Evenden Bros., of Williamsport, Pa., also grew this astilbe last season and were greatly pleased with it. They state that they will grow it again next winter. Several other growers in this vicinity have tried it on a small scale and all I have heard from speak favorably of it and express their intention of growing more next time. This astilbe is undoubtedly a good thing and should be "put on your list" for next season's operations.

By the way, does any one grow the Astilbe Thunbergii for forcing purposes? It is largely used in this way in Europe, but I have not heard of any one who has tried it here.

G. C. WATSON.

Philadelphia, June 11, '92.

Treatment of Cycas Revoluta Stems.

Replying to the query of Messrs. Gravett & Son, dry stems of Cycas revoluta should be potted at once into as small pots as the size of stem will permit, for instance, a stem seven or eight inches in diameter can usually be put into a 10-inch pot.

They should be firmly potted in good loam, soil of a light character being best for the first potting, and the plants should then be placed in a warm house, where they frequently start into growth in six weeks or two months, though in some cases a much longer time may be necessary.

The young growth should be protected from the sun and should not be handled, as a slight touch may disfigure the fronds.

W.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date of introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

New York.

Summer drowsiness seems to have settled down over the flower trade in this city. The retail florists do not make much of any attempt at window displays and keep whatever flowers they have locked up in the refrigerator until a stray customer appears. The wholesale trade is naturally in the same condition. At the big commission dealers' and at the market the quantity of flowers being brought in has fallen off greatly during the past week.

Roses are rapidly diminishing in number and as to quality they could not be much worse than they are. A moderate supply of really fine roses could be sold now for fair prices. This at least is one indication of improvement in the market over the condition recently, when even good roses could not be disposed of at any price.

Out among the growers the principal interest now is in preparations for the next year's campaign. Old roses are being thrown out, young ones prepared, new houses and repairs on old ones, are engaging the attention of many, and the chrysanthemums which are destined within a few months to have their day are beginning to monopolize attention. Inside a greenhouse is neither comfortable nor safe during the heat of the day just now, and he who looks for the proprietor under the hot glass roofs looks in vain. But after the long winter's pull no one will begrudge to the grower a few weeks easy life.

With the big sale of Philadelphia plants at Young's on June 23 closed the auction sales for the season. It was a most auspicious closing. The prices obtained were remarkably good, the attendance large and the interest shown in the sale far beyond what was expected. The quality of the plants had a good deal to do with this. A finer lot of palms, ficuses and other plants which Mr. Harris and Mr. Craig grow so well, has never been offered here. Forsterman had some stuff in the same sale and is in high glee over the success. Mr. Gibson, of Newport, was one of the largest buyers.

The committee having in charge the arrangements for transportation to Washington next August report satisfactory progress and will soon have their plans complete.

James Dean will have the grandest display of French cannas ever seen here in bloom this season. One bed measures 180 feet by 350 feet and another about 100 feet by 250 feet, and these are both planted solid with Crozy, Star and other choicest kinds. It will be a big show when in full bloom.

Mr. Hugh Dickson sails for Ireland on July 2.

Mr. S. J. Thompson, of Louisville, Ky., is in town.

Boston.

There is no noticeable change in the flower market this week. The school graduations and similar festivities suffice to keep the florists fairly busy, but it is small work and not much profit in it. Class day at Harvard College as usual made quite a little demand for nice flowers and considerable plant decorating was done by local florists. Another week will about finish the season, customers will flit out of town and summer pastimes such as bowling and Washington trip will be the only subject to interest the boys. The bowling club here will send out a strong team this year and their competitors will do well to look sharp, for they mean business.

Just now the roses coming to the city are very poor and good ones can be sold for full prices. White roses especially rule high when of good quality, even as much as $12 per 100 being paid for choice lots.

Jackson Dawson has a fine hardy white rose, a seedling from Boston Belle, probably resulting from a cross between Boston Belle and the old white Cottage rose. One of the showiest shrubs in bloom at the Arboretum at present is Hydrangea vestita from the mountains of Pekin. It is a grand mass of white bloom.

At the Bussey Institute they have a fine strain of Gaillardia grandiflora, blossoms frequently measuring 4½ inches across.

Geo. Sutherland, of Peck & Sutherland, is to be married on June 28. This finishes up all the wholesale dealers in Boston, not a bachelor left in the whole lot. George has been practicing with a tall hat after dark. He has not got courage enough yet to appear in it by daylight.

Charlie Evans and Wm. Edgar sailed for the old country on Saturday, June 25.

Washington.

The regular monthly meeting of the Florist's Club was held Wednesday, the 15th. Report of the schedule was adopted. Chrysanthemum show will be held Nov. 15, 16 and 17th in Washington Light Infantry Hall.

Weather continues hot and dry though we had a light shower Thursday evening. The grass in the parks and the shrubbery about town begin to show the great need of rain.

The cut flower trade in the markets continues good, the quality of the flowers poor, owing to the heat and want of rain. Good La France, Brides and Perles are bringing from 25 cents to 50 cents per dozen in the markets, from 50 cents to 75 cents in the stores. The sale of bedding plants is virtually over. The demand for palms (phœnix and latanias), pandanus and rubbers is still good. Quite a number are disposed of by the market florists each market day (Tuesdays, Thursdays and Saturdays).

There is little doing in the cut flower trade in the stores, weddings and funerals being about the only calls they have. White and pink sweet peas and pond lilies are in great demand for funeral work at present.

Mithras Lodge of Perfection No. 1, Ancient and Accepted Scottish Rite, held a Lodge of sorrow Tuesday evening, June 21, in the Cathedral room of the Rite. The chairs and lights in the east, west and south were very tastefully banked with palms, through which and towering above them, were large spikes of yucca with their beautiful white bell shaped flowers, presenting a most striking effect. Along the railing of the balcony was arranged a line of palms, and suspended from the balcony was a number of baskets of growing plants, the bottoms of which were covered with cut roses, thus serving a double purpose, for while those on the balcony could see the baskets of plants those in the cathedral below could see the cut flowers. The whole presented a very pleasing effect and did credit to Messrs. Small & Sons, the decorators. Though it was not a large affair it was elegant.

Clark Bros., on the Bladensburg Road, are erecting a fine house 33x160 feet, in which they propose to grow nothing but Asparagus plumosus nanus. They are enthusiasts in this line; I think they have the largest stock in the country and it is in excellent condition.

C. LESLIE REYNOLDS.

LOTUS POND. TOKIO, JAPAN.

Chicago.

Business was very good last week on account of the school exercises, but now we face the dullest season of the year, which usually lasts about three months. Stock in general is very poor, and outside of a few Beauties it is hard to get a rose that is worthy of the name. All other stock is also poor with the exception of a few good batches of valley.

The Club committee on transportation to Washington has secured a special low rate over the best route from Chicago to the Capital, and if there is not a big turnout it won't be because the rate was not cheap enough or the route undesirable.

The Bowling Team will play a series of practise games next Friday evening (July 1) at the Superior Alleys, corner of North Clark and Superior Sts., and Capt. Hauswirth hopes to see all the bowlers present.

We are still enjoying from three to ten heavy rains per week and about two thirds of the time it is so chilly that an overcoat is desirable. The downpour of rain has played hob at Lincoln Park, especially with the herbaceous garden which lays a trifle low and which has been partially transformed into a lake. And the water stood so long among the plants that many will die and others are seriously injured.

The water poured down in torrents last Thursday evening and as a result there was not a quorum at the Florist's Club meeting and no business was transacted, but the faithful who defied the elements had a most enjoyable session afterward at the bowling alley.

W. J. Smyth has been appointed Chicago representative of the Florist's International Telegraph Delivery Association.

At Niles Center Jacob Meyer is building two new rose houses each 20x90.

Among recent visitors to the city were Elmer D. Smith, Adrian, Mich.; Jos. E. Bonsall, Salem, O.; E. V. Hallock, Queens, N. Y.; H. A. Siebrecht, New York; Avery Gallup, Denver, Colo.; J. T. Temple, Davenport, Ia.; D. B. Long, Buffalo; J. M. Gasser, Cleveland; J. Cole, Peoria, Ill; Geo. H. Bancroft, Cedar Falls, Ia.; Emil Kranz, Muscatine, Ia.; E. E. Kennicott, Wheeling, Ill., J. J. Schumacher, Sioux Falls, S. D.; James Schols, Grand Rapids, Mich.; L. Eckhart, Nashville, Tenn.

Philadelphia.

The past week has been very warm, beating the record for some years past for the same period in June.

In the fashionable quarter of the city the houses are all closed up, the windows and doors in most cases being boarded over, giving this portion of the city a deserted appearance. A few stragglers may be seen hurrying along, and who, if they happen to meet an acquaintance, have an apology to make for their being in town at this unseemly time.

There is still some demand for flowers, a few belated weddings having taken place, and some florists having quite a lot of funeral work.

Four dollars is the outside price for the best roses except a few hybrids which bring $1.50 a dozen. Small teas sell for 2 and 3. Sweet peas are very abundant and are offered as low as 25 cents a 100; carnations bring $1. Pink pond lilies from New England states are seen in the store windows; they are very pretty and sell fairly well. There are quite a few orchids about. C. F. Evans & Bro. have a nice lot of cattleyas in, but the sale is very limited at this season.

Robert Craig's cyclamens are looking very fine. He has many of them in 6-inch pots, fine bushy plants; they are from three to four months farther advanced than at this time last year. The seed was sown in September last and he expects to have a lot of them in 8-inch pots by the time they are one year old.

The houseful of crotons for bedding out was a great success; all were sold and another lot is coming on for decorative plants for fall. He has a little heat on these and some palm houses. K.

Baltimore.

One can not say hot, hotter, hottest, of the weather, for it has been the last all the week and though occasional showers have lessened the heat from time to time, the additional humidity made it harder to bear.

Steady trade is no more. What answers for trade is a great desert of dullness with here and there an oasis of funeral or wedding work. The growers have apparently found out that the time to replant is at hand, for, notwithstanding

the very limited demand, the supply is hardly up to it, and when any sudden order surprises a dealer, he is lucky if he can get all he needs in town. The exchange had not a bud left Saturday afternoon and nothing else but a few lilies and pink hollyhocks. Good buds are very scarce.

Though the bowlers have not been able to surpass all competition in bowling, yet the jolly crowd that assembled at the farewell supper given to the captain of the team, Mr. Hy. Bauer, on the eve of his departure for a trip to Europe, think that when it comes to suppers they are hard to beat.

From the beautiful iris on the front page of the souvenir, to the Havanas that appeared last on the bill of fare, it was simply gorgeous; Mine Host Brawner spread himself. The toast master, Mr. Sands, carried off the honors with his usual good graces, his toast to Henry being pronounced a regular "Chauncey Depew," and altogether the boys all say it was the finest supper they ever sat down to. Mr. Bauer sailed on the 22nd. MACK.

St. Louis.

Trade has been unusually good. Everything sold. To the question "Have you anything to sell?" asked of the commission men, one answered "A few sweet peas" and the other, "Nothing but my ice box."

The High school and Normal school graduations called for large quantities of flowers.

An important event was the wedding of Lieutenant Powhatton Clark, of the U. S. Cavalry, and Miss Elsie C. Clemens of this city. The ceremonies were performed at the St. Xavier's church, being conducted in military style. The floral decorations, furnished by Miss Teresa Badaracco, were considered very fine. The church was decorated with palms, hydrangeas, and other plants, the sacred heart altar being massed with red. All the cut flower work being in blue and yellow in accordance with the cavalry and regimental colors. The bride carried a large shower bouquet of stephanotis, Farleyense ferns, and white orchids, the orchids forming the shower effect. Eight brides-maids carried each a large shower bouquet of blue cornflowers, tied with yellow ribbon intermingled with cornflowers. The ushers wore boutonnieres of M. Niel roses and cornflowers. The house was decorated with palms, and other plants, and blue cornflowers, delphiniums and yellow ribbon. Mrs. Boyce gave the Lieutenant and his bride a reception Wednesday at Hotel Beers. The floral decorations were elaborate, two large rooms being decorated with palms, smilax and other plants, with the flowers all in yellow. Mr. Weber did the work in his usual artistic way.

The firm of W. A. Hanft & Co. has been changed to "The Halstead floral Co.," consisting of W. A. Hanft and A. S. Halstead, with Mr. Hanft as manager.

Mr. Tesson is planting his new rose house, which is 16½x300 feet.

Mr. Armsby, gardener to Mr. Kauffman, has two very fine specimens of Aerides Fieldingi now in bloom.

The number of visitors at the Mo. Botanical Gardens should have read 16,000 instead of 1,600.

P. A. Sexton has been admitted to the firm of R. Hausberger & Sons, and the style has been changed to R. Hausberger, Sons & Co. A new rose house 22x104 is about completed. J. C. D.

Worcester, Mass.

The stagnancy of summer trade has just began to touch us in this section and the boys are singing a variation of that old ditty we all learned at school:

The winter has gone and summer has come,
And what will the florist do then?
Poor thing!
But one clerk in his store and crape on his door
He'll wait till next winter to sing.
Poor thing.

Outdoor hybrids are coming in thick and fast and of very good quality, the very best bring about $2 a dozen. Pinks are also very plentiful and are selling as low as 25 cents per dozen.

The gardeners have nearly finished their spring bedding and are heaving big sighs of relief and giving their own stuff a little attention.

Lange put in a very handsome palm and table decoration for the Continentals Bunker Hill day. The end of the hall was banked with Otaksa hydrangeas and arecas, a large handsome specimen of Phœnix rupicola towering above, and two monster latanias on the ends. The banquet tables were fixed prettily with bowls of cut hybrids, and Asparagus plumosus, pots of Cocos Weddelliana, etc. were placed here and there, making a very fine effect. Covers were laid for 600.

At the first June meeting of the Horticultural Society, June 16, the exhibit was most excellent. Mrs. C. E. Brooks made a good display of cut flowers of hardy plants and shrubs and carried off first premium. A. A. Hixon and O. B. Hadwen both showed an excellent lot of cut pæonies. The hydrangeas also made a splendid showing, being strong and thrifty and well covered with bloom. A. H. Jones, H. B. Watts and A. A. Hixon were awarded firsts. O. B. Hadwen made a fine exhibit of rhododendrons and Ghent azaleas; and the iris, begonias and fuchsias all made a very attractive exhibition.

A monster trade procession has been arranged for the Fourth of July and the florists will probably have an allegorical car, though just what has not been decided yet.

Sargent is putting up two new houses and most of the boys say they must have more room. SEEDLING.

Buffalo.

"Graduating week" caused considerable activity in the trade. But with the exception of carnations, flowers were scarce; roses very poor and not enough to be had. Pink pond lilies sell well.

Webb & Bros. of Corfu, N. Y. have about completed two new houses, each 150x22. They will be filled with roses.

Our city was recently over-run by 6,000 members of the Order of Elks and there were a number of florists among them, including Messrs. Albert M. Herr, Lancaster, Pa., and S. Kehrmann Jr., St. Louis.

There promises to be a good sized delegation to the Washington Convention from this city. The bowling contingent are specially active and are anxious to redeem themselves by good work at the Capital. G. S.

If you have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

News Notes.

ORANGE, N. J.—T. H. Spaulding is building a new house 21x75 for roses.

JOHNSTOWN PA.—Mr. Adolf Stahl sailed June 16 for a three-months European trip.

ROCKFORD, ILL.—Mr. H. W. Buckbee recently gave an exhibition of orchids at his store that drew forth a long complimentary notice from a local paper.

MUSCATINE, IA.—Spring trade has been excellent in spite of the wet weather. Among the most popular plants is Canna Mme. Crozy. Plants in 6 and 7-inch pots have sold quickly at $1.50 each.

LAKE GENEVA, WIS.—Frank Leslie at S. W. Allerton's is pushing his chrysanthemums and intends capturing all the prizes at Chicago this fall. He is well loaded with all the new varieties.

DENVER, COLO.—D. S. Grimes is adding a new house 18x80 to be devoted to the growing of Rocky Mountain wild flowers, many of which are not only rare but of such beauty as to be worthy of general cultivation.

NASHVILLE, TENN.—Eckhardt & Co. are adding a new house 15x54 for roses. Spring trade has not been as good as it might have been. This section has had none too much rain this spring. In fact it has been rather dry.

JUNCTION CITY, KANS.—Wm. Horlacher has purchased Wm. Ransom & Son's greenhouses and will combine the establishment with his own. This will give him 5000 feet of glass. Walter Ransom has been employed by Mr. Horlacher.

DALLAS, TEXAS—Messrs. L. S. Ewing, formerly Sup't of Dallas Nurseries, and H. C. Quillen, Prop. of Dallas Floral Co., have purchased the entire business of Dallas Nurseries from Mr. J. M. Howell and have combined under the firm name of Dallas Nursery and Floral Co., retaining Mr. Howell as manager.

PHŒNIXVILLE, PA.—Spring trade has been very brisk—better than expected in view of the dull times. Sales of bedding plants about equal to those of former years. But prices are very low on account of the senseless competition from out-of-town growers who have cut prices to such an extent that there is nothing in the business here.

PUEBLO, COLO.—A heavy hail storm did much damage here June 16. Some 700 lights of glass were broken in the greenhouses of Harry Baker, and great injury was done to plants outside. Mr. Baker estimates his loss at about $3,000. Even the plants in the houses were completely stripped. Mr. Baker takes his loss philosophically and says that Providence has provided a quick and easy way of disposing of surplus stock.

NEW ORLEANS.—The Louisiana State Horticultural Society was organized at a meeting held in this city June 21. The Society starts with an initial membership of 70 and with the following officers: President, A. K. Clingman of Homer; Vice-presidents: E. M. Hudson of New Orleans, O. B. Jenkins of Jennings, T. J. Lacey of Washington, G. W. Stoner of Jewella, C. R. Panter of New Orleans; Secretary, S. M. Wiggins of New Orleans; Treasurer, W. C. Stubbs of New Orleans. The hall was handsomely decorated with plants and flowers contributed by Mr. R. Maitre, the florist and seedsman.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

Notes from the Arnold Arboretum.

II.

ACER GRANDIDENTATUM. — "Probably hardy but very slow growing."—J. D.

GLEDITSCHIA MONOSPERMA.—"Only a shrub here."—J. D.

RHAMNUS ALPINUS has fine foliage.

GENISTA DAURICA, hardy, slender stemmed, fine, past blooming.

RHUS AROMATICA var. trilobata, distinct and desirable. Pistillate plants fruiting.

QUERCUS GEORGIANA.—The most desirable of all dwarf oaks for color in fall. Quite rare.

SWEET FERN SHRUB.—Myrica asplenifolia. Not comptonia now.

PINUS PONDEROSA doesn't thrive well here, but they have nice young plants of the weeping variety, grafts from Peekskill-on-the-Hudson.

PINUS DENSIFLORA, parviflora, Bungeana, excelsa, inops, rigida, Banksiana, Jeffreyi, Scotch, Austrian, white, etc., are all planted on high ground, and monticola, Lambertiana, edulis, aristata, Murryana and some others in sheltered places.

HOLLIES NOT FRUITING.—All kinds of hollies are planted in pairs to insure a crop of fruit.

WISTARIA FRUTESCENS VAR. MAGNIFICA was larger in all its parts than the typical form.

WISTARIA MULTIJUGA is the very long racemed species from Japan which we so often see in pictures but so seldom in our gardens. Both the blue and white flowered forms were in bloom in the Arboretum, indeed, the white was one of the most attractive plants I have seen for many a day. It was a big plant and strong, and trained up a pillar around which its 2 feet long racemes hung straight down like a heavy fringe. The Japanese, in order to display the racemes to their best advantage train out the vines arbor-top fashion to long horizontal bars, the vines and foliage keep close to the bars, and the flowers hang straight down and are seen to fine advantage.

ROBINIA BESSONIANA.—This was in full bloom and one of the prettiest little trees on the place, it was only about 5 or 6 feet high. The branches were spreading at top, and hung full of racemes of pale rose colored pea flowers like those of an extra fine clammy locust (R. viscosa). It is thornless, and said to be a garden form of the yellow locust (R. Pseudacacia).

STEPHANANDRA FLEXUOSA is a Japanese shrub nearly allied to the spiræas, and of which a good deal has been made lately. It was in full bloom. The shrub is about 4 feet high with wiry arching or spreading stems and branches, pinnate leaves, and small white flowers in small, airy, corymbose panicles. Quite a pretty shrub in its way but not striking. Not showy enough for small gardens.

SYMPLOCOS PANICULATUS NOT FRUITING.—Passing along with Mr. Dawson and Professor B. M. Watson, I mentioned to them that our plants of this forgot all about their fruiting lesson; they gave us lots of blossoms but no berries. "That's because they are lonely", they replied, "get another plant or two and set them out alongside of those you have, and the fruiting business will be all right. Proper pollenation is what they need to form berries." The plants of it in the Arboretum were, they assured me, in September, every year, completely covered with ultramarine blue berries.

NUTTALLIA CERASIFORMIS is a Californian shrub very seldom seen in cultivation hereabout. But at the Arboretum I found quite a large specimen of it in fine health. Its flowers are greenish white, quite fragrant and appear very early in spring, in fact, in the time of crocuses, snowdrops and mezereon. It also starts into leaf very early, and not infrequently gets nipped with late frosts. Because of its grateful early flowers it is well worth growing.

ARALIA SPINOSA, true.—"Now that's the genuine Hercules' club of the south," said Mr. Dawson, "we sent down into the wilds of Tennessee to get it true, for the most of the aralias sold as spinosa are nothing other than the Asiatic Chinensis."

GORDONIA ALTAMAHA (pubescens).—I was surprised to see a fine bushy plant of this, the Franklinia of the south, in fine condition in a shrubbery bed in the Arboretum; it was bigger and stronger than anything we have at Glen Cove. It blooms beautifully every season in the late summer and early fall. Its relative, G. Lasianthus, or as it is known in the south, Loblolly bay, isn't hardy at all at Boston.

CALLICARPA PURPUREA.—Mr. Dawson tells me it isn't very satisfactory as an outdoor shrub about Boston, the season isn't quite long enough for it. Friend Temple in Iowa, however, gets over this by growing it as a pot plant, and when it is in full fruit at chrysanthemum time selling the plants for $5 apiece.

PHOTINIA VILLOSA.—This is a very beautiful and neat Japanese shrub now in good bloom. The flowers are white and borne in corymbs like the white hawthorn; the leaves are 1½ to 2 inches long, thick and prominently veined, and the plant, especially the young growth, is covered with a dense pubescence. There is also a smoother variety. Both, particularly the smooth one, bear ornamental scarlet fruit in fall; the leaves also assume a scarlet hue. This shrub is worth our nurserymen's attention for it is a good thing and there's a bright future ahead of it.

HAZELNUT TREE DISEASE.—Mr. Dawson called my attention to the way in which their hazel plants were dying off, sometimes in branches and sometimes the whole plant. It appears like a lot of excrescence blisters all over the bark. Within the past two years this same disease has played sad havoc in our plantation at Glen Cove, and last year and this our bushes have been killed back pretty hard with it. But I believe if we would let more young wood grow up from the root every year than we do and reduce the old wood our plants would be healthier. This is contrary to stereotyped advice, however.

BALSAM FIR GOT WINTER KILLED.—Prominent among the handsome spruces and silver firs I noticed a group of much browned or dying plants. "What's the matter there, Mr. D.?" I inquired. "Now that's something curious," he replied. "They are balsam firs, the hardiest of all our conifers, and see they have suffered the most. What injured them I can not say, but probably the dryness of the ground was the primary cause."

FRASER'S BALSAM FIR (Abies Fraseri), indigenous to the high mountains of Tennessee and Carolina makes a far prettier tree than the northern balsam, and seems to be hardy enough here.

THE WESTERN LARCH (Larix Occidentalis) doing well.—We have tried and rejected the western larch because it refused, under any cultural conditions, to thrive with us. But here at the Arboretum on sloping ground it is growing beautifully and looks happier than the eastern hackmatack. How is this, Mr. D.? I asked. "They are all grafted on the Japanese larch, L. leptolepis. They won't grow with us on their own roots any more than they will with you, but grafted on the Japanese or European stocks they thrive first rate and make beautiful trees. I used the Japanese larches as stocks just because I had them ready at the time."

POLLARDING OAKS and other trees.—As one may find in any piece of old woodland, especially near a city, the big trees had many dead and broken branches. The dead and broken branches have been cut out altogether, and even the living branches have been shortened to within a few feet of the trunk. As soon as the branches were cut off the wounds were painted with tar. This was some years ago. The result has been wonderful. The stumps have put forth fresh branches with leaves as big and fat as those of saplings, and these branches are waxing in size and strength year after year, so that now the pollarded hard wood trees of a few years ago are clean well branched healthy specimens. Professor Sargent is proud of them.

RHODODENDRONS AT BOSTON.—It was most 9 p. m., closing time, when Jackson Dawson and myself got in to Boston to see the rhododendron show, and found that most all the boys had gone home, for the Boston boys are model boys. But we found James Comley there. He had a fine lot of flowers. "Now, Mr. Comley," I said, "please tell us how you get such big flowers and big heads and fine foliage." "Well," he answered, "I feed the plants well. We give them lots of old rotted cow manure and leaf mold. It's all a mistake to think that rhododendrons don't like something good to eat; that's how I treat them, and there are the flowers to speak for themselves. Then don't let the plants flower themselves to death. Pinch off half the flower heads as soon as they set, it will pay you in the large size of the blooms left and the health of the plants. In some cases I run two sets of plants, letting one set bloom this year and the other next year, and so on, and it pays. Take the variety Everestianum for instance, perhaps the best all round hardy rhododendron in existence, and see how sickly the plants often appear; well, this is caused by nothing other than overflowering. Try it every alternate year and disbud half its crop the bearing year and you'll get something nice I can tell you."

WM. FALCONER.

Fruit Sulphuring.

At the June meeting of the California State Hort. Society at San Francisco Leonard Coates, of Napa, read a paper on "Sulphuring fruit: Is it likely to benefit or injure California's reputation?" Mr. Coates declared himself perfectly impartial as to the merits of the question one way or another, but his conclusions, drawn not only from the scientific but the severely practical phases, led him to the unequivocal judgment that sulphur-

ing fruit in the drying processes is all wrong, and will prove as damaging to the industry as doctoring with deleterious spirits and coloring stuffs has proved to the foreign wine trade. Tests prove that the pure and natural qualities of the fruits have been injured in the sulphuring process, that the rich flavor of the fruit has been destroyed, and that while the white healthy color has been preserved the taste has been nearly destroyed. The point was made that producers of dried fruit for the market are catering to the dollars and cents side of the question, while sacrificing California's credit and fame as the producer of pure and healthful fruits.

KANSAS CITY.—The Western Wholesale Nurserymen's Association held a meeting here June 21 but the attendance was not large. President H. T. Kelsey of St. Joseph, presided, and Mr. U. B. Pearsall of Fort Scott acted as Secretary. From a careful comparison of notes, the members present drew very discouraging conclusions regarding the Missouri fruit crop. The crop is very light and is a total failure in several kinds of fruit. The grape crop is the most encouraging of all and promises a pretty fair yield. Apples will not give more than one third of a crop and of inferior quality. The only peaches in the state are at Olden and the peach crop may be set down as a practical failure. Cherries and plums are a total failure. The investigations of the situation in Kansas were not as thorough, but it is not thought the crops are in quite as bad condition as in Missouri, although it will not be a typical Kansas yield. The poor prospects were attributed to the late frosts and excessive wet weather.

LOS ANGELES, CAL.—A meeting of the horticultural commissioners of the six southern counties was held here June 2. The chief point of discussion was the adoption of uniform regulations in relation to the inspection of nursery stock. The commissioners expressed themselves as ready and willing to accede to the desires of the nurserymen as far as possible in regard to agreeing upon a specified formula for an emulsion for dipping trees, which dip should be used uniformly in the six southern counties, and where gassing was preferred the strength of the chemicals to be employed and duration of treatment.

COLUMBUS, O.—The Ohio Horticultural Commissioners for the World's Fair exhibit met here recently and consulted with wine growers from Sandusky and other points in Ohio. The Commission consists of Hon. N. H. Albaugh of Miama county, Chairman; Prof. W. R. Lazenby of the O. S. U. and Mr. N. Ohmer of Dayton. They have the expenditure of $8,000 for the Ohio Horticultural exhibit, the second largest amount appropriated by any State in the Union. They will endeavor to make the wine display from Ohio exceed that from California at the World's Fair.

ROCHESTER, N. Y.—Articles of incorporation of the Allen Nursery Co. have been filed. The capital stock is stated as $10,000, divided into 400 shares of $25 each. The place of business will be in this city. The incorporation is for 30 years. The names of the directors and the number of shares subscribed for by each are here given: William S. Linton, Saginaw, Mich., 70 shares; B. Frank Allen, Rochester, 85 shares; Charles H. Hawks, Rochester, 25 shares; Jessie M. Allen, Rochester, 5 shares; Arthur A. Mosher, Jackson, Mich., 30 shares.

BOISE CITY, IDAHO.—Articles of incorporation of the Arid Nursery Co. have been filed. The object of the company is to establish and maintain one or more nurseries in Ada county. The principal place of business is Boise City and the capital stock $50,000, all of which is subscribed. The incorporators are Joseph Pinkham, W. H. Pettit, Charles E. Snyder, Fremont Wood and Ada Bush.

IN CONSEQUENCE of the appearance of the phylloxera in California, the Minister of Agriculture of France has decided, in accordance with the terms of the Conference of Berne, May 15, 1882, that under no circumstances whatever shall vine cuttings or plants from North America be permitted to enter France.

WALLA WALLA, WASH. — The State Board of Horticulture met here June 1 and 2 and matured plans for collecting a complete exhibit of this years' fruit for the display at the World's Fair.

DO YOU WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

SITUATIONS. WANTS. FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By an experienced florist and rose grower. Address
O B 100, care American Florist, Chicago.

SITUATION WANTED—By a German, good grower of roses, carnations, violets, etc. Long practice and good reference. Address
C S, Box 1167, Meriden, Conn.

SITUATION WANTED—By young man, 6 years' experience in growing roses, carnations, chrysanthemums and bedding plants; temperate and of good character. Address with particulars
Box 269, Decatur, Ind.

SITUATION WANTED By a first-class florist; German; single; 29 years of age; experienced in growing roses, carnations and cut flowers. Best of references. Address C W,
P O Box 219, Minneapolis, Minn.

SITUATION WANTED—To take charge of department, or as general foreman; good all round plantsman; well up in the raising of ferns, stove plants, cut flowers, etc. Best of references. Address
H. WESTON, 17 Ward Ave., Newport, R. I.

SITUATION WANTED By a young man, age 26; great experience with orchids and all kinds of exotic plants Single. Either private or commercial. Good references. Address ORCHID GROWER,
Oasis Nursery Co., Westbury Station, L. I.

WANTED—Boiler (cast) to heat 4 000 feet of glass. Address CHAS. POMMERT, Greenfield, O.

WANTED Partner; single man to take half interest in greenhouses. All new. 5,000 ft of glass. Address J SIMPSON, care American Florist.

WANTED—Man; must understand inside and outside work; industrious, and has to be a good worker—no other need to apply; steady place.
G. HEINRICH, Crete, Ill.

WANTED A reliable, sober and pushing man (single preferred), who knows all about raising cut flowers, roses, carnations and violets. Address
PITT, care American Florist, Chicago.

WANTED—On a commercial place, single man as assistant—German-American preferred. Address, giving age, recommendations and wages required, C. HORNUNG, Edgely, Bucks Co., Pa.

WANTED—At once, a good man to take charge of cut flower store, one who understands growing roses and carnations preferred; must have good references. Address with wages desired,
P. O. Box 783, Columbus, Ohio.

WANTED A foreman well acquainted with propagation and growing of bedding plants. Must be well recommended. Good salary and steady work. Address A. E. WOELLERT,
Gardener to P. R. R. Co., Altoona Pa.

WANTED A man to take charge of a commercial plant of 14 greenhouses, to grow mostly cut roses and small rose plants. Prefer married man. Must have good references others need not apply. Address LAROCHE & STAHL, 1235 Chestnut St.,
Philadelphia, Pa.

WANTED—Roses, chrysanthemums, carnations bouvardias, pileas, ferns, alyssum, heliotropes, rose geraniums, smilax, etc. Send samples by mail; will buy only clean, strong stock. Address
WM. SMITH, 216 9th St., Sioux City, Iowa.

WANTED—A strictly sober, competent and reliable man; a good rose and general cut flower and plant grower; one competent to manage a set of commercial greenhouses. Apply with references to
CRABB & HUNTER, Grand Rapids, Mich.

WANTED—By July 15th, experienced rose grower to take charge of five rose houses; married man; must be sober, well recommended and understand his business. Address
F. BURKI, Bellevue, Allegheny Co., Pa.

WANTED—Thoroughly efficient man as foreman in greenhouses; over 10,000 feet of glass; only place in large western city; demand exceeds supply; extension needed. Man with small capital can invest, taking an interest. Address at once
Box 40, care American Florist, Chicago.

FOR SALE—Greenhouses and stock. For particulars, address
W. S. SAWYER & Co., Lincoln, Neb.

FOR SALE—Only greenhouse establishment in growing western city of 15,000 inhabitants; 3,000 feet of glass; large stock. Address
THORP, Florist, Trinidad, Colorado.

FOR SALE—At a bargain, a florist's business in a thriving city near St. Paul Proof, profits for 1891 over $1,300 For particulars address
SELLER, care American Florist, Chicago.

FOR SALE—Three greenhouses, in a good location most suitable for an enterprising florist to make money. Business correspondence promptly answered. JOEL ROE, Colorado Springs, Colo.

FOR RENT—Five brick greenhouses, already stocked; one 20x40, three 20x60 and one 13x30, with 6-room brick dwelling, nicely located in city of 65,000. Address C. G TURNER,
1513 Franklin St., Wilmington, Del.

FOR SALE—Steam thresher boiler and 12-horse power engine, in good repair; will carry 100 lbs. of steam. Just what you want for heating greenhouses, running pumps, saws, etc. Discarded on account of being too small for heavy work. A bargain for someone. Address
R. DAVIS & SONS, Morrison, Ill.

FOR SALE—Rose growing plant containing 25 000 square feet of glass, with property, situated 25 miles from New York City; stock and houses in A1 condition; plants are growing for next season's planting, mostly Am. Beauty and La France. Will sell on easy terms. Address
ROSE GROWER, care American Florist.

FOR SALE.

Nine greenhouses, containing about 16,000 feet of glass, ½ best double glass; all houses rebuilt 4 years ago; heated by hot water—use city water for watering—2 acres of land, 1 brick dwelling house with 8 rooms, 1 frame house of 4 rooms, stable, horse, harness, wagon, etc. The above property is located in one of the best commercial cities of the west, with a population of over 60 000, and within 1¼ miles of city hall; electric cars pass every 6 minutes direct to city hall and Union depot. The greenhouses are well advertised and enjoy a good patronage at home and from abroad, and now contain a good stock of cut flowers, decorative and bedding plants. Poor health causes owner to retire from business. Would also be willing to sell greenhouses and stock and lease grounds and one dwelling house for a number of years, with privilege to purchase at a fixed price when lease expires. A bargain to a man with small capital. Address BUSINESS,
care American Florist, Chicago.

WANTED.

Twenty large EUPHORBIA SPLENDENS. Name size and price.

SALZER SEED CO., LA CROSSE, WIS.

Mushroom Grower and Florist: Competent man open for engagement; 27 years' experience in mushroom growing. Can take full charge. Best of references. For further particulars, address J, care Jno. Gardiner & Co., Phila., Pa.

OWING to a mistake on the part of the P. O. Department at Boston certain mail matter addressed to one of our advertisers, the Bay State Hardware Co., 272 Freeport street, Boston, has been returned to the writers with the statement that there was no such street in the place named. Freeport street was formerly Commercial street, Dorchester, and the recent change in the name had not come to the notice of the P. O. Department. Hereafter there will be no trouble.

THE COMMITTEES of the horticultural division of the World's Congress Auxiliary of the World's Columbian Exposition have issued a notice urging all interested to so arrange their plans as to visit the exposition during September, 1893 so as to attend the sessions of the Congress.

THE Ohio Experiment Station, Columbus, O., is advertising for bids for the erection of seven greenhouses on its grounds near Wooster, O. Proposals will be received until July 8.

The Seed Trade.

Foreign Seed Exhibits at the World's Columbian Exposition.

Information detrimental to the Horticultural Interests of the World's Columbian Exposition having been received by Chief Samuels, the following resolution relating thereto was adopted by the American Seed Trade Association at their Hartford Convention:

Hon. J. M. Samuels, Chief of the department of Horticulture, Chicago, Ill.

DEAR SIR:—The Communication of Frank H. Mason, Consul General of the United States at Frankfort on the Main, bearing date of June 2, 1892, in which he states that certain threatening letters have been sent by parties in this country tending to prevent exporters of seeds in Germany making an exhibition of their products at the World's Fair in Chicago was presented and it was, Resolved, That the American Seed Trade Association in convention assembled heartily deprecate any such course, that none of its members have ever participated in such a movement and express a hearty desire to have the fullest representation of the products of the world as relating to their business exhibited at that time.

A. L. DON, Sec'y. J. C. VAUGHAN, Pres.

REPORTS from pea and bean growing localities in Canada are that the season has so far been very unfavorable for peas. Early hardy sorts such as First and Best and Alaska are standing the wet weather well and look now as if they would give very fair returns, but wrinkled peas, American Wonder, Gems and Strategem are in very bad shape. The stand was very light in the first place and since, owing to much rain, the wrinkled peas did not come well. The vines are turning yellow and unless the conditions improve greatly from now out the shortage will be great on nearly all wrinkled varieties and there can not be a full crop on early smooth sorts. Beans are planted very late this spring, many lots having but just been put in the ground. With a favorable season a full crop is hoped for, but the usual early frosts in fall may catch the crop immatured, so it is impossible as yet to predict the result.

WINONA, MINN.—Aug. Sellentine at Youmans Bro's. greenhouses has as fine a lot of young chrysanthemums as can be found anywhere. Edward Kirchner will build a carnation house 75 x 10. His La France roses are exceptionally fine. Woodlawn Cemetery will build a three-quarter span rose house 75 x 18, this summer. Business fine; demand for cut flowers far in excess of the supply.

AURORA, ILL.—An attempt was made recently to set fire to R. Saunders' greenhouses. The attempt failed of success owing to the woodwork being wet and the only damage was the loss of several hundred plants from the smoke generated by the oiled rags and paper that the incendiary stuffed through a broken window and lighted.

JANESVILLE, WIS.—Spring trade in plants fully up to the average. Memorial Day trade larger than ever, mainly owing to the scarcity of out-door flowers. Greenhouse flowers plenty and sold well; orders all filled and flowers all gone at noon. The sweet girl graduate is now receiving our attention.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

Send for our Catalogue and Special Trade List to dealers. Mention this paper.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

EVERY FLORIST IN THE LAND

Should have a good bed of the New Giant Forcing

DAISY SNOW CREST

Introduced by Mr. H. A. Dreer.

We are Headquarters, and have 20,000 plants to offer at $1.50 per doz.; $10 per 100; $80 per 1000. It is easily and rapidly propagated by cuttings and division, and **NOW IS THE TIME** to get up a stock for fall planting. It is double the size of Snowflake and vastly superior in every way. Many of the blooms were larger than a silver dollar as we grew them last winter. It is a free and constant bloomer, requiring the same conditions as violets.

We also have a heavy stock of **Snowflake** that we wil close out at $1.50 per 100; $12 per 1000, for the next three weeks.

Yours very truly,
J. C. GIBSON, Woodbury, N. J.

EXTRA PANSY SEED.
Mammoth Sunbeam Strain.

A grand collection of giant flowering varieties, very large, of perfect form, and choice colors; carefully selected; receive high praise from my customers. Every florist should be sure to sow it. Trade pkt. 500 seeds, 25 cts.; 3 pkts 60 cts.; 6 pkts. $1.00.

JOHN F. RUPP, Shiremanstown, Pa.

Toronto.

All the retailers I have seen seem to be pretty well satisfied with the late defunct plant season, but the wholesale growers are a little in the dumps and one can scarcely wonder at it, there is not much money in boxes of annuals (15 or 20 in a box) at 60 cents a dozen, or geraniums at $4.50 the hundred, and so on all the way down the list.

The meeting of the Gardeners' and Florists' Association was very well attended in spite of the weather being threatening and very hot. The discussions were short, lively and to the point. Two new members were elected and three nominated. All the business new and unfinished was disposed of before 10 o'clock and the boys got home early, at least it is to be hoped they did.

At an after meeting held near by the Washington convention and other things not eaten with a knife and fork were discussed and it was thought that the Toronto (and vicinity) contingent would amount to about 20 souls. I endeavored to impress on those present the necessity of sending in their photos to the FLORIST or they might be taken for Senators while at the Capital, which might make things more expensive.

Mr. Hollis had another seedling carnation at the meeting with a stem like a corn stalk and a flower as big as a hollyhock (more or less). Mr. H. is bound to make his mark as a carnation hybridizer.

Talking about big flowers reminds me to mention a big chrysanthemum story told by Mr. Geo. Vair at our last meeting. A Japanese gentleman, and a reverend gentleman at that, told him (Mr. V.) in the course of a conversation on chrysanthemums, that they grew flowers in Japan as large as the space made between two mens' arms joining hands. This beat Thorpe's ideal into a cocked hat and some of the members seemed to be of the opinion that either Mr. Vair or the reverend gentleman was stretching things somewhat, but Mr. V. promised at the next meeting to bring the r. g.'s sworn statement as to the facts of the matter. Perhaps some of your readers may have heard this already and can vouch for the truth of it, and if so, perhaps it would interest other readers to tell them all about it. E.

I. FORSTERMAN,
NEWTOWN, L. I., NEW YORK.

PANSIES.
AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.
That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.
If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.
With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.
Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.
L. B. 338. ALBERT M. HERR, LANCASTER, PA.

ILLUSTRATED FLORISTS' CATALOGUES AND PRICE LISTS,
At the same price as is usually charged for printing without illustrations. We are Specialists in HORTICULTURAL PRINTING. Artistic and first-class work in every particular. No "kid glove" at any price. We do all our own work barehanded, and under our own personal supervision. No charge for illustration of any standard plant or flower.
Send for estimates on what you need. You will be pleased with our prices.

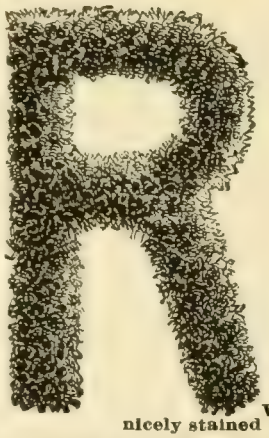
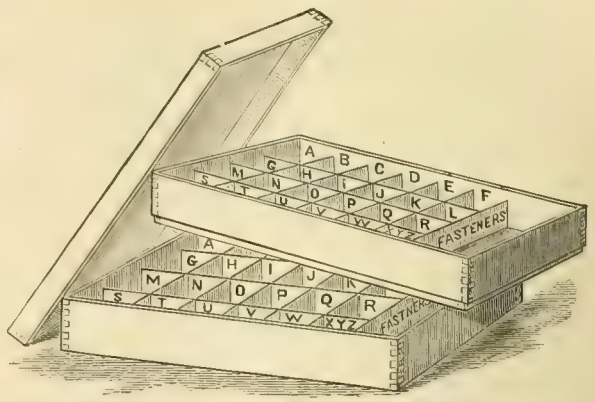
June Exhibitions.



PROVIDENCE, R. I.—The June exhibition of the R. I. Horticultural Society was held on Tuesday, June 21. The number of exhibitors was very large and the prizes for roses, strawberries, etc. well competed for.



NEW BRITAIN, CONN.—The rose exhibition of the New Britain Horticultural Society on June 21 was a pronounced success. The society now has a membership of 125.

SPRINGFIELD, MASS.—There was a beautiful display of roses, laurels, tuberous begonias and hardy herbaceous flowers at the seventh annual exhibition of the Amateur Horticultural Society which took place in Union Armory on June 21-22.

HOLYOKE, MASS.—The first show of the recently organized Horticultural Society at Unity Chapel on June 22-23 was a great success. There were superb collections of roses, geraniums, lilies, palms and strawberries and much enthusiasm was manifested by the visitors. The society already boasts a membership of 169.

THE Hampden County Horticultural Society has distributed to the school children of Springfield, Holyoke and Westfield, Mass., nearly 5,000 chrysanthemum plants. The object is to stimulate a love of horticulture among the young, and any school child between the ages of 8 and 15 is entitled to plants.

With an order for 500 letters, we furnish a box made of wood, nicely stained and varnished, such as is represented in the cut.

UPLAND GREENHOUSES. MADISON, N. J.

Short Hills, N. J.

The United States Nurseries Base Ball nine defeated the Alerts of Milburn, N. J. on Saturday, June 18th, by a score of 18 to 15. The Nurseries nine is composed of employes of Pitcher & Manda, and this being the first game of the season their victory was gratifying and more especially so as the Alerts are considered "good wood." It is singular that more nines are not started up among the florists; much sport could be derived and it is healthful exercise. The amusing feature of Saturday's game was W. S. Rogers as Mascot, attired in a tight fitting linen duster, the back of which had an artistically painted sign upon it, and having a silk hat of very ancient birth for a headgear. Nor was the Mascot forgotten when with victory they paraded the streets homeward bound.

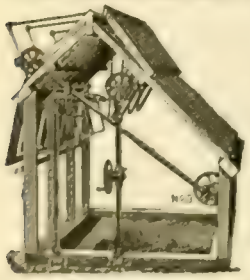
The nine would like to hear from any other nine in the trade and games can be arranged by addressing the manager, Jos. Manda Jr., Short Hills N. J.

MAJOR ROGERS.

Hartford, Conn.

The summer exhibition of the Hartford County Horticultural Society took place on June 16 and 17 at Good Will Hall. Roses were the main feature of the show, splendid collections coming from Stephen Delbar, gardener to Gov. Bulkeley, Chas. P. Lincoln, A. H. Tillinghast, A. N. Pierson, of Cromwell, and others. There were meritorious displays of Sweet Williams, sweet peas, pæonies, etc., besides strawberries and early vegetables. On Wednesday evening Miss S. J. Smith delivered an interesting lecture on "Women in Horticulture."

Fancy Caladiums and Curculigos.



In the FLORIST for June 16, page 1024, mention is made of fancy caladiums as growing well only in shady places. They have been bedded out in full sun here in Anniston and have done splendidly. I have a bed of over 200 plants in fine colors.

The same reference has been made to Curculigo recurvata. I have one, used as a center plant in a tub, exposed to the full sun all day.

F. J. ULBRICHT.

IF YOU have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

Flowers At June Weddings.

BY. H. H. BATTLES IN LADIES' HOME JOURNAL.

I once heard a man about to be married earnestly ask the advice of a friend as to the most suitable necktie for the bridegroom. The friend laughingly replied: "My dear fellow, that is of not the slightest importance. You need give yourself no uneasiness. Nobody will look at you. Of course, it is necessary for you to be there, but I assure you the interest of the occasion centers in and around the bride." The truth of this cannot be questioned, and the little belongings necessary to a bride are, therefore, of importance.

FLOWERS FOR THE BRIDE'S BOUQUET.

The bride's bouquet should always be made of white flowers. In England eucharis, gardenia, orange blossoms and stephanotis are frequently used; with us, very seldom. The most fashionable bouquet in America consists of white orchids, lily of the valley, or of white roses, following in the order named. Lily of the valley is frequently mixed with either orchids or roses, but orchids and roses are seldom used in the same bouquet. They are rival queens that are happiest apart. A pretty idea to arrange the bride's bouquet is to have it composed of several sections, that after the bride leaves the house the maid of honor may distribute to those friends whom the bride may wish to honor. The ribbon can remain on the section intended for the bride's mother. At times the bride has a favorite flower, or there may be a bit of romance or sentiment attached to some colored flower, such as a violet, or a jacqueminot rose, and she wishes this included in her bouquet. When they are used let it be a small bunch, partly concealed. After the reception it may be taken from the bouquet and worn on the traveling dress. The ribbon for the bouquet should be either three yards of three-inch ribbon to match the gown in tone and texture, or twenty or thirty yards of very narrow ribbon, with long bows, the ends extending down at different lengths, with delicate flowers attached to a number of these ends. Sometimes a large bow of ribbon is tied and arranged as though it were coming from the center of the bouquet. The ribbon thus used has no meaning, and is very apt to become soiled by the moisture on the flowers.

THE BRIDAL PRAYER-BOOK.

Some brides desire to carry a prayer-book in order to have a lasting souvenir. That there may be some personal association with flowers on that day, a few can be held in the prayer-book, and to prevent the stems and foliage from soiling the book the stems can be protected by silver foil or waxed paper.

THE MAID OF HONOR'S BOUQUET.

The bouquet carried by the maid of honor depends entirely on the complexion. If she is a decided brunette, there is nothing better than a big bunch of Jacqueminot, or Ulrich Brunner roses. If a blonde, let it be the delicate pink Catherine Mermet, or Mrs. John Laing roses. The arrangement of her bouquet should in some way differ from those carried by the bridesmaids.

FLOWERS FOR THE BRIDESMAIDS.

There are a number of pretty and effective ways that flowers can be arranged for bridesmaids. The conventional way is to make a round bouquet, arranged carelessly, using the foliage of the flowers of which the bouquet is composed. As the bride's bouquet is always white, those carried by the bridesmaids should, as a contrast, have some color. If the bride in choosing her attendants, has been fortunate enough to secure decided blondes and brunettes, strong and beautiful color contrasts can be obtained in both gowns and flowers. The flat cluster, or "rustic bunch," is often used. In arranging such a cluster it is wise to have it arranged carelessly, or rather not to interfere too much with nature. The effect should be as if the hand that carried the flowers was the one that gathered them, with no thought of arrangement. The flowers should have long stems and be allowed to fall as they will.

Baskets of various shapes filled with flowers are often used. Leghorn hats, drawn together in the shape of a basket, are among the prettiest arrangements. Draw the ribbon around the center, and tie a loop and bow on top. This can be carried either with the arm through the loop, or as a basket in front. The flowers in this case should be arranged very loosely, not only giving the impression that the hat is full, but flowers tumbling out.

The most picturesque arrangement for bridesmaids to carry is the "Directoire stick." These sticks are about five feet long, made of wood, either polished or covered with silk or celluloid, with a knob on top and a large bunch of flowers fastened with a bow of ribbon about a foot from the knob. A noon wedding in the country is the most appropriate at which to use these. Old-fashioned and picturesque gowns and leghorn hats add very much to the effect.

PAGES AND THEIR DUTIES

No fashionable bridal party is complete without little children acting as pages. Many little duties can be assigned to them. If ribbon is used across the aisles, they can be stationed there to lift it as the ushers pass. One of the pages can hold the bride's bouquet while the ceremony is being performed, another can carry a plush case for the prayer-book, if the bride wishes to use one, and, finally, they can gather up the ribbon, if it has been drawn the whole length of the aisle. As to the flowers these little folks should

wear, much depends on the sizes and costumes. If very little fellows dressed in white, get as large a rose as possible, a Baroness Rothschild, or an Ulrich Brunner. Let the stems be fully eighteen inches long, and pinned diagonally on the breast with all of its beautiful foliage. If lads of between twelve and fifteen, let them wear large buttonhole bouquets of some strikingly contrasting color to their costume. If little girls are to do the honor as pages, or maids of honor, let them carry very large or very small baskets: the smaller the child the larger the basket.

THE GROOM, BEST MAN AND USHER

The groom should wear a buttonhole bouquet, not very large, made of the same kind of flowers as the bride's bouquet—possibly one rose and two or three sprays of lily of the valley. One white orchid, if this be very small, and several sprays of lily of the valley are very effective. Gardenias are much sought after, and have been the favorite flower in London for wedding boutonnieres for a number of years. Six sprays of lily of the valley also make a very pretty bouquet.

The best man should wear a larger bouquet than that worn by the groom, made of the same kind of flowers as the maid of honor carries. The ushers should wear very large, white bouquets—four carnations is none too large, often as many as six are used. Either twelve sprays of lily of the valley, or six sprays of Roman hyacinth, arranged compactly, make a pretty bouquet.

The mother of the bride can either wear or carry a cluster of flowers that will harmonize with the gown that she wears. If it be a formal wedding, to carry the cluster is preferable; it should be a little smaller than the bouquets carried by the bridesmaids. If the bride has sisters, and should they not be of the bridal party, let their bouquets be decidedly different from those carried by the bridal party. The Father of the bride should wear a boutonniere much similar to that worn by the best man.

DECORATIONS AT THE RECEPTION

Several tall palms placed at the entrance of the house make an effective entree. These, with their graceful foliage, are combined so as to form an arch eight or ten feet high. It is then necessary to decide what is the most conspicuous point in the hall which the eye rests upon; make some effective grouping of palms here, massive if the space permits. The newell post is a feature that should be carefully considered, and made as effective as possible. Never put greens on the banister rail, as they interfere with its use in going up and down stairs. Unless the stairway is very wide, the outside is the most effective place. A line of laurel wreathing under the rail, with festoons of smilax caught up with several carnations, is very pretty. If you use wire in fastening the greens, see that no ends stick out that may endanger the gowns of the guests. All the mirrors and chandeliers should have attention. Pretty effects can be had with festoons over doors and arches. A few of the very choice flowers on the dressing case in the ladies' room is in good taste. In the reception room is where the most beautiful effects should be studied. The end of the room in which the bridal party receive should be literally made a bower of flowers. A large canopy of white flowers is generally arranged over the place where the bride and groom receive. This can be made a work of art in the handling of delicate flowers. On either side of this, and extending from the ceiling to the floor, should be large curtains of asparagus or smilax, caught back with a band of flowers. The mirror over the mantel can be framed with flowers. Two beautiful vases on the mantel can be filled, one with exquisite orchids, the other with long stemmed hybrid roses. The floral decorations in the room where the refreshments are served depends entirely on the size of the apartment. Often in country homes the porch is enclosed with canvas or boards; these are covered on the inside with evergreen trees, laurel branches, or what large and effective greens can be had. The most valuable and inexpensive green called wild smilax has recently made its appearance from the south. With it you can produce effects which would be impossible to obtain with any other greens that are now on the market. It comes in long, beautiful sprays; all that is necessary for you to do is to hang it up; nature has arranged it for you. The porch thus enclosed and decorated, small tables placed there in addition to those in the dining-room, a few flowers, possibly wild ones, arranged in dainty receptacles on each table, are touches that are always appreciated. In city houses, where the dining-room only is used, the table is simply used for refreshments. On this table some high arrangement of flowers should be placed. It is not practicable for anybody to sit at it, consequently the escorts and waiters serve the ladies in different parts of the house. A very sensible fashion at formal noon weddings is to have a separate room where the bridal party may breakfast. In addition to the bridal party, if there be distinguished guests, or those from a great distance, they can be included in this party. Nothing but green and white should be used in this room. The table decorations should be most delicate and dainty. Low effects only should be used, as there should be nothing to obstruct the view at the table as the bridal party are seated.

CHURCH ORNAMENTATIONS

The interiors of churches differ so much that it is difficult to lay down rules that will apply to all. If the interior of the church is constructed of natural wood, and the chancel decorated with dark colors, laurel wreathing is the best, and the broad-leaved Latania borbonica is the most suitable palm. If the interior is more delicate in form and color, the finer and more graceful palms, such as Areca lutescens and Cocos Weddelliana are desirable, while for garlands smilax or cultivated Asparagus plumosus are the most appropriate. In placing the plants the idea to have a background for the ligter colored costumes should be borne in mind. Care should be taken not to obstruct the view, and an unobstructed passage from the vestry-room must of course be left. The font should be filled with large, white flowers; a few palms can be used with good effect on both sides of the aisles. Tall ones are placed so that they may form an arch, and they do not obstruct the view of the guests too much. A pretty way to designate the front seats, reserved for the families of the contracting parties and guests of honor, is to tie large clusters of flowers on the ends of the pews thus reserved. Another and more common way is to have broad ribbon, with balls or baskets of flowers on each end; this is drawn across the aisle with the ends thrown over the pews. Another pretty and useful way to use ribbon is, after the guests have been seated, to have the ushers or little pages draw the ribbon the whole length of the aisle, resting on the top of each pew. This serves as a gentle reminder, as well, that it is the wish of the bride that the guests remain seated until after the bridal party march out.

Some Retail Notes.

Among bedding vines seen this summer are several of the passifloras, which seem a decided success. One strong and rapid grower, P. Forbesii (?) bears large and showy blue flowers; it makes a fine appearance in company with the lophospermum, which is now covered with its handsome rosy flowers.

Cuphea platycentra, (syn. C. ignea) forms a little variation in veranda boxes or similar situations especially when planted for immediate effect. Neat, well bloomed plants are quite salable in pots. The newer Cuphea Llavæ, with its oddly colored flowers, though not yet sufficiently known to be popular, should be satisfactory for similar uses.

Neat little plants of lemon verbena, pinched back to form a bushy habit sell as a pot plant in the autumn. Planted in a box or bed this plant is very handy for cutting; its perfume always makes it popular.

Another of the old stand-bys we find most popular in retail trade is the bouvardia. Nice, symmetrical plants in pots sell well for use in the house during winter. After the bedding trade is over the retailer finds it advisable to get up a stock of pot plants for winter use; in many localities the sales are large in this line. Where people have little conservatories we notice quite an increased demand for winter hanging baskets, which are filled with much the same class of stuff as those for summer use.

Shapely little dracænas, especially indivisa and terminalis are popular plants for conservatory use, sharing the popularity accorded to small palms. Again we find begonias in demand in the autumn, especially the rex varieties; they are always popular window plants. B. metallica is also admired, and can be very cordially recommended for the house. Winter window boxes of assorted plants seem to take very well in some localities.

Another of the popular winter plants is the abutilon, which a good many of our friends the amateuers call "Flowering maple." Plants in 4 to 6-inch pots seem the most salable, and the variegated leaf is usually preferred.

Several of the Chinese and Himalayan primulas will be found useful in a local retail trade. The ordinary double white Chinese is always a favorite, though not so much grown now as it was some years ago. We should make an exception, however, against P. obconica; it is pretty in its way, but rather risky to handle. For some years past the little English primrose has been fairly plentiful around New York, blooming about February or March, and these plants make a very attractive appearance in the florist's windows. Keeping them in the house the usual trouble is that the room is too warm; so long as they do not freeze a sunny window in a fireless room suits them far better than heat.

Ardisia crenulata is another retailer's plant for winter use; shapely and well berried plants are sold in very large quantities, especially around the holidays. It has the advantage, too, of staying in condition for a lengthy time; it is no uncommon thing for a second crop of berries to be maturing before the first is off the plant. Well-clothed plants in 4 to 6-inch pots are the favorite size. Some

FIELD OF IRIS IN BLOOM. TOKIO, JAPAN.

of the up-town florists in New York handle the ardisia in very large quantities. Care must be observed in keeping the plants clean; shabby foliage is ruin to its value. EMILY LOUISE TAPLIN.

Iris Kæmpferi.

The proper name is Iris lævigata. It is a native of Japan where it is made much of as a garden plant and holds a place in summer like what the chrysanthemum holds in fall. The Japanese people treat it as a sub-aquatic and grow it in large patches or fields for fine effect.

We treat it, as a rule, as a hardy herbaceous perennial and grow it in good, fairly moist ground, and it behaves admirably.

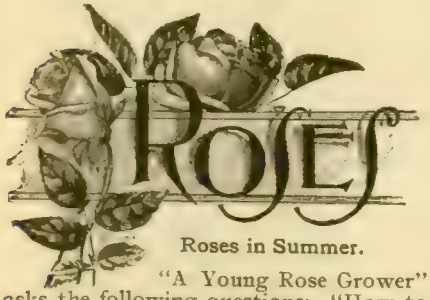
It is a splendid plant for florists to handle. It is hardy, very easy to grow and quick to multiply, and sure to give satisfaction to customers. It grows in tufted form like the common Iris Sibirica and not by spreading rhizomes like I. Germanica. In early spring these tufts may be lifted and divided into as many parts as practicable with roots to each division and replanted. It is better to do this in spring when the plants, having rested for the winter, are eager to rush into new life, rather than in fall when their tendency is to become dormant. If you divide in fall plant the divisions in frames, if in spring you can set the divisions right out into the open ground.

The plants are of upright growth, 2 to 4 feet high, and towards the end of June or early in July display their gorgeous blossoms. The flowers are waxy white, pale or deep blue, or purple of all shades, and are often marbled in a prettily variegated way. They are flat topped or partly drooping, 5 to 10 inches across and single, semi-double or double according to variety. While there are many named varieties, European and American raised, many of our finest sorts, as is the case with many of our finest chrysanthemums, have been imported from Japan and there is considerable confusion among the names of these varieties. When buying it is often as safe to specify particularly the color and style of flower you want as to order by name. Bear in mind also that the finest varieties are as robust as the poorest, and it is money in your pocket to get the very best, even if the first cost is greater, than to get indifferent sorts gratis.

These irises set seeds abundantly, and the seeds germinate well, and the young plants, with good treatment, bloom the second year. The flowers of all will be pretty, but you should retain the best only. You can not afford to give your customers anything of less merit than they would be likely to get from your rivals in business, rather strive to give them something better and ensure their perfect satisfaction and future patronage. WM. FALCONER.

Shipping Funeral Designs.

To pack a design is one thing and to have it arrive at its destination in good condition is another, therefore to secure the best results it is not only necessary to pack securely but to have the box or crate as light as possible and in such shape that it can be easily handled by the expressman.



Suppose that it is a pillow that is to be shipped: After the design is made take a close measurement over the flowers and then make your crate to fit it. For this purpose we use common plasterer's laths and ½ or ⅓-inch lumber in convenient widths, say 6 and 8 inch. Saw out your boards for the bottom of crate and then bind together with a lath at each end. Then use laths for the four uprights at the corners and for the top, then wrap the crate in heavy paper and you have a light and serviceable crate, one that will not be handled nearly so roughly as an ordinary box, and by binding it tightly around with heavy twine there is something to carry it by which insures greater safety and care. Have a roll of heavy paper, 40 or 50 inches wide, and you can cut it any length desired to fit the crate.

To fasten the design so it will not move when tipped or possibly upset, use No. 22 wire, attaching it to the wire frame and binding it down to bottom of crate, and to the sides when it is a standing piece. For very large pieces security will be added by using 1x2-inch strips in place of laths.

When you have two or more designs, such as wreaths, crosses, etc., to ship to the same party the crate can be made with two or more decks, placing the pieces one above the other, but for larger designs it is best to have a crate for each piece, so one man can handle it without difficulty.

We have shipped our made-up work this

way for the past ten years and have yet to hear of one complaint from our out of town customers. It is a simple and quick way to pack; any smart boy can make such a crate in five or ten minutes, which is a great saving in time when you have only—say half an hour, to make up your piece, pack it and catch the train, as has been our experience quite frequently in the past. L. F. D.

Roses in Summer.

"A Young Rose Grower" asks the following questions: "How to feed them? How to get rid of mildew? Will liquid manure be better than top dressing of cow manure? How old should the same be before using? Is it good to shade a house during hot summer days if roses are wanted to grow and bloom well?" And thinking the answers may be of interest to some others I send to you for publication.

To feed roses for summer blooming, as "A Young Rose Grower" suggests, I would advise a liberal dressing of well decomposed cow or sheep manure, for this season of the year from three quarters to one inch in thickness; then after it has been evenly applied all over the soil give the whole a good watering with the hose, and if possible with a medium coarse rose on it; this thoroughly soaks every particle of the manure, settles it down firmly on the soil and carries considerable of the ammonia down into the soil where the roots, if active, will quickly take it up. If the soil is at all poor it would be well to give a light dressing of pure fine ground bone before putting the manure on; this is a great root producer, providing always that it is not allowed to become too dry in hot weather, in that case the young feeding roots in close contact with the bone would get burnt. Another advantage of this treatment is that it keeps the soil much more uniformly moist in hot weather, which is a very important point if a constant supply of flowers is wanted. If after two months or so of rapid growth the plants show indications of needing help it may be advisable to give a dressing of liquid manure once a week, as it must be borne in mind that it is much more exhausting to the plants to keep up a steady growth during very hot weather than during the winter.

"How to get rid of mildew?" This, in some localities, is rather a hard nut to crack, but, as a general rule, sulphur carefully applied will keep it in check. The best way to do this is to close the house say about 8 o'clock a. m., run the temperature up to 75°, then with a bellows or similar appliance fill the house full of sulphur, let the house remain closed until it reaches 85° to 90°, then put air on gradually until full amount is on. In addition to the above a good healthy atmosphere should always be maintained with a constant circulation of air day and night through the house. Keep the plants sufficiently moist to maintain a healthy growth but not soft, watery shoots.

Liquid manure is not as good as a mulching for summer growth. The condition of the manure will somewhat depend upon the treatment it has been subjected to. If it has been kept out of the way of heavy rains, etc., and turned over two or three times in a season it can be safely used at six to twelve months old.

"Is it good to shade during hot summer weather?" Yes; a light shading will be of great help to most roses during July and August, but it should only be a very thin shading, as, if too much, the blooms will come thin and of poor color.

A very essential part of the business is syringing. To keep rose plants healthy during the summer they must have liberal syringings, thoroughly moistening every particle of the foliage and stems, otherwise red spider will soon get the upper hand, then the flowers will soon become beautifully less every day.

There is also another class of growers who want to carry plants over from last winter for another season's work, but do not want them particularly to flower during July and August, but their main object is to get the best results out of them for next winter. To such I would advise a gradual withholding of water, or rather, gradually reduce the quantity given until the plants virtually stop growing; then if possible lift the plants with all the roots possible and a fair proportion of soil attached to each and replant them into new soil giving sufficient water to keep the leaves fresh, till they have made healthy new roots, then gradually give more water as required; mulch, etc., as formerly directed for young plants; under such conditions plants will often do as well the second season as the first. But there are certain reasons why it is almost impossible to renew the soil as above, and yet necessary to carry over the plants. In that case I advise the same treatment so far as giving them a partial rest, etc., as above, then about six weeks before the buds are required for the coming season go carefully through the whole, cutting out any weak wood and reduce the other slightly, but leave plenty of foliage to maintain healthy root action; then clean all dead leaves and rubbish off, at the same time scrape off as much of the old soil as is consistent without injuring the roots, then give a good mulching of fresh loam and well decomposed manure in about equal parts, say one to two inches according to what was taken off. Give a fairly good soaking of water each day for three or four days until the whole is thoroughly moistened, and if the resting process has been fairly well managed a grand crop of roses will be the result. Such a bed or bench of roses would, after the first crop was cut, take liberal liquid manure dressing and give the grower generous returns, but much depends upon the care they get during hot summer weather.

Summit, N. J. JOHN N. MAY.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date of introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

Cactus Bed, Fairmount Park, Philadelphia.

A most attractive spot in Fairmount Park, Philadelphia, last year, was back of Horticultural Hall, where the beautiful bed of cacti was located. That the cactus is a popular plant was plainly proven to the "unbelievers", for at all times of the day this bed was the object of admiration from groups of visitors, and carriages would halt before it by the half dozen. We are assured by the Superintendent, Mr. Menge, that this bed was the great feature of the park, and that hundreds of photographs were made of it by amateurs and professionals. Mr. Robert Craig, John Thorpe, and several prominent New York celebrities of the profession admired it, and this is something strange from a florist's point of view, as they are not partial to this class of plants.

The bed made an imposing appearance measuring as it did forty feet across. The plate, of course, gives no idea of the many beautiful colors, or the good taste displayed in their arrangement, which reflects great credit on Mr. Menge and his able assistants.

Echeverias in several sorts, such as metallica, secunda glauca, pulverulenta, and many others of smaller growth were used in quantities to produce rich effects in colors and masses. Among these were set the valuable specimens of cacti, among which could be found such rare sorts as Echinocactus Grusoni, Mirabelli, pilosus, etc. Even Pilocereus senilis was used freely, as well as many fine mamillarias. Most of the plants were supplied by A. Blanc & Co., Philadelphia.

For the bolder effects, tall growing euphorbias, cerei and opuntias were used, and, as many of them bloomed freely, they came in for a great share of admiration.

That cacti are destined to take a prominent place in gardens and parks, as they already do as indoor plants, seems quite evident. From many quarters we hear of large cactus beds and rockeries being planned, notably in Prospect Park, Brooklyn, but Fairmount Park, Philadelphia, will no doubt eclipse them all, as a very elaborate display is promised for this season. They certainly deserve more notice from the trade. B.

New York.

Cut flowers of all kinds are shortening up and there has been no overstock for the past week. White or yellow roses go at sight. The opening of a box of such at the market or the wholesalers' is the signal for a miniature mob of buyers who surround the possessor clamoring for a share. La France and Meteors are now coming in fine and are the best varieties of their respective colors offered. Lily of the valley is in steady demand with a rather short supply. The greatest avalanche at present is the sweet peas. They come in by bushels, and the quality is very good indeed.

Among the unusual things seen at the 34th St. market just now is Iris Kæmpferi, semi-double white. The flowers are cut and brought in in bud, ready to open. For funeral or basket trade they work in very well. Lilies, such as auratum, candidum and Harrisii are abundant.

The school graduations being over the principal work now for the florists will be for the outgoing steamers. With some firms this demand is quite steady and remunerative but it is of course confined to certain days. Most of the commencement work this season has been very moderate in price, rarely getting beyond a small bunch or basket. There was little or no class decorations of any moment.

Weddings in town are few and far between; there was one notable wedding during the past week, the house being elaborately decorated by Thorley. Sweet peas, both white and pink, were very

CACTUS BED, FAIRMOUNT PARK, PHILADELPHIA.

largely used, a combination of white lilies and white sweet peas forming the motive in one apartment, while white and yellow formed another arrangement. Pink sweet peas, Beauty roses and ferns were also used.

The sensation of the past week has been the assignment of C. W. Matheson, 673 Sixth avenue. The general confidence in Matheson's ability to pay any bills he might contract was such that the announcement of the assignment came like a thunderbolt from a clear sky to many of his creditors. The commission men, as usual in such cases, suffer considerably by the failure. Much severe criticism is heard and so general is the belief that Matheson has saved up quite a large sum of money, that no one acquainted with the circumstances can be found who believes it to be an honest failure. Matheson has a son, James, who is reputed to be a hard character. He was arrested recently on a charge of flim-flamming and his father gave bond for him. He is known to have used up considerable money in horse racing and his father may have been financially crippled in consequence. But there are many who believe that the father and son are cut out of the same material. The hearing is set for July 7th. Some of the creditors threaten to make it hot for Matheson. There have been several suspicious assignments among New York florists in recent years and it is high time that the severest measures were adopted and the extreme punishment meted out to any one proven guilty of dishonest failure. Every one who manages to slip through unpunished only serves as a shining example for some body else to imitate, and the end will not come as long as it can be done with impunity.

Robt. Bottomley is to take charge of Mr. Geo. Vanderbilt's new place at Aiken, North Carolina. The estate comprises about 7,000 acres and there are at present over 200 men at work laying it out under the direction of Mr. F. L. Olmstead. Among the grand features planned will be an extensive arboretum.

The next meeting of the N. Y. Florists' Club will be on Monday, July 11. A large attendance is expected as arrangements for the trip to Washington will be discussed.

Boston.

The last week in June is virtually the wind-up of the season in the cut flower trade. It is always a lively week and coming as it does after the outdoor roses are about finished and the indoor roses are nearly all thrown out, it puts both wholesalers and retailers to their wits' end to fill the demand satisfactorily. The past week has kept them all very busy. School graduations and belated weddings have all come in with a rush.

Roses of all kinds have been very scarce, more than that, they have been below the standard as to quality in many cases. But people have for the moment forgotten to be particular and everything goes. Roses that a fortnight ago would have been indignantly spurned have been greedily snatched up. White roses particularly have been sought for and there have not been near enough to go around. Carnations are shortening up at last. Never before have they been so abundant in this market as during the past month. It has been impossible to make any sort of disposition of them at times, especially the colored ones. But from the present time they will go all right probably, as most of the growers are clearing them out of the houses. The largest and finest lot of carnations coming to the city now are received by McCarthy from Homer Rogers' big establishment. They are Mrs. Fisher and Grace Wilder mainly, and these two varieties will sell if carnations can be sold at all.

For the great public school celebration in Boston on July 2 the customary city order for bouquets was divided as usual between a number of the florists, eight or ten of them having about 400 bouquets each to make. There was a large quantity of stocks, candytuft and candidum lilies available for the work, as well as double deutzia which is very useful, but the outdoor roses were sadly missed by several who have generally had a good crop of these in for the occasion in former seasons.

The Gardeners' and Florists' Club picnic will this year take a different form from that of previous occasions, inasmuch as it will be an inland trip instead of the customary harbor sail. Difficulty in finding a suitable boat, also the fact that every resort in the harbor has already been worked till it is an old story to the florists, has influenced the committee in its choice of a new field for the annual outing. It will therefore take place at Walden Lake in Concord, to which place conveyance will be had by special train over the Fitchburg R. R. The ladies will be taken along and a large variety of sports will be arranged for, dancing, bowling, boating, with athletic games of various kinds. Mr. W. H. Long is chairman of the committee and has taken hold of the matter with his usual push, and if enthusiasm and energy count the picnic of 1892 will be a notably successful one. The date will probably be July 28.

The Public Garden is just now the scene of a very extensive display of Harrisii lilies which are massed effectively in beds and borders. Two large groups of Harrisiis interspersed with fine plants of dark foliaged acalyphas are very pleasing. Following this display the tropical plants and specimen evergreens will be set out to form the main summer decoration. The roses have looked extremely well this season.

One of the most enjoyable drives in that

loveliest of suburban towns, Brookline, is through the beautiful estate of Prof. C. S. Sargent, which he has with commendable generosity thrown open to the public. The grand groups of rhododendrons and hardy azaleas have made a glorious display there this season.

The legal contest over the rights of the peddlers of flowers and other goods in the public streets has begun. Two of these individuals having been arrested, tried and found guilty, their attorney has taken exceptions, claiming that the ordinance under which they were convicted is unconstitutional, and the question will now go before the Supreme Court.

The regular Saturday shows of the Mass. Horticultural Society commenced on July 2 and will continue weekly through the summer.

James P. Clark, florist at 1 Park street, has made an assignment.

Philadelphia.

Good flowers are scarce, very scarce, it really seems to be harder to get a few roses together now than any time last winter.

Roses are very poor, La France being about the best; they sell for 3 and 4. Brides are scarcely as large as the end of one's little finger but bring the same price. Niphetos and Guillots are fair and sell for 3. Carnations still present quite a respectable appearance and are in demand at $1 a 100; sweet peas 25 and 50 a 100.

This city and vicinity has been visited by two violent storms the past week. The wind blew a hurricane, the lightning was terrific and there was considerable hail, but as far as we can learn the loss to the trade was very slight.

Mr. Frederick Hahman, Sr., has met with a severe loss in the death of his wife which occurred last Monday night. About a month ago a neighbor was passing the place with a young New Foundland dog, Mrs. Hahman patted the dog on the head when the animal turned and bit her on the hand. The wound, although slight, was promptly attended to and no more was thought of it at the time. Mrs. Hahman's hand healed up all right, but last Thursday she complained of a pain in her wrist, which became very much inflamed. Doctors were summoned immediately but their efforts proved unavailing. Hydrophobia was given as the cause of death. Mr. Hahman has the sympathy of the entire trade in his great affliction.

The next meeting of the Florists' Club should be a very interesting one. The convention at Washington, how we are going and other matters pertaining to that very interesting time will be discussed. It has been agreed to go by the Pennsylvania line and the rate to Washington and return will be a very favorable one. There are other pleasant things connected with this trip that we will have to speak of later on, but which are not sufficiently developed at present.

Mr. John May was in town one day last week, and together with Messrs. Westcott, Craig and Burton called upon the railroad companies. It goes without saying that when this quartette get together they are bound to accomplish something, and we are sure that those who take this trip will have every evidence of their success.

Mr. Jos. Heacock is tearing down some houses and erecting others in their place. He said they didn't run the right way. Mr. Heacock's roses have been about right this season, but we presume when he gets these houses turned round we will see something really grand.

Robert A. Stewart, late with Hugh Graham, has secured quarters in a drug store almost opposite on the northwest corner of 12th and Chestnut where he has a large corner bulk window. He has it fixed up attractively and will endeavor to build up a large business. We wish him success.

Bowling is still booming. All the boys have their eyes on Washington and a place on that team is a coveted position. In the match for a place Longinette leads with McLean a good second. K.

Washington.

Everything is painfully quiet, both about the market and flower stores, so far as business is concerned. Flowers plentiful but of inferior quality. Weather fine and pleasant. Had several very refreshing showers during the week which have wonderfully improved the looks of the parks. Everything looking fresh and green.

Messrs. Small & Sons decorated the Cathedral of the Scottish Rite, the occasion being the funeral of Mr. Felix C. Draney, a member of the rite and one of our very enterprising citizens, whose loss his many friends deeply regret. The casket was placed in the center of the hall, surrounded by groups of Areca lutescens; among these were several large spikes of yucca, giving the effect to the unproffessional, of the palms being in flower. Suspended from the balcony was a number of baskets of cut-flowers. The chairs in the East, West and South and the three lights were tastefully surrounded with foliage plants. Mr. Draney was President of the Washington Jockey Club at the time of his death, and the Club ordered C. Strauss & Co. to make a horse shoe to be sent to his family with their sympathy. This was a most artistic piece of work, being composed of a base of ivy leaves, and filled with 250 Bride roses and 300 lily of the valley; the design was 4 feet in diameter and was as rich a piece of work of its kind as I have seen for years.

Strauss & Co. are making extensive repairs to their houses, have erected a large barn and contemplate building a large carnation house; they are enterprising citizens.

Mr. Chas. D. Ball of Holmesburg, Pa., was in the city last Wednesday, looking up quarters for the Penna. florists during the coming convention. He promises to bring the largest delegation that ever attended the annual convention from his state. He was in excellent spirits and I presume made satisfactory arrangements with the hotels.

The Smalls are adding to their already handsome store a fine "cool air cut-flower show case." It is about 12 ft. long, 8 ft. high and probably 3 ft. deep, lined inside with beautiful tile and with a plate glass front. They are evidently getting things in shape for the convention.

At a called meeting of the National Gardener's Club held July 1, the various committees to attend to local details of the coming convention of the Society of American Florists were appointed. [See names and addresses of the chairmen of the committees under another heading. —ED.] C. LESLIE REYNOLDS.

OBITUARY.

DR. T. G. RICHARDSON died at his home in New Orleans May 25. It may not be too late to pay an humble tribute to the memory of this unpretentious but truly great, good man. His death is a serious loss not only to medical science but to horticulture and floriculture as well. The large variety of hardy and half hardy palms and other exotic plants successfully introduced and domesticated by him will ever remain living monuments to his love for, and services in behalf of, southern horticulture and floriculture. "Peace to his soul." M.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

Nursery Notes.

TREES AND SHRUBS IN BLOOM JUNE 30.

My visit to the Arnold Arboretum three weeks ago has prevented me from following up a strict sequence of the trees and shrubs worthy of mention as they come into bloom without using up too much of your space. The great flush of trees and shrubs in bloom is past for a season, and from now on the number will be getting fewer, at the same time foliage and fruit effects will be increasing in variety and attractiveness.

PHILADELPHUS, deutzia, wiegelia and most viburnums are done blooming. The Chinese wistaria has begun its second crop; all other species are past. Rhododendrons are over, so too are Ghent azaleas. The bush honeysuckles are in fruit but the cat birds and robins ignore them, they like cherries better. This is sweet chestnut, prairie rose, catalpa and kœlreuteria week.

CATALPA SPECIOSA was in bloom with us a fortnight ago and now is all past. Catalpa bignonioides although barely at its best yet is in fine flower; C. Kæmpferi with poorer flowers by far is in about the same condition. I have never known the dwarf catalpa (C. Bungei as we call it) to bloom in cultivation.

AMERICAN, chinquapin, Japanese and Spanish chestnuts are all in bloom and the rose "bugs" happy at work among their blossoms. Some varieties, notably Numbo, are later than others.

KŒLREUTERIA PANICULATA is a broad headed small tree from northern China with immense panicles of small yellow flowers now opening into bloom, easily raised from seed, easy to grow, hardy and desirable.

CYTISUS CAPITATUS, a compact bushy shrub about 2 feet high, has every branchlet terminated by a head of yellow flowers. Nigricans and most of the other species are past.

AZALEA ARBORESCENS from the Alleghenies and A. viscosa from our eastern swamps are the only species now in bloom. They look a good deal alike, still they are quite distinct.

CEANOTHUS AMERICANUS is in good bloom and quite pretty.

THE DECIDUOUS HOLLIES, Ilex lævigata and verticillata, although more grown for their scarlet berries than their innumerable little white flowers, are nevertheless very pretty just now in bloom.

ERICA TETRALIX is in bloom. It is quite a common heather in moist peaty parts in Europe, midsummer blooming and hardy here. It has a grayish downy

caste, and terminal heads of pale rose bells. But this is not the "heather bell" of Scotland, that is E. cineria; nor is it the "ling" or late summer heather, that is E. vagans.

ELÆAGNUS LONGIPES in fruit.—I wish you could see our big plant to-day with its branches weighted to the ground with ripe fruit, and not a leaf marred by insect or fungus pest. Everybody who sees it wants it. Those of you who got for it umbellatus, the species which fruits in October, had better try again and get the genuine article.

INDIGOFERA DOSUA, a little pea flowered shrub from the Himalayas has been in bloom for nearly a fortnight and it will continue blooming for the next six weeks. Its flowers are rose colored, small but very pretty, in axillary racemes on the current wood. In a sheltered place it is hardy with us.

THE VENETIAN SUMACH now justifies its common name of smoke tree, but its American relative, Cotinus Americanus, has not attempted to make any smoke or ripen any fruit.

THE DOUBLE FLOWERING blackberry bushes are now in bloom and display very showy panicles of double daisy blossoms.

THE COMMON ELDER is still in moderate bloom, but much past its best. If it weren't for its commonness this would be a worthy shrub in our gardens, however, we have lots of room for it in the lanes and hedgerows.

ROSES.—The H. R. roses are pretty well over, and now when we want the basket filled we visit Mrs. DeGraw. The double prairie roses are in perfection, but in my opinion the best of them can not compare for loveliness with their first mother, Rosa setigera, which is now only opening. The wild Rosa Caroliniana is in bloom on the banks, in the waste fields and by the road sides. The double flowered microphylla is yet in good condition and although odd, rather pretty. R. foliosa isn't in flower yet.

HYDRANGEAS.—Vestita pubescens is about past. The early flowered variety of H. paniculata is almost white, but it will take a few days longer to reach its best. Thunbergii is fairly hardy and has terminal cymes of bluish tinged flowers. Can hardly include radiata and arborescens among handsome flowered shrubs, but quercifolia is a right showy species now in good bloom. You will find a splendid specimen of it in General Washington's old garden at Mount Vernon in Virginia which you must visit when you go to Washington in August. If I mistake not this shrub was planted there by La Fayette. And when there don't forget to ask about the Mary Washington rose a few of you have been quibbling about. You can buy a rooted cutting from the original bush right on the ground there for a few cents. But come back to hydrangeas. Those of the Otaksa, Thomas Hogg and the like types usually get killed to the ground, hence don't bloom; if any of last year's wood, however, escaped, the shoots from it will now be coming into bloom. Rosea, however, is hardier and earlier and it is in bloom with us now out of doors. And treated as an outdoor shrub all of the plants have pure rose colored flowers, whereas treated as a pot plant, even if not forced, the most of them have bluish blossoms, and it is a dirty blue most times. The climbing hydrangeas are mostly past. That known as Schizophragma hydrangeoides blooms when younger than H. scandens, and it isn't such a high climber. The southern climbing hydrangea (Decumaria barbara) is also in bloom; neither does it climb so very high before it blossoms.

MAGNOLIAS.—We are still getting a few blossoms on M. glauca and M. Thompsoniana X. The last named is generally supposed to be a hybrid between M. glauca and M. Umbrella, and its general appearance would indicate the truth of this. M. grandiflora (I can not call it fœtida) is also in beautiful bloom with us. We gather the branches in winter and set empty open-at-both-ends barrels over it, one above the other, till the whole plant is covered, and it keeps well in this way.

STUARTIAS.—The Japanese one (S. pseudo-camellia) used to be in fine bloom before this time, but our big specimen got so badly injured last winter on account of us cutting away some trees that sheltered it on the north side that it hasn't come into flower yet. The American S. pentagyna, however, is in full bloom and quite pretty, and it will continue in bloom for two or three weeks yet. The Japanese makes the prettier bush, but its flowers are much more fugacious than are those of pentagyna.

JASMINUM OFFICINALE is the white flowered jasmine so common in gardens in Europe and so seldom grown here. It is a woody vine indigenous to northern India, but long cultivated in gardens, and perfectly hardy in our middle states. The vines grow 10 to 12 feet high with us and are now in nice bloom. The plants are thrifty, and although they may get a little cut in in winter, by this time of the year they are so full of young, fresh wood, one would never suspect they had felt a winter's breath at all.

SPIRÆAS.—There are lots of them in bloom, and many of them are showy and beautiful, but their names are peculiar. In early summer white is the prevailing color among spiræas, but now it is pink. The prevailing types now in bloom are Japonica, Douglasii and salicifolia. Japonica is the most numerous and is represented by Bumalda, the best of all summer blooming pink spiræas; callosa alba, white; atrosanguinea, deep red; Fortunei semperflorens, deep pink. Douglasii from the northwest has dense, thyrsoid, terminal panicles of rose-colored flowers; Nobleana is a variety of it with looser panicles; sanguinea has darker flowers. In the salicifolia section, that known as Spiræa alba, or properly S. salicifolia paniculata, is the best among the whites, and syringæflora among the pinks. This last named has been in bloom for a fortnight and is a very showy, neat variety. Salicifolia itself is a fair plant. The pygmy S. bullata often called crispifolia is in bloom, so too is Tobolksii, which comes in later than sorbifolia. S. discolor ariæfolia will be better next week than it is now.

BENTHAMIA JAPONICA has been in bloom for over a fortnight and the flowers are fair yet. They much resemble those of our dogwood, Cornus florida, but instead of the bracts being imperfect as they often are in the dogwood, in the benthamia they are of perfect mould. The benthamia blossoms when it is in full leaf, the cornus before its leaves appear, and the foliage is deep green, glossy and handsome and occasionally shows a white variegation. There are two varieties, one with larger leaves than the other. Benthamia fragifera, the one so much grown in southern Europe is not hardy here, and our Japonica is very little known in Europe.

PRIVETS.—Old plants of any of the species make fine blooming shrubs. The common privet (Ligustrum vulgare) is out of bloom, and Ibota, an exceedingly free flowering species is nearly past; but ovalifiorum, the California privet, is studded all over with white panicles. About Washington and southward L. Japonicum and L. lucidum will now be in fine bloom; they are neat, tree-flowering, showy shrubs, but not quite hardy here.

LINDENS.—What are generally known as "European" lindens have been in great bloom for a week or more. Tilia platyphyllos was the first to bloom. I never before saw it so full, and its fern-leaved variety is just as full. Tilia vulgaris is the one in finest bloom just now. T. ulmifolia, another of the same group, is also in flower. Under the name of T. Mongolica we have a very distinct linden with small birch-like, deeply serrated leaves; it is now beginning to bloom. Tilia Americana has commenced to open its flowers. The silvery linden (I. argentea), and the drooping linden (I. petiolaris) are later still and haven't expanded a bud yet.

Long Island. WM. FALCONER.

Pachysandra Terminalis.

In a note, page 1050, I referred to P. procumbens when *terminalis* was the name I meant to have used. P. procumbens is a modest little plant from the Alleghenies and inferior, in a decorative way, to the Japanese plant. I have grown all three, namely, P. terminalis, its variegated form, and P. procumbens for several years. The American species is also grown at the Arboretum, but is not so well thought of as the Japanese one. WM. FALCONER.

Magnolia Watsoni and the English Botanists.

Apropos of my note about this magnolia, June 9, page 1009, the venerable Samuel B. Parsons of the Kissena Nurseries, writes me:

"What is the matter with the English botanists? Are they never willing to give Americans credit? Our Magnolia parviflora named in 1891 by Sir Jos. Hooker as Watsoni was introduced by us into this country through the enterprise of Thos. Hogg and named by us in 1875. If the name is changed from that we gave it, it should be by us, and we should call it after Mr. Hogg. The English cannot plead ignorance, for we advertised and sold it ten years before it appeared in the Paris Gardens, and it was well known here when they named it at Kew."

The committee on nomenclature of the S. A. F. in their report last fall covered this case exactly. See Proceedings of Seventh Convention ('91), page 91. "In the case of new species of plants, the first published botanical name takes precedence, but this publication must be technical and made in a recognized botanical or horticultural periodical or work, and not in a trade catalogue." Messrs. Parsons' magnolia was named in their trade catalogue twelve years ago and the name was kept up by them ever since in their catalogue, but as the plant was a species and not a garden variety, the botanists cared not a crack of their fingers for Messrs. Parsons' name or catalogue, and named it just as they pleased, and their name will stand. This is pretty galling but we cannot help it. We know the law, and if we will profit by it, we must take timely advantage of it.

When at Professor Sargent's the other day I called his attention to this same Magnolia Watsoni case and he answered:

"Well, I agree with you, I don't see the justice of naming it Watsoni."

The English botanists, or European botanists anywhere, don't give us any more credit than we deserve. Our only hope, therefore, is to fight our own battles and name our own plants, and that too before they cross the Atlantic, and publish these names properly, then the Europeans can rename them if they wish to, our name being the original one will stand forever in spite of theirs.

WM. FALCONER.

As California Views It.

Under the heading "Hostile Nurserymen" the San Francisco Call of June 5 publishes the following:

The dispatches from Atlanta, Ga., announce that the National Association of Nurserymen have passed resolutions antagonistic to California fruit interests.

Secretary Lelong of the State Board of Horticulture said yesterday that the enmity of the Eastern nurserymen is caused by the fact that California has exercised a strict surveillance over all imported orange trees. The result was that local quarantine officers have destroyed 325,000 diseased orange trees since last spring which were shipped from Tahiti and that 152,000 peach trees from the East shared the same fate. The latter were infected with the most incurable and contagious disease, called the "yellows," and the nurserymen who shipped them here are now so angry that they are ready to advocate any measure calculated to do California some harm.

Circulars have of late been spread throughout the country by the nurserymen in the East alleging that California dried fruits are dangerous to the consumer because they are handled by Chinese and because they are sulphured. As a matter of fact white boys and girls handle the principal portion of our fruit crop, and there is a very limited use of sulphur. Sulphur, which is not injurious, is only used now for the purpose of bleaching and preventing fermentation.

A Vicious System.

Under the above heading *Meehan's Monthly* says: "A well known firm, dealing largely in peach seed, received an order from a California nurseryman, who got an idea that Tennessee natural peach stones would make better trees for Californian peach orchards than the in-and-in bred peach stones of California. The disease commission refused to let the owner have them unless the shipper would make affidavit as to the exact locality where the stones were grown. Affidavit was made that they were truly Tennessee seed from ungrafted trees—but as the collections had been made from different localities the exact spot which produced these stones could not be truthfully stated. This was not satisfactory, the peach stones were burned, the customer would not pay the bill for the stones, and the railroad company came on the shipper for the freight as well; he lost the whole bill. If the shipper had "lied just a little" and given some little orchard in Tennessee as *certainly* the spot, it would have been all right, but what is to be thought of a system which offers a premium to the unscrupulous and shuts out the honorable dealer. It is a wonder the eastern nurseryman himself is not shut out from California, for fear some terrible bug get through on his clothing, which has caught on from the trees on his grounds. The regulations usually injure the makers more than the enemy."

Under the heading "Points not well taken" the *California Fruit Grower* comments as follows:

"The quarantine system adopted by this state to prevent the introduction of peach "yellows" and other infectious diseases is denounced by *Meehan's Monthly* as a "vicious system." It also cites a case in which a consignment of peach pits from Tennessee was burned because the consignor was unable to identify, on oath, the exact locality where each small lot making up the aggregate shipment was produced. But we must protect our peach interests; and Brother Meehan would be the last to condemn a system which held vessels in quarantine in cases of even suspected infectious diseases on board. On the broad principal of self-preservation and the greatest good to the greatest number we are certainly justified in taking stringent measures against the possible introduction of fruit tree pests of every name and description. Incidentally and temporarily it may work hardship to some honest men, but in the long run, and on the broader scale, it must result in good to all honest and careful nurserymen, fruit growers and dealers. It has been the almost criminal negligence, coupled with dense ignorance of the past, that has brought upon us at last the positive necessity of the most stringent regulations for the proper safeguards to our most promising industries."

It seems to us that the *Fruit Grower* fails to meet the main point made by Mr. Meehan, which is that the system "offers a premium to the unscrupulous and shuts out the honorable dealer." It fails to protect from men who will make affidavit to any statement that will advance their financial interests, and it is from such dealers that protection is most needed, while the men who are injured are the very ones with whom commercial relations should be cultivated.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By smart, energetic young man; 6 years in roses, carnations, mums, ferns and palms. Good references. KEMP, Kokomo, Ind.

A GENERAL INTRODUCTION.

There has been some little complaint of the difficulty of identifying those we would like to meet and become personally acquainted with at the annual conventions of the Society of American Florists. Various plans to make identification easier have been suggested, but all have either been impracticable or have had some objectionable feature that militated against their adoption.

The AMERICAN FLORIST proposes to solve this problem in a way that will we believe be eminently satisfactory to every member of the society, and without any expense to that organization. Our plan is to print in our convention supplement portraits of every member of the Society of American Florists who expects to be present at the Washington meeting. Of course, in order to give space to such a large number, each one will be reduced in size, but they will be good portraits and large enough so that the originals may be readily recognized from them. These portraits will be numbered consecutively and the names given opposite their respective numbers on an adjoining page, and there will also be given in the supplement an alphabetical list of the names, referring to the portrait by number, so that reference from and to the portraits will be quick and convenient.

If you expect to be present at the Washington meeting next August, and are a member of the Society of American Florists, or expect to join at Washington, please send us a recent photograph of yourself, cabinet size preferred. If you have no recent photo, have one taken. This should be attended to now, for with the great amount of engraving that will have to be done we must have the photos in hand by July 15 at the latest. And do not send photos that need to be returned to you as they will have to be cut in arranging in the groups. If you have a good recent photo send it in to us now, always writing name and address on the back.

JUNE 30 Mr. G. H. Leahy withdrew from the Dingee & Conard Co., West Grove, Pa., selling his interest to the original owners. The separation was with mutual good wishes. Before considering the future Mr. Leahy will take a good rest, not having had what might be called a vacation for five years past.

S. E. B.—The matter has been thoroughly discussed in these columns. The majority considered hot water best for small establishments and steam for large ones—where a night fireman was kept.

YOU CAN never invest $2 to better advantage than in a copy of our new trade directory and reference book.

THE third annual report of the Missouri Botanical Garden has been received from the Director, Prof. Wm. Trelease, St. Louis. Among much other valuable matter it contains the result of Prof. Trelease's recent study of the yuccas, freely illustrated by handsome plates of numerous varieties.

IF YOU have any really good thing to sell to florists, don't fail to show it at the trade exhibition at Washington in connection with the annual convention of the Society of American Florists. All the live men in the trade will be there, and they are the men who are quick to discern merit in anything that really possesses it.

Bay City, Mich., Nov. —— Chrysanthemum show Bay County Hort. Society. T. J. Cooper, Sec'y.

DECATUR, ILL.—N. Bommersbach has added 7,000 feet of glass to his greenhouse capacity.

UTICA, N. Y.—The annual banquet of the Utica Florists' Club was held June 29. About 35 covers were laid and a most enjoyable time was had.

GALT, ONT.—The Galt Hort. Society will give an exhibition of fruit and vegetables September 7 and 8, and a chrysanthemum show November 8 and 9.

INDEPENDENCE, KANS.—The continuous rains this spring were beneficial to vegetation, but now it is hot and dry and the ground hard. We will hold a "mum" show this fall.

MILWAUKEE.—Mr. P. J. Deuster, on Blue Mount road, who started into growing roses for cut flowers about a year ago, has had phenominal success, and he is now building seven more large houses.

EATON, O.—The Eaton Floral Society will give its second annual flower show August 11 to 13 next. The premium list has been issued and copies may be had of the secretary, Mr. H. E. Jephson, Eaton, O.

WARREN, PA.—The evening of June 27 we had the heaviest hail storm ever known here. Some of the hail stones were as large as butternuts. Great damage was done to trees and glass. The florists all suffered heavy losses. E. V. Coleman lost 800 lights of glass, and his total loss will be from $200 to $250. D. Offerly lost about 300 lights of glass and Miss Fitzgerald 300 to 400.

LILIUM HARRISII (Bermuda Easter Lily).

FIRST CONSIGNMENT due this month. SECURE our extra large sized bulbs by placing your orders NOW. and COMPARE our prices and sizes before ordering elsewhere. We are yet in position to ship any number.

LILIUM HARRISII.

Always mention the American Florist when writing to advertisers.

Toronto.

Brother Alonzo Watkins of the Horticultural Gardens has been doing some fine carpet bedding this year which is attracting much attention. I intend getting from him the pattern and composition to send you later on. Some private people also have gone into this style pretty extensively this year. I notice also some subtropical bedding done in the best style with crotons, palms, Dracænas, etc. There are still a few beds about planted with magenta pink and scarlet geraniums but they are happily growing less every year. A bed of these is a sight that gives one a sort of sea sick feeling and would I am sure lay Mr. F. Schuyler Mathews up for a week.

There is no trade to speak of just now, the holidays are on and every body of any consequence has gone to Europe, the sea side, the lakes or the mountains.

Now that work is getting slacker your correspondent intends visiting some of the principal gardens in and round the city and will endeavor to give some account of their beauties in future notes.

E.

From Chicago to Washington.

The Chicago Florist Club has secured a special low rate from Chicago to Washington over the Pennsylvania R. R., unquestionably the best route, and the train selected will take the party over the Allegheny mountains during the day time so there will be opportunity to fully enjoy the magnificent scenery. Florists in the west and northwest are cordially invited to join the Chicago party and share in the advantages secured. Berths may be reserved by addressing any member of the committee, whose names follow: G. L. Grant, 322 Dearborn street; J. C. Vaughan, 146 W. Washington street; P. J. Hauswirth, 318 Wabash avenue.

Do YOU WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

Zirngiebel's

GIANT MARKET and FANCY PANSIES

New crop seeds of those superb strains now ready, in trade packets of 1,500 and 600 seeds respectively, at one dollar each.

DENYS ZIRNGIEBEL,

NEEDHAM, MASS.

ROEMER'S SUPERB PRIZE PANSIES

The finest strain of Pansies in the World.

Introducer and Grower of all the leading Novelties.

Catalogue free on application.

FRED. ROEMER, SEED GROWER,

QUEDLINBURG, GERMANY.

GIANT PANSIES.

It's the **BIG PANSIES** that "take the cake" now. The best is none too good for your trade. The plants I offer are the Zirngiebel strain—best there is. It costs more than strains ordinarily sold, but I offer strong stocky seedlings. August delivery and later, at usual price: 75 cts per 100 by mail; $5 00 per 1000 by express. Strong transplanted plants, many of them showing bud, $1 25 per 100; $10 00 per 1000.

ALEX. McBRIDE, Alpaus, N. Y.

EXTRA PANSY SEED.

Mammoth Sunbeam Strain.

A grand collection of giant flowering varieties very large, of perfect form, and choice colors; carefully selected; receive high praise from my customers. Every florist should be sure to sow it. Trade pkt. 500 seeds, 25 cts.; 3 pkts 60 cts.; 6 pkts. $1 00.

JOHN F. RUPP, Shiremanstown, Pa.

CHINESE PRIMULA Blood-Red.

(*Primula Sinensis Fimbriata Atrosanguinea.*)

The deepest red in cultivation, a very salable color, per trade pkt. (250 seeds) 50c.

PRIMULA white, red, Kermesina splendens and all colors mixed (Vaughan's International), per pkt. 50c.

CINERARIA Vaughan's International mixture, per pkt. 50c.

CALCEOLARIA, CYCLAMEN, VIENNA CARNATION, AND ALL OTHER SEEDS IN SEASON.

J. C. VAUGHAN,

148 W. Washington Street,

And 12 Barclay Street, NEW YORK. CHICAGO.

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

L. B. 338. **ALBERT M. HERR, LANCASTER, PA.**

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:

1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.

2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.

3rd. It requires no season of rest.

4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:

1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum,

2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:

Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

JOHN IRVINE CO.,

BAY CITY, MICH.

EVERY FLORIST IN THE LAND

Should have a good bed of the New Giant Forcing

DAISY SNOW CREST

Introduced by Mr. H. A. Dreer.

We are Headquarters, and have 20,000 plants to offer at $1.50 per doz.; $10 per 100; $80 per 1000. It is easily and rapidly propagated by cuttings and division, and **NOW IS THE TIME** to get up a stock for fall planting. It is double the size of Snowflake and vastly superior in every way. Many of the blooms were larger than a silver dollar as we grew them last winter. It is a free and constant bloomer, requiring the same conditions as violets.

We also have a heavy stock of **Snowflake** that we will close out at $1.50 per 100; $12 per 1000, for the next three weeks.

Yours very truly,

J. C. GIBSON, Woodbury, N. J.

St. Louis.

Trade held up remarkably well this season, but is about wound up now. Roses are scarce, white is in demand, and sweet peas are a glut.

Ernest Zaun at Mt. Sinai cemetery was badly damaged by hail and the Michel Plant and Seed Co. had their hydrangeas badly cut up,

One of the attractions of the Mo. Botanical Garden just now is a blooming plant of Agave Salmiana. This species belongs to the americana group. The specimen was collected sixteen years ago by the late Dr. C. C. Parry in Mexico, and sent by him to Dr. Geo. Englemann, who presented it to the garden.

When it came into the posession of the garden it was a small plant, probably a sucker. When a few months ago it began to show signs of blooming it consisted of a fine rosette of about seventy leaves seven and one half feet in diameter. May 3 the flowering stem first showed itself above the upright leaves which precede flowering. To-day, June 30, the stem is thirteen and one half feet high. The panicle is six feet long, and about thirty inches in diameter.

Records of the daily growth of the stem have been kept, and show a variation of from less than an inch to more than six inches. Carefully kept records on this and other agaves that have bloomed at the garden seem to show that the state of the weather has no influence on this variation.

Strange to say, a small sucker has followed the example of the parent plant, and has thrown up a stem eighteen inches high. This sucker has made no true leaves, all being reduced to bracts.

J. C. DUFFEY.

Newport, R. I.

The rose and strawberry show of the Newport Horticultural Society on June 29-30 was a gratifying success. The displays of palms from J. S. Cowles, Andrew Meikle and Chas. D. Stark, as well as the general display by Robert Hunnick, were unusually fine. Hugh Williamson, Joseph Magee, Gibson Bros. and others received many prizes for roses, and Siebrecht & Wadley showed some fine ornamentals. From Shady Hill Nurseries, Woolson & Co. and Pitcher & Manda came extensive collections of hardy herbaceous plants.

HAIL LOCK THE DOOR BEFORE THE HORSE IS STOLEN **DO IT NOW.**

JOHN G. ESLER, Sec'y F. H. A., Saddle River, N. J.

Worcester, Mass.

Everything is looking fresh and green after our three days of rain and is growing like mad; we needed the rain sadly but it came just in time to spoil most of the outdoor hybrids.

Trade is a little slow but not as dull as might be expected; June weddings have helped us out a little; prices of course have dropped a peg.

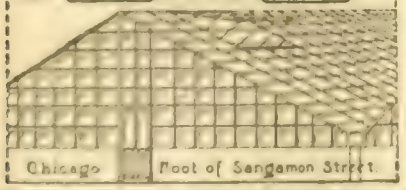
The Horticultural Society's H. P. rose show was held June 23 and although the rain came down in torrents nobody complained. As a rule the roses were not quite up to the standard; this seems to be the case everywhere in this vicinity; the open winter and dry spring probably was the cause of such poor flowers.

For the best 12 blooms H. F. A. Lange took first and Joseph Brierly second; Baroness Rothschild, Merveille de Lyon and Ulrich Brunner stood out prominent in this class.

For best 6 blooms Joseph Brierly took first with nearly the same varieties he showed in his 12; D. E. Wilson second.

The stands of 38 blooms each made a very good showing as they were grouped so close that the defects in the individual blooms were not noticeable; Lange first, Brierly second.

The moss roses were very poor but one stand being shown by H. A. Jones. A great fault in the baskets was that the stuff was jammed in too close; the only loose arrangement was that of Lange, who captured first with a basket of Baroness and Merveille de Lyon with a bunch of Fisher Holmes on the handle.



O. B. Hadwen occupied a table with a handsome arrangement of pink and white pæonias, and F. A. Blake, of Rochdale, made a splendid display of Dianthus barbatus, showing over 100 varieties without a duplicate. SEEDLING.

Montreal.

Business is quiet now. Most of the growers are busy getting ready for next winter; a large number of roses are being planted this year. The club picnic is to be held on July 28. The Horticultural Society will hold their annual exhibition in September in conjunction with the Provincial exhibition; $1,500 is offered in prizes and this will most likely bring out a good exhibit. J. B.

Moles.

To get rid of moles try the following: Knock off the rosin from a ball of potash, pulverize the potash, make openings in the runs, drop in a tablespoonful of the potash and cover the opening with a flat stone. I tried it and the moles disappeared within a few days. Ball potash is very caustic and must be handled with caution to avoid injury to the one using it. ELLIS STEPHENSON.

IF YOU have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

Our Telephone.

"Hello, hello!"

"Is that Hotel Reynolds, Boston?"

"Yes, what do you wish?"

"We want to talk with Mr. Hugh Dickson, a very tall young man from Belfast, Ireland. Have you such a party stopping with you?"

"Yes, he is right here."

"Hello there, is that you Dickson? As they say to the actors, 'How do you like America?'"

"As the cat said to the cream pitcher, 'I'd like to stay here all the time.' But, to tell the truth, I haven't seen much of it yet, for my visits up to the present time have been confined to a few of the eastern cities. I was fortunate enough this time to be in Boston during the annual rose and strawberry exhibition of the Mass. Horticultural Society which naturally interested me very much."

"Well, how did you like the exhibition? Did it compare favorably with similar shows in England?"

"Well, the strawberries were very fine in appearance, but I really don't think they have as good flavor as ours. But the roses were what interested me most. Now, I must say I was greatly disappointed in this department of your show. In finish, color and size the blooms taken as a whole were very weak and would not at all compare with the English rose shows. This can to a certain extent be attributed to the very hot spell we had for the week before the show, but I fancy if the same attention was given to your outdoor roses that you give to your indoor ones you could greatly improve your flowers."

"What would you suggest?"

"Well, firstly I would be inclined to tickle the rose beds with a hoe, say 2 inches deep, before the hot summer suns begin, then mulch the beds with a good dressing of rotten cow manure, say 2 to 4 inches deep. On this I would spread the short grass of the lawns, which will prevent the weeds growing and give the bed a neater appearance and at the same time prevent the hot suns taking all the moisture out of your manure and soil. I also think that if the hose was applied freely in the cool of the evening you would get a better growth than you at present do and possibly a fall bloom. I always understood that you showed your roses here on very long stems. Now, I was very much disappointed in this too. I think we show our blooms on quite as long stems as you do and certainly in a neater way. We have a wire support to each bloom which keeps it setting erect and all of a uniform height in a row, the back row of the box of course being higher than the front. Then as to classification I think it would be a great improvement if you would admit hybrid teas and teas. Look what an improvement to the tone of a box a good Perle or Hoste would be when placed between two crimsons."

"But you must remember, Mr. Dickson, that these are not hardy here. Our great object is to encourage the raising and planting of hardy roses."

"Oh, yes, some of them are hardy. There is Gloire Lyonnaise, sent out by Guillot as a yellow hybrid perpetual. He made a mistake there as it is a creamy yellow hybrid tea. But it is perfectly hardy here and will give more blooms than any other rose of its color that I know of. It looks almost mildew proof. I saw a three year old plant in Philadelphia from which Dr. Huey cut this season already 150 blooms, and I believe he will cut another 150 before the season is out."

"We understand that at certain shows in this country Magna Charta has been ruled out of the hybrid perpetual class. How would you class Magna Charta?"

"We hold it as a hybrid perpetual."

"What stock do you bud your roses on?"

"For hybrid perpetuals we use Manetti and for teas the Dog Rose."

"What advantage do you claim for budded over own-root stock?"

"Immediate effect. The purchasing public gets from budded stock as much bloom in two years as will repay the whole outlay, whereas with own-root stock you must wait two years before the plant is any size. You must not confound roses properly budded low down on Manetti stock with the stuff budded high on the stem which is sent over here from Holland for auction sales. We exercise great care in the preparation of our stocks. First we cut the wood into lengths of about 12 inches and cut out all the eyes from the base up, leaving only three at the top to grow. These are then planted and after a 12 months' growth we lift them, cut off all the rootlets that may be up the stem, also cut back the roots at the base so that they will break away again and become bushy, and plant about four inches deep. Then when we come to bud we scrape out all the soil from around the roots and bud close down. The following spring, say in March, after the bud has started, we cut off the top of the stock and mould the plants up slightly. In this way we often get our roses not only with the roots of the stock but with own roots as well. If budded stock is planted deep you are liable and likely to have them doubly rooted. In addition to the hot suns which are against your roses in outdoor culture, I find you suffer a great deal more from insect scourges than we do."

"About your hybridizing; what are you doing and what are you aiming for?"

"Well, we know that if we can only strike a yellow tea of good substance and color it will be a ten strike for the American trade alone, so you will understand that this is one thing we are striving hard for. In our early trials we used

Gloire de Dijon considerably, but have found since that it is useless as a parent, for no matter what the other parent may be the Dijon blood is most manifest. It may interest you to know that the result of one cross between Dijon and Perle was a purplish red. In crossing two roses of sweetest fragrance we often in the progeny get a rose without a vestige of perfume."

"How do you account for this?"

"Don't know how to account for it and would like to meet the man who can."

"How do you like American Beauty over there?"

"Not at all. We kicked it out long ago. It lacks finish and is inclined to be off color. You must remember I am talking of roses grown out of doors only. We have never to my knowledge tried Beauty indoors. Our forcing of roses in Great Britain is not very extensive. On the Continent they can best us in this department, but that I account for by the bright weather they get as compared with us in winter. If you don't get sun to ripen wood you can't get flowers. Perle, Niphetos, Safrano, Mermet and Bride we grow extensively outdoors."

"What is your experience with the Waban?"

"Waban with us comes deformed as a rule. Indeed, the majority of its flowers are imperfect. Occasionally we get an undoubtedly fine flower and the color is very rich. If they would only all come as good as the plant from which it sported it would be a great acquisition. It is our experience that a sport is rarely equal to its parent. From this rule, however, I would exempt the Bride, which I consider about our best white tea. Nothing better could be desired for size, form and finish. No amateur or professional rose grower and exhibitor can afford to be without the Bride, as its great size, magnificent form and excellent finish add many points from a judicial point of view to an exhibition stand. Cusin with us is a very good rose, but Watteville beats it in every way. A large part of the roses in our cut flower markets come from the south of France. Compared with the flowers seen in your American shops they are miserable things, and they are all short stemmed. One point I will make before saying good bye. While the world runs we are bound to have both sexes, otherwise the world stops. Now, apply that to your flower trade. Wherever you find a girl of taste her chosen flower is the rose. And wherever you find nice girls there are fools of fellows, and the roses are sure to go whether the fellows can afford it or not."

"That's good philosophy. Will you make any exhibit at Chicago next year?"

"Yes, we sent over last February in compliance with Mr. Thorpe's request a lot of 1,200 roses, largely our own seedlings."

Notes From Boston.

A NEW LILY.—Mr. Jackson Dawson showed me a new lily he had growing and in bloom. It was a direct contribution from Formosa (if I remember aright). He had plants in pots that were done blooming, plants in an outdoor warm border where under a mulching they had lived over winter and were now in bloom, and thousands of seedlings of it in flats in the greenhouse. In style and habit it resembles Lilium japonicum, indeed, as soon as I saw the flowers I thought they were L. Brownii, for in shape, set, and color they much resembled it. The flowering plants were one to two feet high and well leaved to the ground. But the most remarkable thing, in my mind, about the lily, is its "quickness." The flats of seedlings were sown last January 12 and when I saw them June 9, just six months later, the seedlings were up as thick as it were possible for them to grow, and some of them were forming stems, and two or three of these had flower-buds on. These seedlings had never been pricked off, which was a pity, for had they been, and kept in active growth no doubt they would have been larger, and many more showing flowers, than what there were. Mr. Dawson tells me the seeds germinated in less than a fortnight. This will make it an exceedingly valuable lily for florists to handle, especially those in the plant trade, as they can get up a stock of it so quick. Seed of most kinds of lilies will lie dormant in the ground for a year; some come up in three to six months. But the seeds of L. tenuifolium, L. pulchellum, and L. callosum are the only ones I have had to come up as a crop in less than a fortnight; and while I have had lots of them to bloom the second year from seed I never managed to bloom any of them the first year from seed. Now we have carnations that come into bloom in four months from the time we sow the seed; roses that bloom the first year from seed sowing (a fact, I have them now in bloom from seed sown first of last March), and lilies that bloom in six months from seed, and I believe the lily case is the most wonderful of the three.

GLOXINIAS.—Prof. Sargent had the finest plants I ever saw; many of them were in 10-inch pots, had a mass of leaves 2 feet across, and between 100 and 150 flowers on a plant. They occupied a small span-roofed house altogether, and were kept moderately warm, shaded from sunshine, yet near the light, and in a moist atmosphere. But care was taken not to wet the foliage or flowers. A lot of this year's seedlings were planted out on benches in another span-roofed pit which is used for growing lettuces in in winter; these seedlings will give late flowers, beginning to bloom in July.

ACHIMENES.—These had recently been potted up and were being started in a warm, small greenhouse. He got them from Dammann, of Italy, who has a reputation for fine varieties. But I don't think we need go so far to get choice achimenes.

CANNAS were grown in considerable quantity as pot plants for greenhouse decoration, and they looked very cheerful indeed skirting the sombre palms and tropical greenery.

AMARYLLISES were grown in considerable numbers for conservatory decoration rather than for cut flowers. Now this is a class of plants that must become more popular for they have sterling merit. They are of the easiest possible cultivation. With greenhouse aid we can have them from Christmas till midsummer and without any greenhouse at all we can have them from April till August. In fact Johnsoni, aulica and formosissima are in bloom in pots set outside in several of the little gardens by the roadside in Glen Cove to-day, and their owners have only a cellar and a window to winter them in. As I was passing the other day, Mrs. Edgar Wright, an old lady, called me in to ask me the name of a formosissima she had in bloom. "I bought the first bulb of it from Mr. Allen at Queens, twenty years ago," she said, "and it has increased as you see and comes up and blooms every year. And we think it is perfectly lovely, the color is so bright." Cut the flowers as soon as they open and before the anthers burst, and they will last and keep their color for two to three days. Henry Siebrecht told me that one of their customers, one of Gotham's 400, makes a point of having when procurable at all, a centerpiece of brilliant amaryllises for her table, when she gives a dinner party.

TUBEROUS ROOTED BEGONIAS.—About a dozen years ago Prof. Sargent's garden was famous for these; he used to plant them out in beds, especially in a border against a north facing wall behind a greenhouse. He still sticks to these begonias, I see, but has changed his summer tactics, and instead of growing them out of doors, he grows them in pots in the greenhouse. Their blossoms were immense.

SINGLE PÆONIES.—He has a large number of the various kinds of double pæonies, and singles, as tenuifolia and albiflora, all planted out in the open garden, but when I told him in point of loveliness he had nothing to compare with the big flowering single beauties of Japan, he resolved that he must have them too and enquired "where can I get them?" If you florists who have these nice things in stock won't advertise them, blame your own short-sightedness, if you cannot sell them.

IMANTOPHYLLUMS.—He is great on these and wishes he had more of them. They are easily grown, have fine foliage the year round, are most always in bloom, and easily kept clean. "True," I remarked, "but if your primary object was cut flowers would you grow them in such quantity?" "No I don't know that I would," he answered, "we grow them for conservatory decoration alone and for this purpose find them indispensable." The flowers do for cutting too, very well, but I don't think they would bear flowers enough for this purpose, in proportion to the room the plant would occupy, to pay.

THE HYBRID STREPTOCARPUSES were in nice growth and bloom, and very pretty little pot plants they make. When well taken care of from their youth up they are very pretty, and full of lilac and purple flowers, but I question if we can ever handle them with profit as general florist plants, they need too much attention to raise them. As amateurs' plants, however, and as a specialty with certain florists they are perfect gems.

THE TRICOLOR BEECH.—A vase of well leaved little sprays of this was exhibited at the rhododendron show at Boston. In the gaslight the variegated leaves showed up to fine advantage, and it occured to me what a capital thing it would make for indoor decorations with cut flowers. This tricolor-leaved beech is something new and not at all plentiful, and there is no large plant of it in the country, not even a large bush. It is a a purple-leaved European beech whose leaves are also freely variegated with a bright pink or red color; in fact the two colors—dark purple and pink, are much the same as we find in a well-colored Dracæna terminalis. The tricolored beech is perfectly hardy and apparently as free a grower as is the purple or green leaved forms, at least it so acts with us.

WM. FALCONER.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

VIEW IN THE RHODODENDRON TENT AT MR. F. B. HAYES', LEXINGTON, MASS.

A Few Plants Worthy of Notice, Grown at U. S. Botanic Garden, Washington, and in Flower at Present.

MONARDA KALMIANA, with its bright scarlet flowers, solitary or twins, supported by a leafy bract, the leaflets being of a pale green color tinted with red. Flowering from June to September, this is truly a very handsome hardy herbaceous plant, well worthy of being more generally cultivated. It is easy to propagate by division of roots in fall; likes good, rich soil, but does not do well in the shade. Its bright red color and abundance of flowers always attract much attention. It does admirably with us and is admired by many visitors.

ABUTILON ECLIPSE deserves more attention than is generally given to it. It is really a good thing for bedding, with its beautiful variegated leaves of bright yellow and green. It is more upright and bushy in growth than the type, vexillarium pictum. When planted out it fills quite a space, at least 1½ feet square, is easily propagated and roots freely from young wood started in the house in early spring. Well worthy of cultivation.

CAMPSIDIUM FILICIFOLIUM is a most excellent thing for trellises during the summer and is a rapid grower when planted in good soil with plenty of water. Its beautiful fern-like foliage and handsome flowers make it very attractive. It does well on the iron fence in front of Mr. Smith's office.

ERYTHRINAS.—Growing at the Botanic Garden are several varieties of erythrina, the coral tree. The finest of them all is E. crista-galli, with its bright deep scarlet spikes of bloom, some of them being two feet long, and a single plant having as many as 20 spikes at a time. It attracts much attention.

E. LAURIFOLIA has much larger flowers but is not so bright as the former variety. But it is a far stronger grower.

E. HERBACEA.—Flowers smaller, spikes not so long. Very deep scarlet, much darker than the other varieties. An excellent thing.

E. HENDERSONII does handsomely with us, producing a quantity of bright scarlet flowers. Its shoots are not as strong as crista-galli, nor are its spikes of flowers so long, but it flowers when quite small. Very attractive.

E. MACROPHYLLA has not flowered with us. Neither has E. Corallodendron, which has larger leaves than any other and seemingly requires a dry sandy place.

THEY ARE all worthy of cultivation, make fine plants and when in flower are admired by every one visiting the gardens. They only need slight protection in winter with us. By cutting off the flower stems pretty well back after flowering they are induced to make another growth, which will produce flowers. This may be continued from June until frost, and the plants will continue in bloom all the season. They flower at a time when bloom is scarce, making them the more valuable. I think it would pay the florists to grow this beautiful flowering plant. They all like a strong loamy soil and an abundance of water when not at rest and when exposed to bright sunlight. They are readily propagated by taking off the young shoots with a heel in early spring and placing them in propagating bed with good bottom heat. These cuttings will flower the same fall if treated properly.

POLYGALA LUTEA.—This wonderfully interesting little plant flowers with us June 1, producing a single stalk of bright yellow flowers. The interesting feature of it is the little yellow florets succeed each other on the same stalk and continue doing so for three months. It is quite a little curiosity.

C. LESLIE REYNOLDS.

Notes and Comments.

Some fine plants of Adiantum cuneatum seen recently gave an idea in treatment not usually followed. Instead of the usual loam and peat mixture they were potted in ordinary rose soil with plenty of manure. After they were growing vigorously they received a weekly dose of liquid manure. This sounds a terribly unorthodox mode of treatment, but it is an undoubted success; the fronds were superb in color and development. The plants were in pots with abundant drainage.

Finely colored Pandanus utilis were noted potted in the usual rose soil; they were making fine growth.

One of our retailing friends was a little astonished this season when asked for a plant called "The Four Seasons." However, he recovered sufficiently to sell his customer a hydrangea, that being the

article required. Can not tell who is responsible for this absurd title; hydrangea seems simple enough, but the other name crops up now and then, so it is well to bear it in mind, together with Fish Bone Geranium, Calico Bush, and such choice specimens. It is supposed—with a liberal amount of imagination—that the name of Four Seasons is applied to the hydrangea with reference to the varying colors of the bloom.

By the way, this has been a great year for hydrangeas; the blooms have kept perfect for such a length of time and the sales have been very large. Otaksa always leads for forcing, but hortensis and paniculata have sold very largely for garden and cemetery use.

Some good gloxinias are to be seen now; they make an attraction in the store windows when decorative flowers are scarce. They are admirable for small conservatories where it is desirable to have some floral display during the summer months, and may be used effectively in various decorations.

The quantity of larkspur, foxgloves, Canterbury bells and spiræas innumerable to be seen around New York this year gives one an impression that hardy plants are being very rapidly popularized. How largely these may be grown must be decided by each individual, but retailers will find some of it very convenient for cutting, apart from the sale of plants. Naturally, such flowers only bring a small price when sent into the market, as their chief use is simply in decorating the stores, but a local retailer may often find use for them when it would not pay to send the flowers into the market.

Among shrubs tried for forcing last winter was a red flowered cornus, but it did not make any great success. The flowers were not really so showy as the ordinary wild dogwood.

Sanseviera Zeylanica, the Bowstring Hemp, is seen in bedding or large vases; the singularly barred leaves are unusual in appearance and generally admired. It is a good plant for an ornamental group and readily increased by suckers.

Grevillea robusta is noted this season in large quantities, being prized for its graceful foliage in large beds, or as single specimens. It appears eminently satisfactory in bedding; it has been used largely by amateurs as well as the trade.

EMILY LOUISE TAPLIN.

Out of Town Commencement Work.

Out of town florists are rarely called upon to do large class decorations, but they find a good deal of work in supplying commencement gifts. This is rarely high-priced work, but it is sufficiently remunerative to pay for taste and workmanship. There is an occasional call for some design, harp, lyre or horse-shoe being the usual thing, but the general preference is for baskets or bouquets. Baskets always lead, however, and as a rule the purchaser wants an attractive arrangement at a small figure.

Naturally, the new and expensive styles in gilt or celluloid are useless for this class of trade, but there are plenty of attractive shapes in willow or braid, the most desirable being flaring baskets with a high handle, sometimes called Marie Antoinette baskets. There are more orders for those costing from $3 to $5 than for anything higher, though occasionally some reckless admirer will indulge in a $10 basket.

We find a strong demand for sweet peas in these baskets or bouquets, and the buyers usually like a bit of ribbon either on the handle or to tie the card in place; it doesn't cost much, and looks more expensive. It may seem unnecessary to name the ribbon, but there are localities where it is still a comparatively novel idea. When any preference is expressed as regards color it is almost invariably for pink; pink roses, pink carnations and pink sweet peas are frequently the favorites.

Though in many localities people have not got beyond a desire for stiff, round bouquets, sometimes with the added iniquity of a paper frill, we find a fancy for looser, long bunches, tied with a ribbon, and having a few flowers drooping below the stems. This is a favored commencement bouquet, and a very artistic one. The main points to be be aimed at in such work is a rather showy effectiveness, for the presentation is in public, and it is human nature to desire as good a show as possible. Greenhouse flowers are not over plentiful at midsummer, and the florist who grows good outdoor stuff will find it very useful at this time. Sweet peas, corn flowers, various pyrethrums, iberis, and other flowers of that class are very convenient for filling in, though it will be noticed that most people want a fair show of roses in their baskets. A hamper filled with roses, the lid fastened back by a ribbon-tied nosegay, takes well for a commencement gift, but naturally this would not be filled as cheaply as the average style demanded. Moss roses will be found useful in this work, and they should be plentiful.

Among greenhouse plants we find the stephanotis very useful at this season on a place where there is much floral work; it is a flower rarely seen at the wholesaler's, but it pays a man who grows for his own use. Its greatest fault is the harbor it affords for mealy bug, but the plant can be trained to take up little room and its profusion of flowers makes it very useful. Another summer blooming greenhouse shrub which we find very useful is Clerodendron Balfourianum; its clusters of white and scarlet flowers are freely produced and lasting. They are always admired when put in a mixture of loose flowers, and are not to be despised in a basket.

E. L. T.

The Leaf Blight of the Day Lily.

During all of last year the various species of funkia, of which there are many now in cultivation, for the "Day Lilies" are popular foliage and border plants, were sadly troubled with a blight that in many instances was so bad that whole beds and rows of these plants were rendered unsightly and worthless. The blight, while quite widespread upon the species, whether the broad or the narrow leaved sorts, was most abundant and destructive upon the variegated sorts and particularly the Funkia undulata var. variegata. It may be said in passing that the variegated varieties of plants generally are the most susceptible to the attacks of fungi. This is a point that may come to the surface again as the present subject is further treated.

The leaf as a rule is attacked near its middle. The texture of the foliage of the day lilies is particularly acceptable for the inroads from fungi because it is soft. Aside from the skin and veins the leaf is made up of larger cells placed loosely together and of a succulent nature. Soon after the fungus has become seated, which means that its fine threads have ramified in the substance of the leaf, the spot attacked takes on a brown appearance. Owing to the nature of the leaf, and particularly the arrangement of the veins, the diseased spot soon becomes a place with the pulp of the leaf wanting and crossed lengthwise by threads of the veins. In other words the leaves are with their centers reduced to shreds. Such foliage can neither do the ordinary work or present the healthy appearance of unaffected leaves.

It is impossible to show the microscopic characteristics of the fungus in a photographic picture. The spores are produced in great numbers in patches upon the surface of the affected parts. By actual test it has been determined that they germinate with ease in water and in this way the blight is spread rapidly from one place to another. It has been observed that when one susceptible variety grows near another less so, the former has a tendency to affect the latter. No one plant grows to itself alone and in no more emphatic manner can this fact of influence be brought out than with the fungous diseases of plants. It goes without further saying that any plant already ruined by the blight is not worthy of a place in the garden; at least all its foliage should be cut away and burned.

In case of the funkias, gardeners would do well to take note of the kinds that are least injured and should they be equal in other respects to the less fortunate sorts, to give their garden space to them.

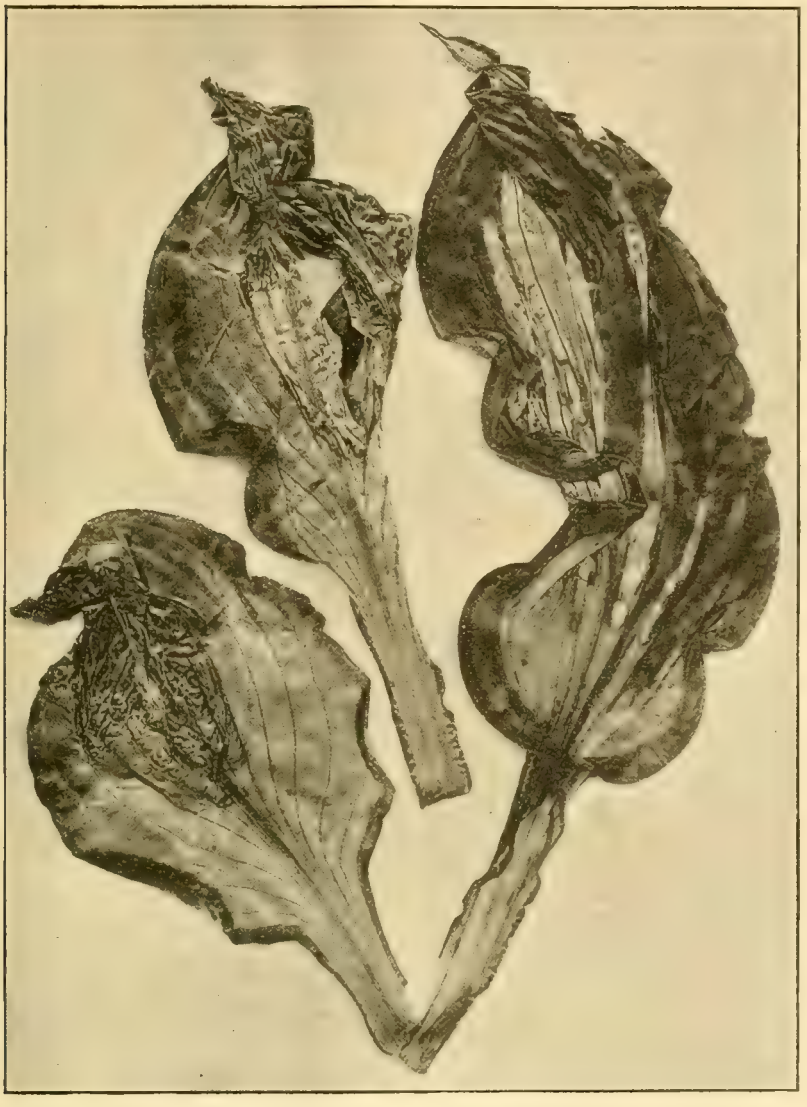
As to remedies but little thus far can be said because experiments have not been made. From the nature of the fungus there is little room for doubt that if taken early in the season the blight could be kept in check. There is nothing that can be recommended with greater hope of success than the ammonical compound of copper carbonate. This has proved of great value in the vineyard and the orchard and there is no reason why it should not be a strong weapon in the hands of the gardener.

In conclusion let those who have sickly day lilies remember the trouble is a fungus, that it favors the variegated sorts, that it spreads rapidly by means of its spores. Grow the least susceptible sorts and another year try spraying with a fungicide. The burning now of the blighted parts is a wise act.

BYRON D. HALSTED.

Rutgers College, June 25, '92.

Boston.



There is nothing to be said about the cut flower trade at present excepting that it is as dead as it can be. There is the usual summer assortment to be seen in the florists' windows, nothing of special note, and no well established price on anything. Frequent rains and cool pleasant weather have had their effect on all out door bloom and verdure and the garden, lawn and landscape are in their loveliest form.

July 2 was prize day for delphiniums at Horticultural Hall. The display of this popular and showy flower was good, first prize going to J. L. Gardner.

Among the choice things shown were Dipladenias amabilis, profusa and Boliviensis from Geo. McWilliam, and Thunia Veitchii from J. L. Gardner, the latter being honored with a certificate of merit.

The collection of H. P. roses from J. S. Fay was as usual of a high grade, and the display of hardy herbaceous plants from N. T. Kidder, Shady Hill Nursery and J. W. Manning, interesting and instructive.

The attendance at the exhibition on July 9 was quite large. It was prize day for Iris Kæmpferi. J. L. Gardner was awarded first for 15 varieties and E.

LEAF BLIGHT OF THE DAY LILY.

Sheppard & Sons first for 6 varieties. The finest bloom in the hall was a bloom of Alexandra in Sheppard's collection. Rea Bros. display of hardy herbaceous perennials was particularly good.

At a recent meeting of the Society it was voted that unsolicited special prizes must be accompanied by the amount offered or its equivalent, and in order that such prizes may appear in the regular schedule, that it is desirable to have them notified to the committee on establishing prizes on or before the first of November in each year.

When the members of the Gardeners' and Florists' Club began to gather at Horticultural Hall for the regular July meeting they were surprised to find the big doors securely locked, and after waiting in vain for the derelict janitor they repaired to the Tremont House where the famous old room 200, which has seen so many lively meetings, was secured for the evening. The time was occupied by reports from various special committees, that on the annual excursion provoking the most discussion. The committee was overwhelmingly sustained in all its arrangements and the trip will take place as before announced on July 28, and the location selected is Lake Walden.

The committee on revision of by-laws reported quite a number of changes, the principal one being the change of the time of the annual election from September to November and making the fiscal year begin with January 1.

The committee on bowling announced that a team had been selected to go to Washington to represent the club at the tournament there next August, and asked for funds to defray expenses of practice games, and their request was promptly granted.

Resolutions of sympathy with Wm. Edgar on the death of his wife were read, and the new charter just received from the Secretary of State was displayed. The last business was an overhauling of the delinquent list, resulting in the suspension of twenty five members for non payment of dues.

John Reed of Everett, Mass. is reported as having assigned.

Visitors in town are numerous. This week's list includes W. F. Sheridan, R. B. Young, C. B. Weathered, New York; W. F. Gude, Washington, Paul Berkowitz, Phila.; and J. H. Brazendale, London, England.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

New York.

There was a large attendance at the meeting of the Florists' Club last Monday evening. The report of the committee on transportation to Washington was accepted. The question of permanent club room was indefinitely postponed and the committee discharged.

Thomas Griffin exhibited magnificent blooms of tuberous begonias and described his method of treatment for outdoor culture. He invited the club to visit his place in a body, and the invitation was accepted.

Five applicants for membership in the club were admitted.

A party of gentlemen prominent in horticulture and botany were entertained on July 6 by Mr. Chas. A. Dana, of the New York *Sun*. They were received by their host at Dosoris, Mr. Dana's well known country residence. They spent a delightful day. The gardens, which are remarkable for specimen trees, shrubs and hardy plants, are in a state of perfection at this season. Among the guests present at luncheon were W. R. Smith and Jno. Saul, of Washington; Samuel Parsons and Samuel Parsons, Jr., of Flushing; Judge Brown, president of Torrey Botanical Club; W. A. Stiles, of *Garden and Forest*; Wm. Falconer, Dr. Hexamer, Chas. Henderson, and Mr. Trumpy.

The auctions are now over for the season. They have been extremely satisfactory, both for the high class of stuff sent in and for the excellent prices realized. There was a small sale of orchids last week, consisting chiefly of fine lælias, freshly imported; some of the pieces were very large. Some of the best pieces went to a Boston collection.

The flower trade can hardly be considered at all, as we have now entered on the dullest part of the dead season. A few stray orders for funerals or steamers make the bulk of the retail trade. A fair amount of stuff is coming in; there is an absolute glut of sweet peas, even the Greeks being over-loaded. Some selected roses, Brides or La France, go up to $4 a 100, but the average is much lower. Ernst Asmus and William H. Siebrecht are still sending in lily of the valley. Carnations are becoming poor. None of the retailers can afford to keep much stock on hand, and the stores generally have a very deserted appearance.

There was a meeting of the creditors of C. W. Matheson this week, but no definite arrangements were concluded. The assets seem practically nothing, excepting a considerable amount in uncollected bills.

The committee on transportation, of the florist club, met on the 11th to make further arrangements for the convention. They expect to give a warm welcome to their Boston brothers, New York and Boston being again received further along by the Philadelphia club.

Chas. D. Ball, of Holmesburg, was a recent transient visitor here.

The greenhouses of the James Taplin place at Maywood are being rebuilt and altered.

Vivid blue larkspur is to be noted in quantity; it is very handsome. Wild cattails from the Jersey meadows are not confined to the street fakirs, but are seen in most of the florists'. They form a change in decoration at least. A good many nice little araucarias are to be seen; they are very largely used in decorating.

Charles Henderson, of Peter Henderson & Co., is about to build a fine residence at East Hackensack, N. J. In addition to the residence the place will also com-

prise greenhouses and experimental grounds for the purpose of testing plants and seeds, as the business seems to be outgrowing the space at command in Jersey City.

Rudolph Asmus has been suffering in health of late, being threatened with a return of his old enemy, the rheumatism.

A recent design, made for a special order by a New York florist, was a shirt which might have fitted Grover Cleveland. It was filled with immortelles and Cape flowers, the body and sleeves being white, the collar, cuffs and bosom pink. It was to be shipped to San Francisco, where it was intended to grace the opening of a new firm. The florist intrusted with this work of art viewed it with extreme sorrow; it was calculated to be rather a trial to a firm noted for tasteful work, even in the dead season, when orders are few.

Baltimore.

Good buds continue very scarce, particularly white ones. The inferior stuff is all bought up at some price though, for the store man just now has to take what he can get for hurried orders and be thankful. For orders that give him a day or two to prepare he can usually hunt up good stuff somewhere but he is not given to saying where, so the scribe can only guess in a vague way that it is "up north". Perhaps some of our new men who are busy putting up houses can solve the problem of producing as good stuff all the year around as can be bought elsewhere, but up to date we only seem to hit it spasmodically. It may be the weather after all and not the skill of the grower, but more likely the boys are all busy getting benches and plants ready for the next winter's crop and the plants that stand over are temporarily neglected; or possibly we copy too slavishly the methods of more northerly latitudes, though this seems less likely. Whatever the cause, though no buds are strictly A 1, yet those from the north are better in size and color than any that can be had in the open market here. Almost every one seems to have a reason for it, and, if all would turn out at the next club meeting and discuss the question thoroughly, the true cause might be discovered and avoided; no harm to try any way.

Mr. Robt. L. Graham is putting in two houses of chrysanthemums on benches, principally the two varieties Domination and L. Canning. The advantages he claims are, freedom from danger of frosts, and, not being checked by lifting from the open ground after grown, much more perfect flowers and foliage at one half the cost of growing in pots. He says he is waking up to the fact that there is money in cut chrysanthemums if either early or late, and he can keep those in houses back much later than if grown outside, besides being able to fire a little when pushed by severe frost.

Society work is very light. At the wedding of the daughter of a leading banker, Mr. Stein, the decorations were rather elaborate. The stairway was trimmed very neatly by covering the balusters with palmetto leaves, and wreathing the hand rail in smilax. Smilax was used freely in the doorways of the parlors, the portieres being removed and replaced by it. The mirrors were all draped with it too except one, a pier-glass in front of which the bride received, which was draped with asparagus. The walls of the large dining room, seating 100 guests, were nearly covered with palmetto leaves arranged in fans and clusters on every available space. The ceiling was festooned with wreathing, along the lines of which electric lights were fastened, and, when ready for the wedding party, the whole room presented a very pretty and bower like effect.

Funeral work is the stand-by and almost the only hope in the way of trade. Several stores are closed; Tishinger of Madison avenue and Barron of the same street permanently; Dentry of Linden avenue till September. A Mr. Klein has taken the store formerly occupied by Barron and proposes to open August 1st as landscape gardener and florist, with a line of fine imported goods.

Now comes the time when the grower debates within himself of the demand that will exist for his specialties, whatever they may be, "when the swallows homeward fly" and society follows them. Will the market be short of dark or of light buds? Will there be the same scarcity of good smilax as last winter or will everybody get at it and reproduce the gluts of preceding years? How about Harrisii? Scarce last year to be sure, but so plenty year before that about 1,000 were left unpacked in the Exchange at Easter. What of carnations and what of 100 other things that depend so much on the whims and caprices of buyers, and upon the profitable sale of which the bank account and happiness of the grower depend so utterly?

As a remedy for alternate gluts and scarcity it has been suggested by one of the craft that each grower adopt one or two plants and grow nothing else, so that one man would grow the carnation, another roses, another bouvardia, and so on all through the list, having more places devoted to roses than anything else, and next having carnations, decreasing the amount of glass used for any one thing until men with only one house could be put at myosotis or mignonette.

It is a plausible scheme, but it is to be feared there would be some discord when the crops each was expected to grow were assigned to him, and if they were not assigned by some central authority, as committee or club, it is hard to see what benefit would result, as too many devoting themselves to one crop and neglecting all others would work more disaster to themselves and the trade than could possibly result from growing mixed crops. At some future time when the trade is as well organized as some other trades a scheme like this may be possible, but it does not seem so now.

One thing, however, is possible wherever there is a club or central organization, and that is for such a body to keep a list of the members with the number of plants of each variety of rose, of carnations, smilax, callas, violets, Harrisii, etc. he intends growing for the coming season. To be sure a list like that would be most useful to the last man on it, for, knowing the market and the ability of the men preceding him on the list to grow successfully the crops selected by them, he could form a much closer estimate of the supply and demand than is anyways possible at present.

There is very little doing in cut flowers, and fortunately, for there is no great amount of flowers to do anything with. The Exchange has been cleaned up by noon almost every day. Roses are coming in slightly better than last week, but prices are very low. MACK.

If you expect to attend the Washington convention of the S. A. F. and have not yet sent us your photograph for use in our convention supplement, please forward same now.

Washington.

In strolling through the conservatory at the Executive Mansion, where Mr. Henry Pfister, the gardener in charge, has everything in perfect order, I found Mr. P. directing the potting of a few anthuriums. He cordially invited me to take a look through the houses. He is justly proud of his orchids, which are in very good shape. Noticeable among them were two very fine specimens of Vanda teres Andersonii. The larger of the two was in a 12-inch basket and had 25 spikes of bloom, some spikes bearing 6 and 8 flowers. Neither of the plants were over three feet high. The flowers were large, rich and deep in color. I noticed a small but very healthy plant of Dendrobium Phalænopsis Schroderii with several beautiful flowers on it. I am inclined to think that this is the only plant in the city and am sure it is the first time this dendrobium has been flowered in the District of Columbia. Cypripedium Io with its beautiful dark flower attracted my attention, also a fine plant of C. caudatum with three large beautiful flowers of its peculiar kind, its string-like petals being 20 inches or more long. I noticed a dozen or more Ficus elastica with single stems 16 feet high, furnished to the pots with leaves. I was told that they filled shallow corners in the state dining room (where palms and such things could not be used) producing a good effect. They have a sago palm said to be the oldest under cultivation. It is 200 years or more old, trunk about 8 feet high and 14 inches in diameter at base. It flowers every second year, making leaves the off year.

The grapery hanging with fruit just turning looked very tempting. The bunches were not extra large but well distributed over the entire vine. The vines are old, having been planted during Gen. Grant's term at the White House, and the bed has never been renewed. I saw many other plants worthy of notice, all showing a high state of cultivation and doing credit to Mr. Pfister.

Everything is very quiet among the florists. They all seem to be taking advantage of the lull and doing the necessary repairs to their houses and getting everything in shape for fall and winter trade.

Mr. Wm. R. Smith, Sup't Botanical Garden, is spending a few days about New York. C. LESLIE REYNOLDS.

Philadelphia.

The July meeting of the Florists' Club was well attended. Quite a number of new faces were seen while some of the regulars were conspicuous by their absence.

The membership of the club is rapidly increasing. Seven names were placed in nomination for election at the August meeting, while the following gentlemen proposed at the June meeting were elected: George Carpenter, Oliver J. Poppy, John Culp, James McClane, of Phila., and Geo. A. Strochlein, of Riverton, N. J.

The principal business of the meeting was hearing and discussing the reports of committees in relation to the convention. Mr. Westcott of the committee on transportation reported that his committee had made very favorable terms with the Pennsylvania company, having obtained a round trip ticket good for ten days for $4. The company had also been very liberal in other respects, of which the committee would have more to say later on. Mr. Ball of the committee on hotel

accommodations reported having made good terms with the "Corcoran," which he described as first class in every respect. After considerable discussion this hotel was made the headquarters of the club.

Richard Heron and George Craig were appointed a committee on decoration, their business being to see that the special train carrying the delegates shall be decorated as befits the occasion and we have no doubt but that it will be made most attractive, both within and without.

The old committee on essays and publication, Messrs. Lonsdale, Bearn and Fancourt, is no more. This committee has stood without change since its appointment shortly after the organization of the club. At their urgent request they were discharged and Robert Kift, Joseph Heacock and A. B. Cartledge were appointed in their stead.

Wm. F. Gude and J. Grainer, of Washington were present. Mr. Gude was called on and made a few remarks in which he expressed much pleasure at being present and extended a general invitation to all present to come to Washington. He assured them that the boys there would do all they could to give them a good time.

Wm. E. Meehan, son of Thos. Meehan, who was at one time engaged in the commission cut flower business in this city, but is now connected with the *Public Ledger*, has gone with the Peary relief party to North Greenland, partly in the interest of the paper and as the botanist of the expedition. Mr. Meehan was always fond of adventure and will no doubt have a very exciting time, as well as add considerable to his botanical knowledge. His collection of specimens will no doubt be well worth seeing.

We will not say anything about business except to mention that white roses are very scarce and so small they are scarcely seen when found; valley also requires hunting up, it being in demand at $6.

David Cliffe, of Germantown, is building six new greenhouses. Four will be 18x121 each and the others 18x76 each, a total of 26,700 square feet of glass. A new office building will also be erected. This will be 18 feet square with bulk windows. On the front will be a show room 72 feet in length, for the display of palms, orchids and tropical plants. Work has already been commenced and the new structures will be completed in about six weeks. K.

Cincinnati.

The monthly meeting of the Cin. Florist Society was called to order July 9 by temporary chairman, R. J. Murphy. Several applicants were elected as members. This meeting was the best we have had for several months and shows that the interest is still alive. Owing to indisposition we were unable to have our worthy president with us.

Two weeks ago the Almighty Ruler of the Universe saw fit to remove from among us Bro. G. F. Brunner of Price Hill. His death was very sudden, heart trouble being the cause. I have been unable to procure further particulars at this writing.

Chas. Jones, a brother florist of Newport, Ky., mourns the loss of his son Frank, who will be buried tomorrow afternoon. He was a young man of good habits and the main help of his father in carrying on the business. These are with one exception the only deaths that have occurred among the florists in the last two years.

Mr. Albert McCullough has just returned from his trip abroad, and at our next meeting we hope to be favored with an interesting talk from him concerning the old country.

Mr. F. T. McFadden, who spends much of his time in New York, is at home at Rosebank.

Since sending out the advance premium list of the Floral Exhibition (which will be held the 2nd week in Nov.), there has been a special list printed, which contains $500 additional premiums, which are offered for the best group of cannas, 50 plants; the best dining room decorations; the best collection of not less than twenty five plants cyclamen; and best fifteen varieties of begonias. Also five cups, value not less than $25 each, given by several prominent ladies of Cin. These special cup prizes for seedlings are announced to take the place of classes 23, 24, 25 and 26 of the advance premium list. The 5th cup is to be given for the best bronze variety. Unusual interest is being manifested in this exhibition, and we propose to give the grandest display ever seen in the west.

Trade in our city, like our sister cities, is very quiet. Stocks in cut flowers are very poor at best, but our growers are all busy replanting and their young plants look unusually fine.

J. A. Peterson is building several fine houses for the growing of cut flowers.

Quite a number of our florists will attend the Washington meeting. We should also like to see a meeting of the different Florists' Clubs of the United States and Dominion called for the purpose of comparing notes and getting pointers as to the best mode of conducting Florists' Societies. E. G. GILLETT, Sec'y.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

The Street Trees of Washington.

To no man does the city of Washington owe a greater debt of gratitude than to W. R. Smith. Washington without her street trees would be almost uninhabitable in summer and those trees should never be mentioned without in some way coupling with them the name of the man who is so largely responsible for their existence. Mr. Smith is justly proud of them now and never tires of showing and talking about them. They are his monuments, he says.

Speaking of Populus Græca, which he highly recommends as one of the nicest trees for narrow streets if kept severely trimmed, he tells a good joke at his own expense. He bought this tree some years ago as a botanical curiosity. The name Græca had a pleasant flavor of antiquity, and with his natural enthusiasm for ancient as well as modern, he felt particularly interested in this instance as he reflected that this tree was doubtless a representative of ancient Grecian forestry. He planted it on the banks of the old canal and was delighted to find it a neat, ornate tree, its only fault being a tendency to sucker. Later on when about to plant trees for the Parking Commission he decided to recommend using some of this populus. In order to be able to talk intelligently and eloquently on its history he hunted through Sibthorp's Flora Græca but found that there is no poplar a native of Greece. After further investigation his veneration received a severe shock on ascertaining that the tree received its name, Græca, from having been found wild in the vicinity of Athens, Ills.

Mr. Smith and Mr. Saunders are both enthusiastic lovers of the oak, the American oaks especially. Where triangles occur at the junction of streets the spaces are frequently planted with these oaks

H. AUGUSTINE, PRES. AM. ASS'N OF NURSERYMEN.

and they do finely, but Mr. Smith asserts that few if any oaks are fit for curbstone trees.

The English sycamore maple has done better this season in Washington than it has done for years, doubtless on account of the cool spring. It is short lived here but in Fryeburg it is said to live 400 years.

Paulownia imperialis is one of the most beautiful of spring flowering trees in Washington. For more northerly localities Mr. Smith recommends raising it from seed, growing it in pots the first season, storing it through the winter, and then planting it out for subtropical effect the second year.

Cupressus Lawsoniana has suffered severely in Washington during the past winter, many specimens as much as ten years of age having been killed outright. The winter has been a very severe one on evergreens generally, but Mr. Smith's theory is that such barely hardy species are less likely to get winter killed when small than they are when they get well established and have come to their period of most vigorous growth, the new wood being then formed too rapidly to ripen up well.

Mr. Smith is not a profane man by any means, but he comes very close to it when he sees any of his pet trees chewed up by horses. Fortunately the police authorities are in hearty sympathy with him and do what they can to appease his wrath and prevent a repetition of the aggravation by soaking the owners of the offending horses for $5 and $10 at every opportunity.

Among the least satisfactory of the street trees in Washington are the tulip trees. These are very unhealthy in certain places, and Mr. Smith's experience is that they are not adapted for curbstone planting.

The photograph of the big Grass Bed at the Botanic Garden which was recently published in the AMERICAN FLORIST has been the cause of numerous applications to Mr. Smith for stock of the grasses named. He suggests that readers of the FLORIST having these things for sale would be wise to advertise them in its columns. This, he says, would prove a source of relief and comfort to him, besides increasing materially the sales of the advertisers.

One of the most interesting of the beds at the Botanic Garden will this year contain a collection of ficuses. Not less than thirty species will be represented.

A large bed of Indian, Belgian and native azaleas mixed has been very showy this spring. Mr. Smith intends to plant here every variety he can lay his hands on, with the intention of making a feature of it for the purpose of raising seed from chance hybridization.

THE Omaha Nursery Company has been incorporated with headquarters at Portal, Neb. Capital stock $20,000. Incorporators F. W. Taylor, E. H. Barbour, R. B. Owens, John Dugan.

YOU CAN'T AFFORD to do business without a copy of our new trade directory and reference book.

The World's Fair.

The Horticultural Department continues to make rapid progress in spite of the extraordinary wet season. The continuous rains have of course retarded the outdoor work considerably and have also done considerable damage by flooding and drowning out of some stuff already planted, nevertheless everything with few exceptions looks remarkably well.

The department is constantly receiving consignments of various kinds of stuff, though few large specimens of plants are coming in so far.

Mrs. A. C. Hurd, of Havana, Ill., sent in a splendid specimen of the night blooming cereus. The plant stands fully 12 feet high and is in fine condition. Mr. Thorpe would like to obtain a dozen or more such specimens, so as to be able to make a feature of them. A group of these plants in full bloom would prove quite an attraction in the evening.

One of the courts of the Horticultural Building will be devoted to a display of aquatics, the plans of which are now being prepared. Like everything else, this display will be as extensive and complete as it is possible to make it.

In orchids the show promises to be a very extensive and complete one. Special preparations are made by orchid growers to have such varieties represented in bloom during the months of the fair as ordinarily would be in flower in midwinter and early spring. A few shipments are already in and will be cared for and treated by the department. The list includes a lot of Cypripedium Chamberlainianum and Cattleya Mendelli; also a small collection of such varieties as Chysis bractescens and C. aurea, Brassia vermosa, Brassavola glauca, Lælia anceps, L. albida, Lycaste Deppei, Barkeria elegans, oncidiums, odontoglossums, epidendrums and many others.

Tuberous rooted begonias are given a trial this summer for outdoor bedding. About 1,000 plants of these were raised by the department from seed this season. The strongest plants have already been planted out and are doing very well. If a success in our climate a large show will be made next season.

A fine lot of Crozy cannas are just coming into bloom and promise to make a fine display.

The rose garden on the island is looking very fine. Most of the varieties are in bloom now. Among the most showy at present are such kinds as American Beauty, Her Majesty, Anna de Diesbach, Paul Neyron and others. In this class the California exhibit certainly looks the strongest and most thrifty of the whole lot. The standard varieties look rather weak.

A fine collection of clematis from Holland, some 50 varieties, including all the latest novelties, are just coming in bloom. If these plants, some varieties of which are quite tender, can be wintered successfully, they will certainly make a magnificent show next summer.

Chrysanthemums with Variegated Foliage.

We have received from Mr. B. F. Sill, Astoria, N. Y., some chrysanthemum leaves very prettily splashed with white. They were submitted to Mr. John Thorpe who writes as follows:

"The variegated chrysanthemum is not a rarity. Raisers of seedlings frequently have variegation among the yearlings. A really good marginal variegation would be valuable, but the splashed forms have proved too unreliable. Some years ago, in England, there was a pompon chrysanthemum with variegated leaves resembling those of Mountain of Snow pelargonium. This was used as a ribbon line in bedding. Its name was Progress and it was sent out by Bull in '58 or '59."

OBITUARY.

JACQUES JULIEN MARGOTTIN, better known as Margottin pere, died May 13, at his home at Bourg la Reine, France, in his 75th year.

Left an orphan at the age of 14, and without the means of subsistence, he entered upon his profession as a gardener's boy, and by slow degrees attained the eminent position he held among French horticulturists. He had the good fortune to work under M. Boscary, M. Keteleer and later as head gardener at the Luxembourg Gardens under the direction of M. Hardy pere. In 1840 he married and established himself as a rosarian at Ivry, and in 1859 bought his final establishment at Bourg la Reine. An original member of the National Society of Horticulture of France, as well as a large number of other societies, as well as municipal councilor since 1860, he was highly esteemed. He originated a large number of good roses, among others, in 1853, Jules Margottin, which made him a great reputation, and from which are descended most of the finest known sorts. Among others of his raising are Charles Turner, Duchess d'Aoste, Gloire de Margottin. He produced 76 new roses in all, the majority of which were hybrid remontants.

Many prizes have been awarded to the results of his skill, and in 1878 the decoration of the Legion of Honor crowned the series of his successes.

JEAN KETTEN.—Born at Sept-Fontaines near Luxembourg, June 1, 1848, was devoted to horticulture from his very youth. Passed his apprenticeship at Metz, making a specialty of landscape gardening, which he abandoned later, entering into partnership with his elder brother, who founded in 1867 the present well known rose growing establishment. An indefatigable worker, a gentle and loyal character, Jean Ketten had only friends among his many colleagues. He succumbed to typhoid fever, after 18 days of illness, on the 11th of May last.—*Journal des Roses.*

News Notes.

DELTA, COLO.—C. J. Hansen, formerly of Globeville, will start in the business here.

NEW BRITAIN, CONN.—Wm. H. Relyea is no longer in the trade. The greenhouses are now without a tenant.

ST. PAUL, MINN.—Venzke Bros. have dissolved partnership. Mr. L. G. Venzke will continue the business.

OMAHA, NEB.—Mr. and Mrs. Donaghue and Mr. and Mrs. Swoboda started recently on a trip to Europe to visit friends.

SIOUX CITY, IA.—Robert Baur will open a cut flower store here July 15. Mr. Baur was for several years in the employ of F. Morats' Sons of Louisville, Ky.

VALLEY FORGE, PA.—Spring business was very good. R. Lauterbach is building two new rose houses, one 125x35 and the other 60x24. This gives him a total of 13,000 feet of glass.

CHICAGO.—Among recent visitors were John Miles, Ripon, Wis.; J. Hess, Omaha, Neb.; W. T. Hempstead, Bloomington, Ill.; Mr. Coe, of Coe & Converse, Ft. Atkinson, Wis.; W. L. Morris, Des Moines, Ia.; J. D. Carmody, Evansville, Ind.; J. M. Jordan, St. Louis.

RACINE, WIS.—Florist F. Fountaine has issued a premium list for his second annual chrysanthemum show, to be held next November. None but amateurs can compete, and in the same pamphlet he gives a list of young chrysanthemum plants for sale, with prices attached.

The Seed Trade.

CHICAGO.—Among recent visitors were Jas. W. Hogg, of the Steele Bros. Co., Toronto; Frank T. Emerson, Omaha; J. C. Robinson, Waterloo, Neb.; Benj. Hammond, Fishkill-on-Hudson, N. Y.

IN OUR new trade directory there is a total of 7,336 names and addresses. Of these 3,593 are general florists who both grow and retail; 562 are florists who grow for wholesale trade only; 434 are store florists who are dealers only and have no glass; 34 are wholesale commission dealers in cut flowers; 1,590 do an exclusive nursery business; 584 combine the business of nurseryman and florist; 282 are seedsmen; 172 are seedsmen and florists; 27 do both a nursery and seed business; and 58 combine all three trades. Of the florists, both exclusive and those who combine it with one or more of the other trades, there is a grand total of 5,437; of the nurserymen, classed also as above, there is a total of 2,259; and of seedsmen 539. To reach all possible buyers of florists' plants (F., F. Gr., N. F., F. S. N.) it will take 4,797 copies of your catalogue or price list; to reach all possible buyers of supplies used in making up flowers, etc., (F., F. St., N. F., S. F., F. S. N.) 4,841 copies will be needed; to reach all possible buyers of nursery stock (N., N. F., F. S. N., N. S.) you will want 2,259 copies.

St. Louis.

July has been cold and wet. The flower trade has reached the summer standard. Roses are small and poor.

Mr. Klokenkemper, of the city park department, is getting up plans for three new houses to be erected in Forest Park for growing bedding plants.

Ellison & Kuehn have dissolved partnership. Mr. Kuehn will continue the manufacture of wire designs and the commission business at the old stand. Mr. Ellison will open a commission house about September 1. J. C. DUFFEY.

GEORGE W. MILLER,

1748 N. Halsted St., CHICAGO, ILL.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

JOHN IRVINE CO.,

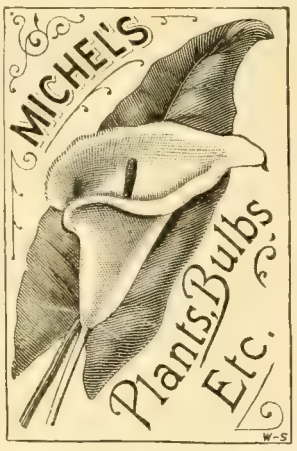
BAY CITY, MICH.

TUFTED PANSIES.

(Hybrids of Pansies and Alpine Violets)

The great bedding plant of England. Mixed seed from Dickson & Co.'s magnificent collection of over 100 named varieties. 500 seeds $1.00.

BURR'S INTERNATIONAL PANSIES.



There is a touch of all the great specialties here. I guarantee this seed to produce as large a variety of choice pansies (for the quantity sown) as can be bought of any seedsman in the world. If it fails to do so, will take your word for it and refund the price paid. 1000 seeds $1.00. Write to-day as this adv. will not appear again. **Charles L. Burr, Springfield, Mass**

MICHEL PLANT AND SEED CO., ST. LOUIS, MO.

EVERY FLORIST IN THE LAND

Should have a good bed of the New Giant Forcing

DAISY SNOW CREST

Introduced by Mr. H. A. Dreer.

We are Headquarters, and have 20,000 plants to offer at $1.50 per doz.; $10 per 100; $80 per 1000. It is easily and rapidly propagated by cuttings and division, and **NOW IS THE TIME** to get up a stock for fall planting. It is double the size of Snowflake and vastly superior in every way. Many of the blooms were larger than a silver dollar as we grew them last winter. It is a free and constant bloomer, requiring the same conditions as violets.

We also have a heavy stock of **Snowflake** that we wil close out at $1.50 per 100; $12 per 1000, for the next three weeks.

Yours very truly,

J. C. GIBSON, Woodbury, N. J.

Toronto.

The first trip outside his own domain which the undersigned has made this year was to Exhibition Park where is located the domicile of Mr. John Chambers, City Park Superintendent, and also the greenhouses and frames for growing the bedding plants for all the city parks. Mr. Wm. Lightfoot, the able head gardener, was found still in the throes of bedding out, the late excessively wet weather having delayed operations; in fact water was still standing in the edges of some of the beds. The stove and greenhouse plants were all looking in fine condition, especially the ferns, of which there is a valuable collection. Amongst the orchids in flower I noticed several good pieces of Saccolabium præmorsum, Vanda cærulea, Maxillaria grandiflora, etc. I must also mention a lovely fancy caladium labelled Marajo, quite a gem.

Island Park was also visited and found to be looking green, fresh and gay with flowers and picnic parties. Those who remember this island 20 years ago must admit that John has done wonders with the sandy desert he had to work on, and improvements are still being made every year according as the city doles out the funds.

To finish out the day Mr. Robt. Mearns, florist of Parkdale, was next called on. He was found just starting out for the bush on a native fern hunt. He, along with Mr. Gilchrist, florist of Toronto Junction, intended taking advantage of the cheap Christian Endeavor excursion to New York in order to visit all the leading florists' establishments in and around the city.

The next day the cars were taken for the town of Guelph, about 50 miles from Toronto, where is situated the Ontario Agricultural College, the gardens of which have for the last 12 years been under the charge of Mr. James Forsythe, formerly of Toronto (Normal Schools). A fine range of greenhouses has just been erected to supersede the old ones which were heated by flues and are decidedly antiquated. The new range positively made one envious; it is capable of growing some fine stuff. The capacious lawns were looking their greenest and many specimen trees planted about appeared to be well looked after and growing luxuriantly. Mr. Forsythe has planted lately a good many of the Colorado blue spruce (Picea pungens) which will be very effective when they grow larger; they seem to be quite at home. There is also a long herbaceous border containing about 500 species. Mr. Forsythe being unfortunately confined in the house with rheumatic fever was unable to show me about or I should no doubt have many more interesting features to record. E.

GIANT PANSIES.

It's the **BIG PANSIES** that "take the cake" now. The best is none too good for your trade. The plants I offer are the Zirnglebel strain—best there is. It costs more than strains ordinarily sold, but I offer strong stocky seedlings. August delivery and later, at usual price: 75 cts per 100 by mail; $5 00 per 1000 by express. Strong transplanted plants, many of them showing bud, $1 25 per 100; $10 00 per 1000.

ALEX. McBRIDE, Alpiaus, N. Y.

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

L. B. 338. **ALBERT M. HERR, LANCASTER, PA.**

From Chicago to Washington.

The Chicago Florist Club has secured a special low rate from Chicago to Washington over the Pennsylvania R. R., unquestionably the best route, and the train selected will take the party over the Allegheny mountains during the day time so there will be opportunity to fully enjoy the magnificent scenery. Florists in the west and northwest are cordially invited to join the Chicago party and share in the advantages secured. Berths may be reserved by addressing any member of the committee, whose names follow: G. L. Grant, 322 Dearborn street; J. C. Vaughan, 146 W. Washington street; P. J. Hauswirth, 318 Wabash avenue.

YOU CAN never invest $2 to better advantage than in a copy of our new trade directory and reference book.

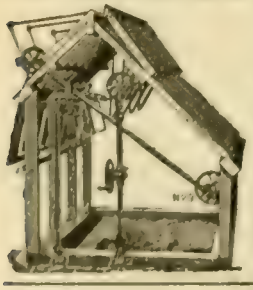
Buffalo.

Business is now very quiet. Our city is such a cool delightful place in the summer months that no one ever dies here at this season, making funeral orders quite scarce. Stores are closing at 6 o'clock and there is a general let up of business in all departments. Florists are visiting each other nowadays and the talk is either of Washington or how are your chrysanthemums. A visit to the beautiful Niagara Hotel and the private gardens of Mr. Lewis gave us a sight of some remarkably fine chrysanthemums; standards 5 to 6 feet high, with spreading heads and stems like walking sticks. Mr. Valentine Hamman, the able gardener, has worked very hard at the Niagara and has got all departments in excellent order. Mr. G. S. Pickelman with the help of the veteran G. McClure has also a fine lot of "mums," and Palmer & Son, J. H. Rebstock, Scott and several others are in the race.



Some of the Main street flower stores have good displays of Japan lilies, gloxinias and tuberous rooted begonias. After considerable experience we find the begonias a poor store plant; drops its flowers at once. But the gloxinia seems to thrive about as well in a dwelling house as it does in a greenhouse. Several thousand have been grown here this summer and they sell well in 5-inch pots at 75 and 50 cents each.

At the last meeting of our club a committee was appointed to arrange for transportation to Washington. We are in hopes that the Toronto men can and will come our way, and with our united forces, and most likely a few from Rochester, charter a sleeper from Rochester over the Northern Central R. R. It would be a most enjoyable way to travel, and if that lively youth Foster of Hamilton began to cut up too much we should have the sedate George Vair with us to call him down.

I have noticed a marked improvement in the appearance of several of our florists recently. Moustaches dyed, etc. On inquiring the cause I find they had been to the photographer to have their pictures taken for the AMERICAN FLORIST. G. S.

THE several hundred photgraphs that we have in hand for our convention supplement show the members of the Society of American Florists to be an unusually fine looking body of men. We question whether any other trade organization could present so good an appearance. There isn't a "dude" or a "pretty" man in the whole lot, but every face shows character and manliness.

CONVENTION SUPPLEMENT

GoodellHH Mass Agri Col 15 Dec 92

Our Annual CONVENTION SUPPLEMENT will be published with the

AUGUST 11 ISSUE.

It will contain the portraits of the majority of those in attendance at the Washington meeting, arranged in such form as to serve us as a means of mutual recognition, and will be frequently consulted by all at the meeting. It will also contain much other information of value, and will unquestionably be an exceptionablly valuable advertising medium.

ADVERTISEMENTS for the Supplement should be received by **August 4 at latest,** and as much earlier as possible. **Rates** same as in the body of the paper: **10 cents per agate line; page $42; half page $21; column $14; half column $7; inch $1.40.**

Being mailed with the August 11 issue it will reach members before they start for the Convention, and will be their friend, philosopher and guide on the way to and during the meeting. Extra copies will be distributed at the Convention.

SEND IN YOUR ADVERTISEMENTS EARLY.

PRELIMINARY CONVENTION PROGRAM.

TUESDAY, AUGUST 16, 1892.

Opening Session 10 a. m.—Address of welcome. Response. President's address. Reports—Secretary, Treasurer, Standing Committees, Special Committees. Miscellaneous business. Discussion of President's address.

Evening Session 7:30 o'clock:—

ESSAY.—Club root on roses and other plants; its cause and probable remedy. Prof. Byron D. Halsted, Agri. College, New Brunswick, N. J.

Discussion.

ESSAY.—Insect pests in the greenhouse; their cause. John Saul, Washington, D. C.

Discussion.

WEDNESDAY, AUGUST 17, 1892.

Morning Session 10 o'clock:—

Selection of place of meeting and nomination of officers for 1893. Reports of exhibition committee.

ESSAY.—The propagation of roses. Paul Pierson, Scarborough, N. Y.

Discussion.

ESSAY.—The European bulb market and the American buyer. John Reck, Bridgeport, Conn.

Discussion.

Selection of State Vice-Presidents for 1893.

Evening Session 8 o'clock:—

ESSAY.—Hybridization and the improvement of plants and flowers. Richard Bagg, Bridgeton, N. J.

Discussion.

The Question Box.

THURSDAY, AUGUST 18, 1892.

Morning Session 10 o'clock:—

Election of officers. Review of new plants. Wm. Falconer, Glen Cove, N. Y.

ESSAY.—Flowers for holiday demands. Henry Young, St. Louis, Mo.

Discussion.

Evening Session 8 o'clock:—

ESSAY.—Floriculture for children as a means of increasing and diffusing a knowledge and love for flowers. Robt. Farquhar, Boston, Mass.

Discussion.

The Question Box.

Deferred business and final committee reports.

FRIDAY, AUGUST 19, 1892.

In the forenoon a trip to Mt. Vernon by invitation of the National Gardeners' Club. In the afternoon the bowling contest.

THE QUESTION BOX.

The following subjects for the question box have been already sent in, and together with those placed in the box during the sessions, will be assigned to gentlemen competent to reply to them, on the evenings of the second and third day.

SUBJECTS.

What are the best 12 varieties of carnations for commercial purposes?

What are the best 12 hybrid roses for bedding purposes?

What are the best 12 monthly or everblooming roses for amateurs?

What are the best 12 palms for florists' use?

What are the best 12 ferns for florists' use?

What are the best 12 orchids for florists' use?

What are the best 12 hardy herbaceous plants for cut flower purposes?

Has the steaming of tobacco been found effectual in the killing of greenfly with no evil results.

What are the best materials for shading on glass in summer and how applied?

How to mend a hose?

What admission fee for chrysanthemum shows is likely to bring the best results in cities of from 100,000 to 200,000 population?

How can Florists' Clubs be best managed for the interest of their members?

What measures should the society take for the protection of its members from outside sharks?

THE TRADE EXHIBIT.

The accommodations for the society headquarters, the meetings and the trade exhibit are all under one roof, the location being the National Rifles Armory on G street, between 9th and 10th.

The space available for the exhibition is not large and already several large sections have been applied for and reserved. Intending exhibitors should lose no time in securing needed space. The rule of "first come first served" will be adhered to. Application should be made to C. F. Hale, 719 14th street, who is superintendent of this department. Applicants should state number of square feet required, the kind of goods to be exhibited and whether floor or wall space is preferred. A printed copy of the rules governing the exhibition will be mailed by Mr. Hale to those who request it.

Entertainment Program.

Below is the program adopted at the regular meeting of the National Gardeners' Club held July 12:

TUESDAY, JULY 16.—Between sessions arrangements will be made for visiting the National Museum, Smithsonian Institute, Agricultural Museum and grounds, Bureau of Engraving and Printing, Washington Monument and grounds; in the evening a musicale at the hall. Refreshments will be served after the musical entertainment.

WEDNESDAY.—We will visit the White House and grounds, State, War and Navy Departments in the forenoon. In the afternoon a reception will be held at Hon. John McLean's Park. It is the earnest

desire of this club that every member of the Society of American Florists attend this reception, that they may have an opportunity of an introduction to each other and become more intimately acquainted.

THURSDAY.—A visit to U. S. Botanic Gardens and the Capitol. Arrangements have been made to have a photograph of the society taken with the Capitol some distance in the background. We intend having a picture of the society and not of the Capitol. The site to be selected by the artist.

FRIDAY.—The morning will be devoted to a trip down the Potomac to Mount Vernon, the tomb of Washington and his old homestead. The afternoon will be devoted to the Bowling Clubs. In connection with this, I will state, that the Washington Florist Bowling Club have been specially fortunate in securing the magnificent alleys of the Columbia Athletic Club, through the untiring efforts of Mr. J. R Freeman. These alleys are simply perfect in all their points and I don't think even the most fastidious bowling crank can find anything to growl at.

The Eastern Special.

The special train which has been arranged for by the combined committees of the New York and the Philadelphia Florists' Clubs from New York to Washington over the Pennsylvania R. R., will be the biggest thing of the kind on record. Satisfactory arrangements have been completed between Boston and New York, and the Boston delegation will join the New York party on Monday morning, August 15, at Jersey City, obtaining the same low rate of fare between New York and Washington as has been granted to the New York people.

The following is the running time of the special train: Leaving from foot of Cortlandt street, N. Y., at 10:20 a. m. Monday, August 15. Stopping at Newark, 10:49; at New Brunswick, 11:20; Trenton, 11:52. Arriving at Philadelphia at 12:40. Leaving Philadelphia at 2:40, and due in Washington about 6 p. m.

The fare for the round trip, New York to Washington and return, will be $6 50. *These tickets can not be procured at the R. R. station.* Parties wishing to join in New York or New Jersey should write to J. N. May, Summit, N. J., enclosing $6 50 for each person going and tickets will be forwarded immediately. That ample accommodations may be secured for all, parties are requested to give not less than three days notice of their intention to go. Tickets will be good on any train of the Pennsylvania R. R., and should anything prevent the holder of the ticket from going the money will be refunded upon presentation of the ticket to Mr. May immediately after the date given. Parties wishing to join at Philadelphia should arrange with Mr. John Westcott, 1518 Chestnut street, Phila.

From Chicago to Washington.

The Chicago Florist Club has secured a special low rate from Chicago to Washington over the Pennsylvania R. R., unquestionably the best route, and the train selected will take the party over the Allegheny mountains during the day time so there will be opportunity to fully enjoy the magnificent scenery. Florists in the west and northwest are cordially invited to join the Chicago party and share in the advantages secured. Berths may be reserved by addressing any member of the committee, whose names follow: G. L. Grant, 322 Dearborn street; J. C. Vaughan, 146 W. Washington street; P. J. Hauswirth, 318 Wabash avenue.

Washington Hotels.

Below are given the names and locations of the hotels with which rates have been made by the local committee for convention week, together with the rate per day secured:

Made's, cor. 3d street and Penna. avenue, N. W., American, $2.

Belvedere, N. W. cor. 3rd street and Penna. avenue, American, $2; European $1 and upward.

Reuter's, 4½ street and Penna. avenue, American, $2; European, $1.

Meyer's, 470 Penna. avenue, N. W., American, $2; European, 75 cents.

Metropolitan, Penna. avenue, bet. 6th and 7th Sts., special rate, American, $3.

Ebbitt, cor. 14th and F streets, special rate, $3, no charge for parlors.

St. James, cor. 6th street and Penna. avenue, N. W., European, $1 to $3.

Howard House, cor. 6th street and Penna. avenue, special rate, $2.

Randall, S. E. cor. 15th street and Penna. avenue, American, $2.50.

Riggs, cor. 15th and G streets, N. W., American, $3.

Arlington, Vermont avenue and H St., N. W., special, $4.

Welcker's, 15th street near Penna. avenue, N. W., American, $3; European, $1.

Hotel Johnson, cor. 13th and E streets, N. W., European, $1 to $2 50 each.

Willard's, cor. 14th street and Penna. avenue, American, $3 and upward.

American House, cor. 7th street and Penna. avenue, American, $2.

Cochran, cor. 14th and K streets, N. W., American, $3.

Normandie, cor. 15th and I streets, N. W. Special, $3.50.

Oxford, cor. 14th street and New York avenue. Special, $2.50.

Hillman House, North Capitol street, bet. B and C streets, N. E., $2 and upward.

National, cor. 6th street and Penna. avenue, American, $2.50; European, $1.

Chairmen of Committees of the National Gardeners' Club of Washington for S. A. F. Convention.

Reception—W. R. Smith, U. S. Botanic Garden.

Executive—Benj. Durfee, 909 F street.

Exhibition—C. F. Hale, 719 14th St.

Hotel—J. R. Freeman, 612 13th St.

Entertainment—W. S. Clark, Bladensburg Road.

Badge—W. H. King, Wenthorpe Heights D. C.

Bowling—J. R. Freeman, 612 13th St.

Decoration—J. H. Ley, Anacostia, D. C.

Advertising—C. F. Hale, 719 14th St.

Bureau of Information—C. Leslie Reynolds, 1718½ 10th St., N. W.

Washington.

Mr. Wm. Galt, the bachelor member of the firm of Galt Bros. & Co., jewelers, has presented the Gardeners' and Florists' Bowling Club of Washington a very handsome "Loving Cup," the same to be bowled for at the coming convention of the S. A. F., the inscription to be engraved upon the cup after the contest. This cup is worth $75. The successful club may well be proud of it.

Everything at this end of the line in connection with the convention is progressing satisfactorily to the local club. The various committees are hard at work with but one aim in view—success.

Mr. Hale and his committee on printing are highly pleased with the progress being made on the souvenir; it is now in the hands of the printer and is to be ready August 1.

The cut flower trade is at a standstill at present. Flowers plentiful but poor in quality. Weather very warm with plenty of rain, making a fine growing season and causing the many flower beds throughout the city to look unusually well.

Mr. Wm. J. Stewart, Sec'y S. A. F., made a flying visit to the city last Sunday, leaving early Monday morning. Convention matters brought him here.

C. LESLIE REYNOLDS.

Boston.

A week of extreme dullness in the cut flower trade. Roses in general are of poorest quality. Souvenir de Malmaison is about the best rose coming in at present. This is always a good summer rose. Carnations are getting quite scarce, but the demand is so light that the scarcity is not noticeable, excepting by the boy who has to empty the rubbish barrel and finds it not so heavy as formerly. Sweet Peas are still plentiful and the street fakirs manage to get rid of a very large quantity of them. Pink pond lilies somewhat overstocked at present. Achillea, gypsophila, candytuft, stocks and other summer stock is coming in by the bushel. The new achillea "The Pearl" is received with considerable favor.

Tickets to the Gardeners' and Florists' Club picnic have been set at $2.50 for gentlemen and $1.50 for ladies, including dinner at the grove. A large turnout is expected.

Saturday, July 16, was hollyhock day at Horticultural Hall. The finest blooms came from J. S. Fay and N. T. Kidder, the prizes being all awarded in that order. One of the most interesting features was a very complete collection of wild flowers from Mrs. P. D. Richards. John L. Gardner showed some nice plants, among which were Ixora Williamsii, Dendrobium Dalhousianum and Platyclinis filiformis, the latter bearing 62 spikes of flowers.

The creditors of J. P. Clark have held several meetings, W. H. Elliott, John D. Twombly and John Fee being appointed a committee of investigation. Mr. Clark offered 15% in settlement. This has, after consideration, been refused by the committee, who recommended a settlement on the basis of 25%. Most of the creditors have already agreed to accept the latter proposition and it will probably go.

It has been arranged that the New England delegation to Washington will leave Boston via the Fall River line at 7 p. m. Sunday, Aug. 14, joining the New York delegation at Jersey City, from which place a special train will convey the entire party via the Penna. R. R.

The price of tickets Boston to Washington and return will be $11.84. These special tickets will not be on sale at any of the offices and can only be obtained from Wm. J. Stewart, 67 Bromfield street, Boston, who will also, on request, secure state room accommodations on the steamer Pilgrim for the above date.

The neighborhood is on a broad grin at the expense of two clerks in one of the large retail florist stores, who have been patrons of the Louisiana lottery and whose friends represented to them that the tickets which they held had drawn a prize. Congratulations poured in continuously over the telephone and the two

VIEW IN THE GROUNDS OF H. H. HUNNEWELL, ESQ., WELLESLEY, MASS., OVERLOOKING THE ITALIAN GARDEN AND SHOWING THE RECENT IMPROVEMENTS THERE.

victims enjoyed for an hour or two the sensation of being rich.

On Thursday evening, July 14, occurred the wedding reception of Mr. Morris F. Comley at Lexington. The young man is the son of Mr. James Comley, the genial gardener on the F. B. Hayes estate, and is his assistant on the grounds. The occasion was most enjoyable and the hospitality, as in all cases where Mr. Comley has sway, unbounded.

Visitors to Boston the past week: Walter Helms, Janesville, Wis.; W. H. Moon, Morrisville, Pa.; Thos. Meehan, Philadelphia; W. C. Barry, Rochester, N. Y.

In response to a call about 25 cut flower growers met at the Quincy House to form an association or cut flower exchange.

Temporary organization was effected as follows: President, W. C. Stickel; Vice-President, Geo. Cartwright; Secretary and Treasurer, W. W. Tailby.

The president and secretary together with Messrs. Knapp, Zirngiebel, H. Cartwright, Robertson and Kidder were chosen directors and instructed to prepare and bring in a draft of constitution and by-laws at the next meeting. A paper was opened for signatures of those willing to take stock in the proposed corporation and was signed by nearly every individual present.

New York.

Mountain rhododendrons are to be seen about the city.

Flowers are generally pretty good, in spite of hot weather. American Beauties are an exception, however, most of them being very poor. Sweet peas are still extremely plentiful, and are likely to continue in quantity as the successive crops come in. Pink is the favorite color, Blanche Ferry being considered the best, while Princess Beatrice comes next in favor. McMillan, of Pearl River, N. Y., is sending in particularly fine sweet peas, this flower being a summer specialty with him.

Among funeral orders recently filled by Alex McConnell was one calling for a floral casket. The foundation of smilax was lightly covered with La France roses, fringed with adiantum and Niphetos roses. Among other designs in the same order were several large wreaths, one being entirely white and lavender sweet peas and adiantum tied with a white sash. Another was of white sweet peas and Bride roses. Sweet peas being so graceful in themselves are applicable to all sorts of decoration.

Some pretty little glass bowls painted in floral designs were noted at McConnell's; they make appropriate gifts when filled with natural flowers harmonizing with the painted decoration.

A few of the pink Cape Cod lilies are to be seen occasionally.

Siebrecht & Wadley display some fine Cattleya gigas, which they are now blooming in quantity.

Among the ornamental baskets displayed by Scallen are some large canoes, very nearly the size of the real article; they are white and gold with crossed paddles. Another basket, novel and showy, is in the shape of a swan.

The Spaulding trophy to be bowled for at Washington is now to be seen at Whiting's, the well known silversmith's. It bears a spirited design, extremely well executed. Its future destination will be a matter of great interest to the competing clubs.

Asters are now coming in, but in small quantities. They are very good. Gladiolus and Lilium auratum are plentiful. Steamer work still continues, quite a few New York orders being received from the west.

Chas. Henderson is making his home in Hackensack until the completion of his new residence at East Hackensack.

Mr. Joseph Rolker has gone to the Sandwich Islands. Wonder whether he can talk the language of that country?

Business is about at its lowest notch now, stores and commission houses both being deserted.

Buffalo.

Your correspondent feels too much broken up, or rather broken down, to write many notes this week. But he has an item all the same. On Friday afternoon a dark cloud appeared in the western sky and it was larger than a man's hand when first discovered. By 6 o'clock an electric storm was on us and about us with great fury. The wind was terrific and the hailstones which fell for nearly 10 minutes were beauties of their kind. Nine out of ten people who witnessed the storm say the hailstones were the size of the proverbial hens' eggs. But eggs, like the hens, differ in size. I would say an English walnut was a fair average size of those I saw. But there were several picked up that measured 2½ and 3 inches

long. The hail storm was quite local and being worst in the Cold Spring region, or a little north of it, and here is where most of the greenhouse establishments do congregate. Mrs. D. Newlands and Wm. Legg lost about half their glass. Wm. Scott nearly one third (or about 8,000 feet). Other sufferers are C. F. Christenson, James B. Milley, J. H. Rebstock, William Belsey, James Buxton and Theodore Frank. Others have lost a little but not of any consequence. I am afraid there was but one of the above who was insured. Now there may be a scramble for insurance. Others will say, "Oh, this won't occur again in 20 years." To those I would say, please remember this is twice in two years we have had such a visit. The writer remembers to his sorrow the bad "knock out" we got June 12, 1890, although it was not so severe as this one. Further particulars in my next.

G. S.

Toronto.

Possibly some of your readers who attended the convention here last year paid a visit to the Central prison (I don't mean to insinuate that the visit was involuntary), the extensive grounds of which are under the care of Mr. Wm. Houston. The flower beds are simply gorgeous just now and promise to be better still. Mr. H. goes in for bedding in all styles—carpet, subtropical, ribbon and mixed borders. A bed of tuberous begonias in the full sun was planted this year as an experiment, and it bids fair to be successful; the plants have not scorched so far.

The large lily pond, though, is the greatest attraction in the gardens. It is heated by the exhaust steam from the engines that run the machinery inside the prison walls. The lilies are now beginning to flower freely. Nymphæa marliacea chromatella and candidissima were just "too lovely for anything." N. Devoniensis, Zanzibarensis, dentata, rubra, flava, scutifolia, etc. were all doing well and beginning to bloom well. A Victoria regia in the middle of the pond seemed to be growing well, but it is doubtful whether it will "get there" before the cool weather comes on in the fall. It will be something to talk about if it can be grown successfully in the open air in Canada.

In the greenhouses there is so much of interest that one scarcely knows where to begin. The big palms and the little palms all look so luxuriant. There is an old thrinax which the writer has known for over 20 years; it has been through more vicissitudes than any tramp in the country. It is now trying to lift the roof off the house, and with the assistance of an Areca rubra it seemed as if it might succeed. There were also two Phœnix dactylifera, regular old stagers, and a Latania borbonica reaching all across the house. Smaller palms of all the popular sorts filled up the spaces. There was also an immense Pandanus utilis in this house and a large well grown Alsophila australis, hard to beat for its age.

In another house of stove plants were fine specimens of Alocasia Thibauti, A. metallica (very fine), fancy caladiums, Dracæna A. Laing, Pteris Smitbiana, P. Wallichiana, Davallia hirta cristata, D. Mooreana, Adiantum Williamsii, A. formosum and many others. There is also a large collection of orchids here, but of course at this time not many were in bloom; all, however, looked the picture of health.

Mr. Houston is going heavy into chrysanthemums this year and is growing specimens of most of the new sorts. He has also many good plants from seed, and three or four benches planted the whole length of the house. Another house is almost entirely devoted to tuberous begonias. There are some plants and sorts that could not be beaten anywhere. Well, when one gets among a collection of plants like this it is hard to leave off talking about it, but as I have some modesty left yet I will not trespass further on your space this time.

Next week the annual summer show will be on, of which I will endeavor to send you a full account.

E.

Baltimore.

The club meeting was well attended and ten new names were added to the roll, nine of them being passive or associate members.

A motion to alter the name of the club from "The Gardeners' Club of Baltimore" to "The Florists' Club of Baltimore" brought out a flood of eloquence for and against. Mr. W. B. Sands was easily orator of the day and quoted the Bible, Shakespeare, Tennyson and numerous other authors to show that "gardener" was the older and nobler title. President Fraser followed with an effort only inferior to Sands on the same side. Needless to say the motion was lost.

Another motion that provoked debate was the proposition to have the two items of mantel and table decoration in the fall show united in one dining room decoration with large premiums. The majority of the club thought the decoration would be too large for general competition and that was dropped.

Then the date of the exhibition was the subject of prolonged debate, the committee recommending holding it on Wednesday, Thursday, Friday and Saturday, Nov. 9, 10, 11 and 12, with a sacred concert for some charitable institution on Sunday, the 13th. Some of the members said: "Hold it on Tuesday in spite of the presidential election." Most of them were opposed to the Sunday concert, so it was decided at last to hold it the week after, viz., from November 15 to 18 inclusive.

The first question in the question box was: "What is the best soil for fancy caladiums?" Answered by Mr. Seidewitz: "Peat, loam and well rotted manure."

"Best tomato for greenhouse forcing?" Lorillard, Dwarf Champion and Acme were named.

"Can anything be done to prevent alternate gluts and scarcity of flowers?" Mr. Ekas supposed the mutual consent of all the florists in the United States to grow certain quantities of certain things would be necessary. Mr. Moss thought the greatest gluts of roses occurred in the fall during chrysanthemum time and strongly advised pinching off all buds until after that time. Mr. McRoberts suggested that the consent of the florists in the city would regulate the trade here and be a starting point for getting all the florists in the United States. A list of the stuff to be grown by members would be of very great advantage. Mr. Seidewitz did not approve of the list, as he thought many would grow what they found shrewd growers were going into and consequently make things worse. Thought a wider market and growing specialties the best remedy.

Mr. Cook was invited to give his method of firing with coal screenings, but referred the club to Mr. H. C. Vogel, from whom he had learned the plan, and the secretary was requested to ask Mr. Vogel to give the club an account of the matter at the next meeting. The club then adjourned.

Business in town remains much the same, i. e., dormant, if not dead.

MACK.

Chicago.

At the last meeting of the Florist Club the report of the committee on transportation to Washington was accepted. As previously announced, the trip will be made over the Pennsylvania R. R. The train selected will leave Chicago at 3 p. m., Sunday, August 14. Will reach Pittsburg at 8 o'clock Monday morning, giving a daylight ride over the Allegheny Mountains and arriving at Washington at 5 o'clock Monday evening. A sleeping car with a buffet has been reserved for the party. The Milwaukee party will travel by same train in a separate car which will reach Chicago in time to be coupled on to the train bearing the Chicagoans. Several florists from other points in the west and northwest have signified their intention of meeting here and taking advantage of the low rate secured from here, and others will be picked up on the way. We shall probably meet the delegates from Cincinnati and Indianapolis at Pittsburg.

An interesting feature of the club meeting was some observations upon the pronunciation of latin names by Mr. F. F. Benthey. Mr. James Davis was elected to membership in the club.

At the quarterly meeting of the Horticultural Society of Chicago, held last Saturday afternoon, there was a lengthy discussion upon the best means of making the coming exhibition an overwhelming success. The question of continuing the show for two weeks, changing the features several times, was talked over and will be further discussed at the next meeting of the Executive Committee. An addition made to the premium list, and that promises to bring out lively competition, is a special prize of $200 for the best general display of cut roses, competition to be open to everybody. There will be no restrictions whatever. All the judges will consider will be the variety, quality and quantity of the flowers shown, regardless of where they were obtained or who grew them.

On the president's table were a vase of beautiful blooms of Iris Kæmpferi, of very large size, from Mr. W. C. Egan, and a vase of very handsome double poppies from Dr. Kennicott, which excited much admiration from those present.

Business is so nearly dead that it is not worth mentioning. Plenty of flowers, such as they are, but precious little really good stock.

The bowling contingent of the Florist Club will play another series of practise games next Friday evening (July 22) at the Superior Alleys, corner of North Clark and Superior streets, beginning at 8 o'clock. Some of the boys are developing upward and some downward.

Among recent visitors to the city were Mr. J. H. Brazendale, representing Thos. S. Ware, London, and Mr. E. G. Hill, Richmond, Ind.

WE HAVE received from Mr. T. J. Oberlin, Sinking Springs, Pa., a flower of Richardia alba maculata with two spathes.

Philadelphia Notes.

Robert Craig is a strong believer in the chrysanthemum. A number of houses are already planted with choice varieties and an assortment of the newer kinds is set aside, waiting on a large carnation house which will not stop blooming. They are all planted out on benches for cutting next fall. In conversation with the writer he said:

"For the best early yellow I will plant Mr. J. J. Whilldin, which I consider better than Gloriosum. I think that Mrs. Whilldin will prove to be much the better seller of the two. Will grow a table of Le Neige; it always does well with us; it is the best early white yet. Emperor of Japan I consider is a good one; it is a small incurved white of perfect form, nice enough for a bride to carry.

"We have planted very largely of Jessica for early, and will have a lot of Ivory to cut from later.

"This whole table is Mrs. Maria Simpson, for specimen plants of which a $100 cup is offered at the next chrysanthemum show of the Penna. Hort. Society. I think it is a fine variety.

"There is a lot of Frank Thomson (not Mrs. F.), but like it only pure white. These two tables are all Ivory. You see they have all their foliage. We try to prevent their ever getting checked. If once the wood gets hard they don't do so well. We are getting to understand them better every season.

"There's Minnie Wanamaker—put that down—and John Goode; Mr. Asmus has a whole house of it. It is a lavender with center of lemon yellow; No. 1 in every respect.

"All that lot is Lincoln. We tie to Lincoln. No use talking, it is one of the best. And of Widener, we grow a lot as well.

"Mrs. R. Craig is an incurved white, of which we think a great deal, and there's Mrs. Geo. Bullock, a fine variety. This lot (a lot of rooted cuttings in boxes) we expect to flower; they are in fine shape and will keep right on.

"There is a choice selection in this house, Ada Spaulding, Lilian Russell, Mermaid (which won a cup in New York) and Mrs. J. N. Girard, which came very near it; all fine varieties.

"For very late we have Mrs. L. C. Madeira, or Golden Ball. This is one of the sensations of last season and has a place all by itself.

"I think there will be more chrysanthemums sold this year than ever. My stock of plants is about exhausted; I did not have enough of some varieties."

W. K. Harris, who has raised and sent out so many fine chrysanthemums, has a very large stock and they look well. He is as enthusiastic as ever and has a fine batch of seedlings, crossed with great care. The seed has been kept separate, so that it will be possible to tell the parent plant on one side at least.

For his early yellows he says: "I have a house of Eldorado which I think is a grand variety. In my opinion all the other early yellows will have to take a back seat while this one is about.

"Glory of France I have for early pink. I like Minnie Wanamaker and have a good batch of it, also lots of Lincoln, but very few Widener. Why? Well, because everybody else is into it, and then I believe it is running out; it is not as good as it used to be. Some varieties go that way, fine for a year or two and then they have to be thrown away.

"I grow a great many Ivory. I find it to be the best all round white. I believe it to be the best white ever raised. For a pot plant it is a gem.

"I give my attention mostly to late varieties. For late white I like Mont Blanc. It is not a perfect flower, but bold and striking and sells well. Yellow Mont Blanc, a sport of the white, is a great favorite. I have never sent it out and don't think I shall.

"I am strong on yellows. After Eldorado and Lincoln I have Eva Hoyt, which is one of the finest I ever raised, and for the latest of all Mrs. H. A. Pennock, a very fine variety. It is a yellow 'Violet Rose' with a very strong stem. I like Mrs. W. K. Harris for a medium yellow.

"I give my late varieties quite a little heat; they seem to need it to open their flowers properly.

"It seems to me that over in Japan they raise most of their chrysanthemums from seed. In the first lot imported by H. Waterer the plants were done up in bundles of six or more, each plant in one bundle having the same number. This led us to suppose that there were six of a kind, but they turned out to be all different or nearly so and a great many were worthless.

"I have raised a great many seedlings, in some of which I have been much disappointed and in others greatly surprised. We used to condemn a plant the first year if it did not show up well; now if it is at all promising we keep it over and give it another show.

"I did not think much of Ivory the first year and sold it for a song, but the next season found it was a prize.

"Violet Rose was another; I think I sold the stock for $15. It did not develop until the second year.

"L. Canning, Mary J. Thomas, Elkshorn, Mrs. Irving Clarke, Miss Mary Wheeler, Dr. Stricker, Mrs. A. Blanc and a number of other good ones were among a lot of thirty I sold for $300.

"John Goode and I. D. Sailer brought $100 each. The highest price I have obtained for a seedling so far is $250 (for Eva Hoyt). Mrs. Wm. Bowen, a very good one, I could not get a bid on the first season, but when it developed the next year I could hardly propagate enough for the demand.

"I believe chrysanthemums will grow in popularity for a long time to come."

K.

Notes and Comments.

A little idea recently noted, where a lot of troublesome pipes for greenhouse heating were being put in order, was the use of Portland cement for joints. It could be put in places where it was next to impossible to caulk securely with oakum and red lead, making a very sound and water-tight joint. The cement was found very useful in overhauling old runs of pipes.

Among roses coming into the market in the summer Bride and La France may be named as first favorites. Beauty holds its own when good, but poor Beauties are never of any account, either in price or selling qualities. This month selected Brides and La France have been the leaders whenever good roses were called for. Most of the roses coming into the New York market at this season are from young stuff, early planting being the rule now with most growers. Planting is usually begun by the 15th of June, comparatively few plants being retained from season to season. Small teas seem very much out of date; though few flowers excel the fragrance and delicacy of old Safrano and Bon Silene one rarely sees them now. Apparently Goutier is not being very largely planted either. Growers find that the same space when planted with the larger hybrid teas brings far better returns, so there is little inducement to plant the smaller sorts, in spite of their excellent qualities. English journals often speak of Ma Capucine for boutonniere use, but in spite of its charming color it has never held any vogue here, chiefly because it is too small. There is a marked difference of opinion regarding market flowers between this country and Europe, many things salable there being little called for here, and vice versa.

A batch of fine eucharis recently noted were planted out in a corner bench where they could remain undisturbed. This plant is always the greatest success when planted out instead of remaining in pots. In such a situation it is of the greatest use in a commercial place, where it may be cut as needed. It will do well in any odd corner of the palm house. A knot of eucharis and adiantum on an ivy wreath is a simple funeral design much admired for an aged person.

A good idea seen in country house weddings or entertainments is to turn the large piazzas into promenade conservatories. They are closed in with awnings and then arranged with palms and decorative plants. Cut flowers are not admissible in such places, the aim of the decorator being to give the impression of a conservatory entirely.

A few good gardenias are to be seen in the market now, but unfortunately they come at the very deadest time of the year, so there is little to be gained by them. If they were in flower when all New York is in town they would doubtless find ready sale for boutonnieres among the young men desirous of emulating the "Gardenia Brigade" in London. This flower is just right for the London florist, blooming at the fashionable season.

Outdoor Lilium candidum seems quite plentiful and is a useful thing. Being so thoroughly hardy and liking an undisturbed situation it will be found very handy for the retailer with a local trade, as the blooms will be ready for use after forced lilies are over. Naturally they do not realize much in the city market, coming in at the dull season.

Some very noticeable new strains in zinnias give a showy effect in bedding and are found useful by the trade. We see some at times making a very fine show in large boxes and vases.

Speaking of vases, it is amazing to see the change in some of the city bedding during the past month. Since people have gone out of town the plants are neglected, and their appearance tells the fact. Again, in some cases the stuff has grown quite fast at first and is now showing the effect of over crowding, the stronger plants smothering the weaker ones. Geraniums, ageratums and lantanas look best among the flowering plants, keeping their freshness and blooming abundantly. Among foliage plants,

crotons, aucubas, phormium and the various palms keep in perfect order. Begonias are in good order generally, and so is heliotrope. Boxes filled with marguerites, which were charming early in the season, are now hopelessly shabby in appearance. The vines generally used seem to do well unless greatly neglected. The vinca seems a success even on the really dusty thoroughfares. Some of the coarser ferns were used in mixed vases, but they do not last at all, and their use is not advisable in these exposed situations. Some nice little rhapis look well in vases and bear exposed situations well. Most of the city bedding is planted for immediate effect, and through lack of care it looks quite used up by midsummer.

EMILY LOUISE TAPLIN.

THE THEORY OF DESIGN IN DECORATION

BY F. SCHUYLER MATHEWS.

IV.

Asparagus Plumosus and Smilax.

Two very graceful and delicate vines which adapt themselves to the purposes of room decoration with most charming results, are the Asparagus plumosus and the smilax.

The two vines are entirely different in structure and appearance, and on this account they should receive very different treatment from the decorator's hands. The fern-like leaf branches of the asparagus are not adapted to *all* uses, and the delicacy of the smilax, stem and leaf, is something which is very often ignored, when the opportunity comes to display it advantageously.

Now, I believe that it is a matter of custom to "throw in" a spray of smilax with the box of flowers which the young lady has ordered, and this very fact to my mind, points decidedly to the habitual inconsistency of the florist who counts a flower, a flower, and a bit of green, green, without taking into account the inseparable and absolute relation of the flower to its *own foliage*. The bit of smilax "thrown in" is all right in its proper sphere, but it can never take the place of the foliage of the Jacque rose, or that of the Wilder pink. This principle of consistency, therfore, is what I wish at the start to emphasize most thoroughly. The consistent use of asparagus, smilax, laurel or any other greens, for decorative purposes, must result in harmony and good taste, whereas the use of such material *ad libitum* must end in a tasteless display of flowers and greens, with about the same mechanical arrangement as that familiar to us on the sample card of colors which the house painter gives us to make a choice from.

All mechanical arrangements, artistically speaking, are abominations. A mass of flowers packed together with an even width smilax border, is unmentionably bad. A group of asparagus arranged with regularity, and the vine-character completely hidden, is equally bad; even a piece hung from a high point and trailing downward in a curve, with the stem hidden, is not a proper method of displaying the graceful lines of this beautiful vine; all this for excellent reasons. Nature does not do anything mechanically; she does not hide the structure or character of her plants, and she does not produce any effects which are unnatural.

Fig. A.

Aside from any decorative work which is free and spontaneous, and therefore nearest nature's methods, there is the other principle which imposes decided restrictions on all decoration, i. e., conventionality. Both are correct, and both are beautiful, but both adhere absolutely to nature's truth. That conventionality which does not bear on its face the unmistakable stamp of naturalness, breaks the principle of truth and good taste, and therefore is not beautiful.

In figure A and B, we may observe what is conventional and yet perfectly natural. The festoon, I have previously drawn attention to, as a legitimate means of decorating a room, with what is pleasantly repeated. Without the ribbon of a lighter or much darker color, I question whether the festoon is quite natural; because, as I have stated in one of our first articles on decoration, the structure, or arrangement, of all ornamental detail, must be plainly visible. Nothing

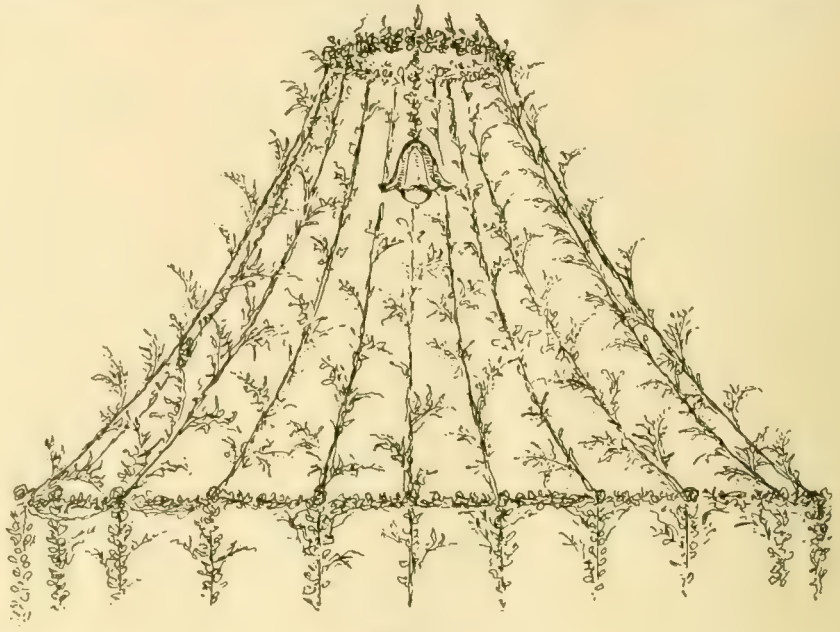

Fig. B.

is better adapted to festoon work than the smilax. It is dainty and graceful, light and airy; and in a room where the Colonial principle in design is present, it is exactly in place. I do not think I can emphasize too strongly, the graceful beauty of the festoon when it is worked out in the way I have pointed to in a previous article; everything said there in reference to the conventional festoon will be applicable to the use of smilax in such work. Let me repeat again, we must beware of crossing our curved lines, and interfering with the structural lines of architecture.

Figure B, is in every particular conventional, yet it is perfectly natural; the lines of asparagus stems are gracefully displayed, and the structural quality of the whole design may be seen at a glance. It may possibly look old-fashioned to some, but that is neither here or there when we are discussing good taste and beauty in

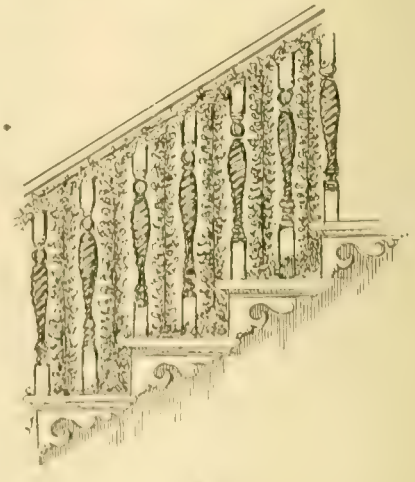

Fig. C.

design. There is no such term as "old-fashioned" in the school of art!

"A thing of beauty is a joy forever;
Its loveliness increases."

Everything Colonial is old-fashioned, everything Colonial is rapidly being revived, and most everything belonging to

Fig. D.

Colonial times in architecture, is lovely.

The canopy shape of Fig. B is peculiarly adapted to certain uses which it is unnecessary to specify. Indoors or out, it is very beautiful if carefully constructed. The lower part of the affair is simply an adjustment of wooden sticks about as large around as one's finger. The whole can be fastened together by screw-rings and rings, and folded together like a Japanese screen. The arrangement of pots

Fig. E.

of lilies (all around the lower half-circle), standing between each smilax twined stake, is easy of accomplishment, and many things will suggest themselves to an artistic mind for the adornment of such a design. Electric lights suspended from the circle overhead and perhaps distributed among the climbing foliage here and there at the sides, will greatly enhance the beauty of the affair at night.

Fig. C is *one* way (there are many others equally good), of decorating a stair case, and showing the structure without any interference by the added greens; a continuous line of smilax, held in place by a continuous line of fine wire, will do the work in the simplest and best way. The hand rail should be *bare;* there is no reason why it should not retain its character of usefulness. If the banisters are pretty there is no good reason why they should be hidden completely with the greens.

If the newel post is like our sketch in Fig. D, there will be a fine chance to use asparagus tastefully in its adornment. Ferns, there are in plenty at this time of year, and nothing seems to me so beautiful as their conventional leaf when displayed to advantage in decoration. The fern must always look well with the asparagus, because one belongs in mid-air, and the other never any where else except at one's feet.

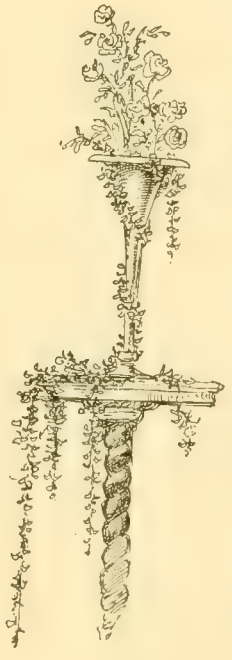

Fig. F.

We have already learned that there is nothing to be gained artistically in the use of any greens, representative of portieres, etc. Yet, if one wishes to screen off a certain portion of a hall-way, or to hide partially, the musicians, behind a graceful curtain of green, what is at once more beautiful and natural than the asparagus trained in the way Fig. E suggests.

If we are to follow nature's methods, we must twine her vines, and train her bushes in the way *she suggests*, and not start out with the preconceived notion of *what is going to look best* according to our narrow and somewhat egotistical point of view. I believe that fully one-half of the wretched and unjust criticisms, we, who are artists, have to suffer from, is developed from preconceived notions of the beautiful existing in the minds of our critics. Precisely the same evil brings about the ugly and unnatural results, when the artist or decorator makes up his mind about a thing, without regard to nature's suggestion and truth.

A little vase of roses, like that sketched in Fig. F, shows how a bit of smilax can be used around it in a perfectly natural way. There are fifty ways to use the smilax here *un*naturally, but nature would suggest perhaps only one.

Too much arrangement in flower decoration is worse than none at all; if one would stop about half way, when decorating a room, without doubt there would be more chance of artistic results. Neither smilax nor asparagus need deep study in the methods for treating them artistically. It is a fact, that if we should observe closely their habits in greenhouses or out of doors, we would learn the most important things about their use in decorative work. In any event we must not forget that their greatest charm lies in their gracefulness; and if we hide this, we will fail utterly in their use artistically.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

Trees and Shrubs in Bloom July 15.

CATALPA BIGNONIOIDES was at its best a week ago, but now half of its flowers have fallen. What a beautiful tree this is when in bloom, and what a mess making tree it is 365 days a year! Even its last year's seed pods have not yet all dropped off. Teas' hybrid catalpas are in fair bloom yet and have been for ten days. The Japanese C. Kæmpferi is about done blooming.

KŒLREUTERIA PANICULATA, a small broad headed tree from northern China, is still in fine bloom; indeed it is now the most showy tree in flower in our grounds. It has very large panicles of small yellow flowers. Some of the trees were in good bloom a fortnight ago and others are barely in bloom yet.

AZALEA VISCOSA, the charming white azalea so common in the eastern swamps, is now in the pink of perfection, and although a denizen of wet swamps, it thrives admirably in ordinary garden ground. It also keeps in bloom longer than the Ghent azaleas of six weeks ago. A. arborescens of the Alleghenies is on the wane.

STUARTIA PENTAGYNA is in magnificent bloom. Those of you who have never seen a big bush of this American shrub in full bloom could scarcely credit that we have got such a showy plant in flower in the middle of July. Its flowers are white, flat open, single, over three inches across, and hundreds of them are open at one time.

CORNUS SIBIRICA blossomed full some time ago and now again it has a good second crop of white cymes.

WISTARIA CHINENSIS always makes an attempt to bloom twice a year, but this, its second crop, is a feeble effort. The Japanese or American species do not.

CYTISUS CAPITATUS shows a good many old brown flowers; at the same time it has a good showing of clear yellow ones.

POTENTILLA FRUTICOSA keeps in bloom.

IF RUBUS ODORATUS weren't such a weed it would be more desirable, for it flowers well and for several weeks and doesn't object to a shady place to grow in.

JASMINUM OFFICINALE has lots of sweet white flowers, and the

COLUTEAS are laden with bladdery pods and a good sprinkling of yellow and tawny blossoms.

MAGNOLIA GRANDIFLORA is giving us a few flowers still, and what lovely blossoms they are too!

CLEMATISES JACKMANI, crispa and coccinea are fine and make quite a show. They do well when cut to the ground every year like a common herbaceous perennial; indeed, this is the proper way to treat coccinea.

ABELIA RUPESTRIS is in good bloom. From Baltimore southward it is perfectly hardy, but here it is not. I lift the plants over winter and heel them into a cold pit.

INDIGOFERA DOSUA is prettier and fuller now than when I reported it a fortnight ago.

SYMPHORICARPUS.—Various kinds are in full bloom, and some, as mollis and occidentalis, make a little show in this way; it is for their colored fruit in fall, however, that all are planted.

AMONG HARDY HEATHS we have now in bloom Erica Tetralix, noted a fortnight ago, E. vagans, or Cornish heath, and its varieties. The common heather, Calluna vulgaris, the thriftiest of all, isn't quite in bloom yet. These are charming little plants where they do well, but they need a good place and a little extra attention. An enthusiastic amateur who was here the other day told me he planted 300 heaths last fall and everyone is dead. Now, don't condemn the heathers on that account.

CEPHALANTHUS OCCIDENTALIS, the button bush of our swamps, has spherical heads of small white flowers now in bloom. Although the flowers are not strikingly beautiful, they are attractive, especially so late in the season as this is, and the bush has fine bold foliage. The plant thrives well even when the sea water reaches up to it now and again, and although it often inhabits partly submerged swamps, it thrives well with us in the garden.

ÆSCULUS PARVIFOLIA, the dwarf horse chestnut, has come into bloom. It is indigenous to the foot hills of the southern Alleghanies, but perfectly hardy in the north, and strange it is, while it is a very rare plant in a wild state, it is quite common in cultivation. From the end of every shoot arises a long spike of white flowers with long exserted stamens and anthers.

CALLICARPA PURPUREA is a small shrub with small axillary cymes of purple flowers now in bloom. When in flower it has no special beauty; its great attraction is in its showy purple berries in late fall. This is the shrub that Friend Temple of Iowa grows as a pot plant to mix with his chrysanthemums in the greenhouse in November, when he sells it for $5 a piece, it is so beautiful when in ripe fruit.

THE OAK-LEAVED HYDRANGEA is in splendid bloom. Thunbergii is fine yet and the early flowered form of H. paniculata is at its best. Otsaka grown in pots or tubs and wintered in the cellar and not forced, but placed outdoors in summer, is very fine now, but its flowers like shade from warm sunshine.

SHRUBBY HYPERICUMS, or St. John's Wort, are now coming into nice bloom and they are very pretty for the first fortnight of their blossoming period, but after that their brownish decaying flowers and brown seed vessels give the bushes an unkempt appearance. The plants vary in size from 18 inches to 4 feet high and are broad and bushy; all have yellow blossoms and are exceedingly copious. H. prolificum, H. Kalmianum, H. fasciculatum and H. aureum are the species we now have in good bloom. The first two are common in cultivation, the third we had from N. Carolina, and although it has not been generally tested, we find it perfectly hardy here and exceedingly free blooming. H. aureum is the largest flowered of the four and quite handsome for a while, but when the dying flowers and ripening seed vessels begin to thicken upon it they give it a very seedy appearance. During the past ten years this species has had a vast amount of praise showered upon it, but in my opinion it is a very much overestimated plant. Several other species, as patulum and calycinum, are only herbaceous.

LESPEDEZA BICOLOR is in good bloom. It is a hard wooded shrubby plant 6 to 9 feet high, with wiry branches, small trifoliolate leaves and ample airy compound racemes of red-purple pea flowers. The habit is more upright than bushy. A valuable shrub on account of its late blooming tendency, profusion and lasting in bloom so long. It ripens seed in great quantity. A native of northern China and Japan. In the Dictionary of Gardening you will find the above name used as a syn. of Desmodium penduliflorum, but Nicholson was wrong. The two plants are very unlike one another in nature, habit, time of flowering and general appearance. The proper name of the plant we call Desmodium penduliflorum is Lespedeza Sieboldi.

MAACKIA AMURENSIS was in its best bloom a few days ago. It used to be called Maackia, then Cladrastis, and now I believe it is referred back again to Maackia. It is a little tree 10 to 20 feet high and just now every branchlet is terminated with a long, dense, upright raceme of purplish white flowers. The plant is a surface rooter and should be grown in good, moist land, else the pinnate leaves which are never too luxuriant will become pretty scrimp. Not a showy plant, simply valuable for its late blooming nature.

ROSA FOLIOLOSA is a real pretty, single, white flowered spreading pigmy from Texas and other southwestern parts, but perfectly hardy here. It never makes an old stemmed bush, in fact the stems are biennial, the plant spreads into a broad mat and seldom grows over 18 inches high. It has pale green leaves and rather smooth stems and its flowers are produced singly at the end of each stem; they do not appear with us till the end of June, but for a month or more the plants assume an everbearing nature. A splendid plant for rockwork.

ROSA WICHURAIANA is a little Japanese rose that has made quite a stir among planters during the last two years. It is a running rose, that is, its nature is to spread out flat upon the ground and not climb up into the branches of trees or over bushes like a prairie rose, and landscape gardeners are using it in quantity to spread over rocky and bare surfaces as a change from ampelopsis, bear berry clematis and the like. Its leaves are small, very plentiful, deep green and quite glossy, and just now the carpet of rose bush it forms is studded all over with sweetly pretty, little, single white roses which will last well through July. It is exceedingly vigorous and likes good ground and an open situation and always hugs the ground flat, it doesn't squirm about like a dewberry.

THE PRAIRIE ROSE (Rosa setigera), single, was in perfection a week ago. Even that veteran Trumpey when he saw it here a few days ago declared it was the finest hardy rose he had ever seen. And it is simply the old, wild, Michigan rose.

BUDDLEIA JAPONICA and B. Lindleyana from China are in full bloom. They are rank shrubs with a soft pithy growth, and every branch is terminated by a long drooping or arching raceme of lilac-purple flowers. They are not handsome, but admissible on account of their lateness and free blooming tendency. What is now called Japonica used to be named recurviflora, which is a different plant, a native of the Loo Choo Islands, and not hardy here. Although we grow B. globosa, which is common in cultivation in Europe, it is not hardy here.

SPIRÆA DISCOLOR VAR. ARIÆFOLIA, sometimes called Holodiscus discolor, is a native of the Pacific slope from California to Washington. It is an elegant shrub with white, fleecy flowers in terminal much branched panicles. It was in its finest condition a week ago and is on the wane now. It is not very hardy here and every year it gets injured a little by the winter; it is not the intensity of the cold, however, that seems to ail it altogether, for it lived at Cambridge, near Boston, with me just as well as it does here. It would appear that the same perversity we experience in growing the conifers of the far west is also peculiar to this graceful spiræa.

SILVERY LEAVED LINDENS.—What is generally known as the silvery leaved linden is Tilia argentea, and the weeping or drooping branched silvery leaved linden, often regarded as a variety of argentea, is a distinct species and called Tilia petiolaris. Both are European trees and both were in finest bloom a week ago, and even now their waning blossoms scent the atmosphere with delightful fragrance. Splendid trees both of them and they do well here. WM. FALCONER.

Long Island.

Time of Opening the Convention.

In the interests of the delegates to Washington generally would it not be much better to have the first session on Tuesday afternoon instead of in the morning? At every convention so far a large number of members did not arrive in time for the first session. But have the opening in the afternoon and it gives time to get to your hotel and get settled a bit and a chance to hear the president's address and the other speeches. What is the opinion of other members on this? Now is the time to speak. J. B.

[Now that the program has been printed and issued any change for the coming meeting would be unwise, but no harm will be done by considering the matter now that a change may be made in the time for opening subsequent meetings in case it is deemed desirable by a majority of the members.—ED.]

UTICA, N. Y.—At the business meeting of the Utica Florists' Club, held prior to the banquet previously reported, six new members were admitted to the club. We are still progressing and gaining in strength.

PLEASE REMEMBER that the FLORIST is for the trade only and do not recommend it to any one not actually in the trade. We have of late been surprised to receive subscriptions from amateurs with the statement that florists in their city had recommended the paper to them and given them our address. Please do not do this, as we are put to the trouble of returning such subscriptions to the sender and the majority take the refusal to send them the paper in anything but a pleasant spirit. Remember that it may work to your injury as well as that of others to have the wholesale prices quoted in our columns go outside of the trade. We want every one in the trade, including employes, on our subscription list, but none that are not actually in the trade.

IF YOU have any really good thing to sell to florists, don't fail to show it at the trade exhibition at Washington in connection with the annual convention of the Society of American Florists. All the live men in the trade will be there, and they are the men who are quick to discern merit in anything that really possesses it.

THE Florists' Club of Washington has issued the premium list for its second chrysanthemum show, Nov. 15 to 17. Copies may be had on application to the secretary, Mr. G. W. Oliver, 1844 8th street, N. W., Washington, D. C.

THE Gardeners' Club of Baltimore has issued a schedule of premiums to be awarded at the exhibition to be held next November. Apply to the secretary, Mr. J. J. Perry, 221 N. Liberty street, Baltimore, Md., for copies.

LAST CALL for photographs for our convention album. If you wish to be represented send in your photo at once. We must have all in hand by August 1 at latest.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

The Forcing Bulb Industry.

How will the crops turn out? is the weighty question which every bulb dealer puts to himself and everybody of whom he expects to get some reliable information, and he racks his brain with this puzzle, as if any thinking could help improve the quality which he is to bring to his trade. Ever occupied with the season which (to make a success) he longs to see bring forth the best for him to offer, it is a rude surprise to find that even if successful otherwise there is a dormant influence which poisons the fruit of his labors. "Greediness" is the name of this baccillus which has caused already much harm, and will cause more unless something is done to counteract it. To illustrate the case, it was in 1878, or only 14 years ago, that the Dutch catalogues quoted Yellow Prince tulips at fl. 1.25 per 100; America found the forcing value of this variety and kept on increasing orders on this kind, which now, owing to the existing demand, commands as high as $18.90 per 1000, or at 40 cents to the guilder, fl. 4 56 per 100. Does it cost parties any more to grow this variety in 1892 than in 1878? Not at all. And yet the prices are 400% higher now than what they were 14 years ago. Why? Because the foreigner took advantage of the dealers' labors and kept on increasing prices from year to year, until nowadays few growers see a profit in forcing tulips for market at the existing cost of the bulbs. The "goose that laid the golden egg" is being slaughtered. Again, Von Sion narcissus or double English daffodils were sold in 1878 by the bushel and nobody thought of counting them. This season the writer has noted its highest quotation in London market as 65 shg. sterling per 1000.

This is what we have come to. After the dealers did not respond with sufficient orders on account of enhanced prices, the Dutchmen sent their offspring over to look up the trade direct, and many a time they gave in their greed for an order a cheaper or as cheap a figure to the consumer as they gave to the dealer for his accumulated orders.

Why did they not increase the quantity grown of such varieties as the American grower demanded? Why did they keep on growing some 50 to 100 sorts which are no good for forcing? Their greed prevented them, because their old trade at home would call for them. They advertised America all over the world as the biggest tulip buyer and raised their home trade in the American forcing kinds to the American level; but to cater to this trade and to keep it prosperous! They never thought of that! But what has it come to? America does not use one-third of the amount of tulips that it did five and six years ago. Prices are too high. Apparently the only remedy is to foster the production of American grown bulbs. The encouraging reports from Massachusetts, Michigan and Illinois in growing Dutch bulbs at home, and diverse inquiries addressed to the writer as to making trials of growing these bulbs in North Caro in , Florida and California, indicate how a home supply can be established, which in the course of time must influence the Dutch in their mad career.

Again, climatic influences will be less severely felt if the U. S. have not to rely entirely on Holland. If our American growers of tuberoses, which sell for $10 per 1000 on an average in seed stores, can give us a Yellow Prince, Cottage Maid, Salvator Rosa, Tournesol Yellow and Imperator Rubrorum tulips to sell at $15 per 1000 the consumption would soon increase greatly.

The Roman hyacinth, another leading bulb, which has suffered from the greed of the French grower, can just as well be grown in the south as in Bermuda where folks are obtaining good results with their culture and can bring crops sooner to market than Europe can send its contingent. The market is able to consume more flowers than it did.

We may safely say that 5 years ago was the down hill turning point in the amount of consumption of tulips, on account of extravagant prices asked. If left to develop itself at fair prices a natural increase of about 8% would have made itself felt, or in 5 years about 40% increase in the consumption of material. This is taken away by the fallacious policy. How silly, if we consider these facts, do dealers act, when they wage an uneven fight with each other, following the "cut," "cut," "cut," policy, whereby the foreign grower only, obtains the advantage. Again how short sighted appears the policy of the buyer who protects the foreign trade to save a few dollars, whereby the American dealer is incapacitated, whose interests are indentical with his own. Does not the dealer benefit the country at large by living here, paying taxes here, and sharing the welfare of the country by investing his savings in American enterprises, whilst the foreigner carries his gain back to his foreign home?

Perhaps if facts as above are pondered over a little common sense may devise a way to gather the many interests under one hat and proceed to combat the common enemy, so that the bulb dealer can have a breathing spell from guessing.

AUGUST ROLKER.

CALIFORNIA advices report all seed crops in very promising condition.

ILLINOIS reports on farm seeds show oats a heavy crop; corn fair but two weeks late; beans good.

Clean and round, heavy and sound,
In every bulb a flower.

GARDINER'S BULBS.

"Clean and Round, Heavy and Sound. In every bulb a flower."

That old world rhyme expresses exactly the qualities which have made

GARDINER'S BULBS

popular from one end of the country to the other. Our customers sit at the first table and pay no more than those who depend on the inexperienced caterers. Before taking your vacation make sure you have all arrangements made for Fall and Winter stock in case business may feel like taking a vacation also; but at the wrong season. Look over the special Price List we sent you and send us your order. If list mislaid send for another.

St. Louis.

The week has been cold and wet. People die here all summer, so that there is a demand for any stock that will work into funeral designs.

The St. Louis Florist Club held its regular monthly meeting July 14 in hall No. 2 of Odd Fellows' Building. Notwithstanding many of the members are out of the city, the attendance was good. A resolution that the club render the market gardeners all the assistance in its power to further their efforts to secure a suitable market was adopted.

A committee was appointed to ascertain what transportation rates could be obtained for delegates to the S. A. F. meeting at Washington, and another committee was appointed to estimate the probable cost of entertaining the members of the S. A. F. in '93, and to consider means of raising the funds necessary.

The committee on revision of the constitution made a report which was laid on the table to be taken up at the next meeting. A considerable addition was made to the guarantee fund of the chrysanthemum show. A number of letters were read offering special prizes for plants to be exhibited at the chrysanthemum show.

The roses for next season's cut are planted. Mr. Tesson heads the list with two houses 16½x300 feet. He has planted 1,000 American Beauties, 800 each of Brides and Mermets, 600 Meteors, 500 each of Brides and Perles and smaller numbers of various other varieties.

J. C. DUFFEY.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

Now is the time to prepare your advertisements for our annual convention supplement.

F. A. BALLER,

BLOOMINGTON, ILL.

Always mention the American Florist when writing to advertisers.

THE BEST STRAIN OF

PANSIES

is what everybody wants and will find in the

DIAMOND STRAIN.

Thousands of amateurs and florists whom I annually supply with this strain, say it is the best.

Its large and perfectly formed blooms, with thick and velvety petals of an endless variety of rich and delicate colors and tints, often in combinations, that if not seen would be difficult to believe ever existed in a Pansy, distinguishes this strain above all others. I particularly invite a trial order from florists who have never dealt with me, feeling confident that a trial and comparison with other strains will result in further trade, to our mutual advantage. This strain seeds very lightly and cannot be sold to compete in price with the cheap grades, which produce seeds like weeds. Those who have been in the habit of sowing only these cheap grades will find that plants from a first-class strain sell much better, even at an increased price, and a few cents per dozen extra will make up the difference in cost of seed several times over, in fact first-class varieties sell faster at 50 to 75 cents per dozen than common stuff at half price. I have made a specialty of Pansy culture for fifteen years and can speak advisedly on this point.

SAMPLES OF MANY REPORTS.

MERWIN ALLEN, Florist, Northampton, Mass., writes: "Allow me to congratulate you on your success in producing such elegant strains of Pansies. I buy seed from all the Pansy specialists, but none of them come up to yours in size, substance and richness of coloring, showing that rich velvety appearance which others fail to produce."

WILLARD BARRINGER, Florist, Dayton, O., writes: "The Pansies grown from your Diamond strain were far ahead of any other I sowed this season. I had seed from * * *, * * * and * * * for which great merit was claimed, but alongside of the Diamond would not hold a favorable comparison. I never raised larger flowers on good healthy plants, or such bright, distinct colors, shades and markings. They gave satisfaction to customers, and it was a real pleasure to offer them for sale."

PRICES OF DIAMOND STRAIN.

Over 50 distinct sorts and an endless variety mixed.

Per One-eighth Ounce	**$1.00**

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

L. B. 338. ALBERT M. HERR, LANCASTER, PA.

$1000

From 1 plant in 1 year. Millions in it yet.

IN WHAT?

JOHN WELSH YOUNG
GERMANTOWN, PA.

Montreal.

The last meeting of the club was well attended. A by-law dealing with members in arrears was passed, and in future members who fall behind two years will have their names erased from the roll. After business was finished Professor Sayred read a paper on native ferns which he illustrated by specimens he had collected around the mountain and vicinity. The members generally were surprised at the number of varieties there is to be found growing wild. A vote of thanks was tendered the professor at the close of his lecture.

Business was very lively here last week owing to a sad accident on the river by which six of Montreal's young athletes lost their lives. Nearly all the clubs in the city sent something beside what was sent by private friends. H. Mott has been in the city this week and reports fair trade. J. B.

Cleveland, O.

Harry J. and William V. Wamelink have been lately added to the already long list of florists in our city. They are building some modern houses out on Woodland Hills avenue, overlooking the city. Four of the houses are 20x100 feet and a palm house of extra height, 20x70 feet. Steam will be used. They will grow a general line of plants and cut flowers, and as they have quite a tract of land will add small fruits. In connection with their greenhouses they will in the fall open a retail store on Euclid avenue, and as they are pushing, wide awake young men no doubt they will be successful. L. F. D.

A TREATISE on greenhouse ventilation is the title of a neat pamphlet issued by Mr. J. D. Carmody, Evansville, Ind., in which he gives several pages of useful hints on this important subject. It is well worth reading.

427 and 429 Sansome Street, SAN FRANCISCO, CALIFORNIA.

NURSERIES: MENLO PARK, CALIFORNIA.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

HAIL LOCK THE DOOR BEFORE THE HORSE IS STOLEN DO IT NOW.

JOHN G. ESLER, Sec'y F. H. A., Saddle River, N. J.

Worcester, Mass.

Trade is very dull and we haven't reached the bottom rung of the ladder yet. Three hundred and ninety nine of the noble "400" have gone to the shore or the mountains and the few that are left are so busy kicking themselves because they can't go that they have little time to buy posies.

Mermets, Perles, Brides and La France are very plenty and of very fair size and color. Carnations are coming in rather small and not very many at that. We have Harrisii and candidums in abundance. A great many growers report that their sweet pea crop is a failure; the two weeks of dry scorching weather that we had just about planting time probably caused it.

A lot of very good exhibits were shown at the bi-weekly meeting of the society, held July 7. A very large display of Lilium candidum was especially noticeable. Mrs. Mary Phelps took first with a superb stand that avaraged twelve large blooms to the stalk. Mrs. C. E. Brooks had a splendid stand of Iris Kæmpferi (or lævigata according to Mr. Falconer). Although the date was rather late for iris in this locality, she showed twelve good varieties and was awarded first premium. The display of cut flowers was very large, as usual, and made a handsome show. F. A. Blake of Rochdale received first for an exceptionally good stand but was pressed very close by H. B. Watts, who received second. The call for zonal geraniums was responded to very largely; Mrs. A. A. Hixon distanced all competitors with an exhibit of forty five varieties; H. A. Jones was a good second.

These bi-weekly exhibitions are proving very popular and are doing a great deal to advance the love of plants and flowers among the middle classes. We have a very large attendance at nearly every show.

The annual chrysanthemum show will be held November 9 and 10. Mr. A. A. Hixon is secretary of the society.

SEEDLING.

A COLLECTION of interesting articles upon the subject of heating and ventilation has been printed in pamphlet form by the Herendeen Mfg. Co., Geneva., N. Y., for gratuitous distribution. It is well worth a perusal.

HELENA MONT.—Mr. J. F. Brown, formerly with the Huntsman Floral Co., Cincinnati, has engaged with Mrs. Wells of this city, and will endeavor to make a success of the growing of roses and carnations here. It is claimed by some that Montana soil will not grow roses. This summer has been the coldest known here, and the heavy rains have done much damage. There was no mail from the east for a period of six days, owing to washouts on the railroads.

MANITOU, COLO.—Considerable bedding was done by the city this year. The sum of $500 was expended for beds of plants in masonic designs in the public parks. Wm. Clark, of Colorado Springs, got the contract.

OUR CALL for photographs in the convention supplement is closed, so if yours reaches us after August 1 and is not used do not be disappointed.

OUR convention supplement will be a photograph album such as was never seen before.

Our Telephone.

"Hello Mr. Craig, is that you?"

"Yes."

"Well, this is the AMERICAN FLORIST. We saw it stated in a New York paper the other day that people in Philadelphia don't begin work until 10 or 11 a. m. Is that so?"

"'An enemy hath done this.' It is a fiction as far as this business is concerned anyhow. I expect to have a day's work done before 11 a. m., and if you wish to talk with me you will have to proceed at once for I am very busy."

"What do you note as special features of your trade this season?"

"The most noticeable thing about it is the way it is holding out. We have not had an idle moment here since before Easter and are as busy to-day as at the height of the season."

"What is the particular demand for?"

"The demand is not confined to any one specialty, but embraces palms, ferns, cannas, araucarias, ficuses, roses, chrysanthemums, everything. We find trade in a very healthy condition. The demand for palms is constantly on the increase; this is especially true as regards large specimens for immediate effect. The growers around Philadelphia are increasing their stocks of ferns, remembering the great shortage of last winter. The call for small stock for ferneries was very large, and there was no decent stuff to be had after February. Speaking of ferns, that Nephrolepis davallioides furcans is a fine thing. We now recognize it as one of the best decorative plants in the trade. The demand is so heavy that we find it impossible to get up stock enough of it. It is most effective when grown in large pots, 8-inch and upwards. What a fine plant Nephrolepis exaltata is for outdoor planting. It will stand out in the sun in a tub or border, all it requires being plenty of water. N. pectinata also stands well outside and makes a good edging for a bed of exaltata."

"How does the demand for ficuses hold out?"

"Why, it holds out well. We are growing a good many to tree form now. We stop them at about a foot high to make them branch. In this way they make the nicest lawn plant there is. The pot should be plunged right in the bed and the hot sun will color the top leaves beautifully. There is nothing nicer.

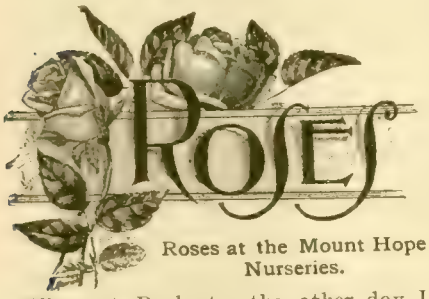
"We think we have found out how to grow the variegated ficus. It wants heat in winter, a temperature of 70° and upward. Above all things, it must not be syringed on the leaves. When it is syringed the edges of the leaves are apt to turn brown and die. It makes a first class plant outdoors in the hot sun in summer. It stands it tip top."

"How do those crotons stand in Fairmount Park?"

"They are showing up beautifully in form and color and attract great attention. Crotons are bound to come as bedders. Florists have just to observe one thing in recommending crotons; that is, they should not be planted before the first week in June. Beds intended for crotons should be filled with pansies or some other spring flower early in the season to keep up the show until the crotons can be safely set out. In growing crotons it should not be forgotten that it is at all times a high temperature plant. While they will remain stunted in a temperature of 60° or less, they will grow like weeds in a temperature of 80° or more. As bedders they are most successful where the thermometer doesn't go below 65° at night."

"We hear considerable lately about your success with cyclamens. Is there anything you can say beyond what you told us in that interview last fall?"

"Nothing, only that if you want good plants the seed should be sown the previous autumn, not later than October, better still in September. Our finest plants are from seed sown the latter part of last August. I would like just to have you see those frames of cyclamen. I say that it is all nonsense, in spite of all that is written to the contrary, to expect good cyclamens in 6-inch pots, in October from seed sown the previous March. Many a man was fooled by sowing cyclamen seed last spring."



"Have you anything new in cannas?"

"We are trying Florence Vaughan. We find it a splendid grower. As a bedder it is first class. The flowers are yellow, large and very distinct. It blooms freely, with fine spikes and is about two feet high. I think it is the best thing out and ought to have as good a run as Madame Crozy had.

"Our people are taking great interest in the Horticultural department of the World's Fair. The amateurs are taking hold with commendable spirit, and are quite willing to send their best and rarest specimens, in order that the Keystone State may be well represented.

"I have been given charge of the shipment of all the plants from here and am responsible for the safe return of those that are to come back. There is an appropriation of $12,000 to defray transportation and other expenses. We wanted $25,000 and ought to have had it. We urged and urged, but to no effect. $100,000 was appropriated for a building which will only look like a pigmy among the giants, while horticulture has to do with a paltry $12,000. Out of an appropriation of $300,000 for all purposes $12,000 seems a small portion for so important a branch as horticulture. The plants are to go first week in October. The state will transport plants for individuals as well as those for the regular, state display.

The idea is to keep all the Pennsylvania plants together. For this purpose good accommodations have been secured in one section of the building, and the state will cheerfully pay transportation charges for plants from those in the trade to and from Chicago. It seems to me it is high time that other states were taking some similar action in order to fill Uncle John's building creditably. It is only in some such way that the desired results can be accomplished."

Roses at the Mount Hope Nurseries.

When at Rochester the other day I called at Ellwanger & Barry's nurseries to see their hardy roses and other ornamental stock. These nurseries have been famous for this line of plants for the past 50 years, and they keep up with the times and get and test every new species or variety likely to be of use to them.

OWN-ROOT VS. BUDDED PLANTS.—There has been a good deal of discussion on the matter of own-root and budded roses, some favor one way and some the other. I notice the tendency about Boston is in favor of budded stock, and that about New York in favor of own-root plants. Ellwanger & Barry grow vast numbers of both kinds to suit the inclinations of their customers, and they tell me that the majority of their patrons favor the budded plants. They think they get finer flowers and a better growth right away, and the Manetti sprout is so easily distinguished from the "rose" that an amateur can very quickly tell which is which and remove the sucker.

MANETTI STOCKS are the only ones used for budding on for they are considered the best. They are imported to begin with, not home propagated, because they can be obtained much cheaper from Europe than they could be raised here, quality considered. They are planted out in open rows 2½ feet apart and got into good growth before they are budded.

BUDDING is now in full operation. The Manetti being in suitable condition a one-horse plow is run along each side of the row to remove the dirt from the stock and this is finished off by a hand hoe and the stock rubbed over with the hand by a boy to have all clean for knifing. The budder gets his bud branches, cuts off the leaves except half an inch or so of the petiole, then carries them along in a basket with a moist cloth over them, taking out one branch at a time as he wants it for cutting the buds off. The buds are cut by inserting the blade of the knife a third of an inch below the eye and cutting upward under the eye and for nearly an inch above it; the wood is then slipped out of the eye. The incision made in the bark of the stock for the reception of the bud is simply T shaped (and not cross cut as is sometimes done) about ⅝ inch across the top and 1¼ inches long, and clean cut through the bark at one touch of the knife. The lips of bark are lifted by the ivory end of the knife and the bud thrust down into the incision, pretty well down, and the lips are then tied down into place over the bark of the inserted bud with bass matting wound several times around, beginning under the bud and ending above it, with a tie at back, but care is taken never to cover the bud itself. A man does the budding and a boy the tying. A thousand buds a day is a man's average work. One thing in particular I noticed about the workmen is, there is no cuddling down at their work, both men and boys straddle the rows and bend over and do their budding, tying or stripping as the case may be. Sitting down or cuddling down at their work is against the rules of the nursery and not permitted.

OWN-ROOT ROSES are also being propagated now from cuttings taken from plants grown for this purpose in the greenhouses. The parent plants are planted in bench beds and kept moist and in good growth just as if they were intended for a crop of flowers, but their sole object is to furnish wood for cuttings. The cutting beds are outdoor fresh hotbeds. These beds are regular sunk hotbed pit frames such as may be seen in any market garden in spring for lettuces or tomato plants, or in a florist's for alternantheras. When the manure is hot throughout it is packed smooth and solid on top and a deep layer of sharp sand placed over it and firmed, and when the heat has declined enough to render propagation safe the cuttings are inserted. Clear glass sashes are then used over them and kept rather close. And over the sashes, or rather over the stretch of frames, and 4 to 5 feet above them is erected a light framework of wooden strips sloping to one side and a spread of canvas or stout muslin stretched over this frame; this gives shade from sunshine and at the same time plenty light. For the first while or until root action has begun the light lattice or lath frames commonly used for shading seedlings or newly transplanted young stock are laid on top of the canvas to increase the shade.

FIELDS OF ROSES.—In one solid field were 80,000 vigorous Manetti stocks being budded and 50,000 rising 2-year old hardy roses passing out of bloom, and a few score yards further along the road was another square of 30,000 of these hardy roses. And there are other patches besides these. An interesting lot of old plants occupies a plat near the greenhouses and comprises every known variety introduced within the past 30 or 40 years or more. This patch is for comparison's sake. Every new rose as it is obtained and bloomed is compared with all the others of its class and its identity or distinctness soon established.

SOME FINE ROSES.—Looking over this vast field of roses notwithstanding the lateness of the season (July 18) one can not fail to notice how prominently some varieties stand out among the host, and it isn't a case of a dozen bushes or so but of a thousand or more, and we argue, if these in mass are so pronouncedly fine the variety is a safe one to have.

MARCHIONESS OF LORNE, rich rose color, long bud, large, full, cup shaped, perfect flower and a perpetual bloomer.

MADAME JOSEPH DESBOIS, white shaded with rose, a very large, fine, full flower, and the plant a vigorous grower.

MADAME GABRIEL LUIZET, a very large, cupped, pink flower.

MARSHALL P. WILDER, cherry carmine, large and full and a vigorous grower. One of the finest roses in the field.

EARL OF DUFFERIN, a magnificent dark crimson velvety flower, indeed, I think the finest of its color in the field, and it had lots of capital blossoms on it then—July 18. Flowers large, unusually full and very fragrant and the plants vigorous and healthy.

PRINCE CAMILLE DE ROHAN, of lesser growth than Dufferin, but a splendid velvety crimson rose. An old favorite.

MRS. JOHN LAING, now fairly well known as a forcing rose, but without a peer among hardy pale pink roses. The flowers are large, full, very fragrant and borne all summer long. Indeed, were I told to pick out the three finest roses in the field I'd take Marshall P. Wilder, Earl of Dufferin and Mrs. John Laing.

PIERRE NOTTING, although old is still one of our best crimson roses, and few bloom more freely in late summer and fall than it does.

ULRICH BRUNNER.—Among forcing sorts this superb variety holds a prominent rank, and it also is one of the very best hardy roses grown. Its flowers are bright cherry red and the plants healthy and vigorous.

PAUL NEYRON for a big flower.

LOUIS VAN HOUTTE, a fine, crimson-maroon rose, well known and appreciated and very free blooming, but a little tender. But I shouldn't wonder if the Earl of Dufferin may displace it in our gardens.

GLOIRE DE MARGOTTIN, a comparatively new rose, and a hardy, vigorous, free blooming variety. The buds are large and long and the flowers scarlet and single enough to open early. Forces well.

ANNA DE DIESBACH, carmine, large and very fragrant. Although an old rose it is still one of our best and hardiest varieties.

ELIZA BOELLE, a hybrid noisette, and among white roses the most prominent in the field. The blossoms are of medium size, quite full, white tinged with pink and borne in great profusion. The plants were bushy and healthy but not vigorous like a Coquette des Alpes.

PINK ROVER reminds one of Malmaison. It belongs to the hybrid teas or the same section as La France does. Its flowers are large, full, flattish when open, white suffused with pink, or rather it is a very pale pink rose, deeper in color at the center. Quite fragrant.

WM. FALCONER.

Palm Notes.

The next three months include the season of most active growth for these plants, and consequently the repotting of any stock of this character should not now be delayed, for each week counts in the growth of palms in the summer and fall. And in this connection it is well to remember that most palms enjoy moderately firm potting, this being especially necessary for those that are likely to be used for decorating, for lightly potted plants soon shake loose in their pots when taken out in a wagon, and it then becomes impossible to water them properly, and as a natural result the plant soon begins to suffer from the combined effects of exposure and lack of moisture.

But at the same time some judgment should be used in the matter of potting, for a stiff, clayey loam does not require much ramming in order to make it firm enough, and where such soil is the only available compost it is well to mix some sand with it.

Different cultivators affect different fer-

LICUALA GRANDIS.

tilizers to assist in the rapid development of salable stock, but one of the most reliable for this purpose is the old stand-by of the plant grower—that is: old thoroughly rotted cow dung, for this seldom does any injury unless used in unreasonable quantities, and in liquid form is also beneficial to well rooted specimens.

Thorough syringing is a great help to the plants, both in promoting the growth and also in preventing the spread of insects, and on bright dry days should be given twice in the day during the summer months.

The practice of plunging the pots of palms in a hotbed mixture to induce a rapid growth is but little used in this country though still in vogue to a greater or less extent among some of our European cousins. This method, however, has but little to recommend it, for the growth secured by this means is too soft to endure much hard usage, and ultimately results in dissatisfaction on the part of the customer.

As the seeds of the various palms in ordinary trade use are received at different seasons during the year, it becomes difficult to fix any special time for sowing such seeds, the only rule admissible being to sow them as soon as received, and if the seeds are in good condition and given reasonable care there will seldom be any trouble in germinating them, though there will be found wide differences in the length of time required for this operation among the different species.

For instance, Latania borbonica will sometimes germinate in ten days from the time of planting, Caryota urens in three weeks or a month, Areca lutescens in about the same time, Cocos Weddeliana in six or eight weeks, and the kentias will sometimes continue to come up irregularly for six months or more; in fact I have sometimes allowed kentia seeds to remain in the stove pots for ten months before potting them off and then discovered among them some that were just germinating.

Seaforthia elegans and Ptychosperma Alexandræ are among the palms that germinate rapidly, these usually starting in from two to four weeks.

But whatever the species it is advisable to place the seeds where they will receive some bottom heat, at the same time keeping the soil reasonably moist without continually watering, for when kept too wet the germs will rot.

Unfortunately, seeds of Rhapis flabelliformis and R. humilis are not offered in the market, and consequently we have to depend on division of the plants to secure a stock of these valuable species, spring and summer being the best time for this operation.

The division of rhapis should always be done in such a manner as to preserve the roots on the divided pieces as much as possible, the latter being potted into small pots and kept rather close until they begin to root afresh.

W. H. TAPLIN.

Licuala Grandis.

This remarkably handsome palm is one of a comparatively small group of stove species and is probably one of the rarest species in cultivation at the present time, from the fact that seeds have only been imported in very small quantities thus far.

It is of dwarf habit, seldom exceeding six or seven feet in height when mature, and produces a rather compact head of bright green leaves, the latter being from two to three feet in diameter and thrown up on slender stems about two feet long.

As will be noted from the illustration the leaves are fan shaped, their margins being divided into bifid segments, and the footstalks are armed with short spines.

Licuala grandis is essentially a warm house palm and needs some care in cultivation, one of the requirements being a rather open soil and good drainage, and at all times a moist atmosphere is necessary for its welfare.

And one of the things to be avoided is the evil of overpotting, it being safer practice not to repot this plant until it begins to show signs of starving, the roots being quite tender and resenting any undue disturbance.

The illustration gives a good general idea of this plant, and was reproduced from a photograph of a specimen in the collection of Mr. H. H. Hunnewell, Wellesley, Mass., the plant in question being certainly a credit to Mr. Harris, under whose long continued care and skill Mr. Hunnewell's establishment has secured an enviable distinction.

W. H. TAPLIN.

Notes and Comments.

A very useful herbaceous plant is Bocconia Japonica, noticeable for its bold effect in lawns or shrubberies. The bocconias are ornamental foliage plants of the poppy family, growing from two to four feet high, some being stove species, but the one in question is thoroughly hardy. The leaves are glaucous, yellowish white underneath; the flower-clusters, produced on the end of the stalk, are yellow-white, resembling the wild thalictrum. A clump of the bocconia makes a desirable feature on the lawn; the plant is not at all common and is admired by retail buyers. They are readily increased from cuttings.

This year we see an increase in the use of aquatics, both in private and public places; the landscape men are making this a great feature in their work. In places where the natural soil is very stiff, lotus ponds are made by simply laying cement on the surface of the excavation, without using brick at all, but in a light porous soil this is not practicable. Men of experience say it is not necessary to make a lotus pond more than two feet deep, that is really all the depth required. The lotus is best by itself, being such a gross feeder that it will crowd other plants out. Where the lily ponds are near the house it will be found prudent to keep a few small fish in them to destroy the larvæ of mosquitoes.

One of the finest shows of aquatics to be seen around New York is at Dongan Hills, Staten Island, where William Tricker, who is well known for his fine chrysanthemums, is now showing equal skill with all sorts of water plants. He grows many choice nymphæas, as well as the nelumbium.

The lotus has the advantage of keeping well after it is cut, making a superb decorative flower, but the foliage is useless to accompany it. Very soon after the leaves are cut they are as limp and shrivelled as rags.

Some little time since the FLORIST had occasion to mention the beautiful Bottle Brush tree—metrosideros, which received much admiration and wonder when displayed in the window of a Broadway florist. It may be well to mention the fact that among English authorities this plant is more generally known as callistemon, C. speciosus being our Bottle Brush. It is a native of New South Wales, introduced some 70 years ago, but it has never become common and may be recommended as a showy thing for greenhouse decoration or use in a private place.

A pretty little plant for the warm greenhouse is the old Eranthemum pul-

chellum; the flower is a clear bright blue, and this color being rather scarce in desirable plants makes the cranthemum all the more attractive. It is an old thing, but not often seen except in miscellaneous collections. The flowers are produced very freely, and the neat dark green foliage makes it a pretty plant at any time. It is nearly allied to the thyrsacanthus, some of the species being synonymous.

Among roses for the retail trade which may be sold in pots, we find Clotilde Soupert taking extremely well, and it may be thoroughly recommended for this use. The little old fairy rose is another suitable for this purpose; people who buy pot roses either in autumn or spring like them to be flowering profusely, and they do not sell readily without this qualification. Hermosa and Agrippina are also excellent for the retail trade. We find in the retail trade that Marchal Neil is the favorite greenhouse climber, being more often asked for than any other. The Climbing Perle is little known out of the trade, but it should take well with amateurs, not only for its continuous blooming but also for the size and excellence of its flowers. EMILY LOUISE TAPLIN.

Berkshire County, Mass.

No more picturesque spot can be found in all the land than this favored country up among the Berkshire hills. The beauty of its scenery and the purity of its air long ago attracted the attention of the wealthy residents of New York and Boston, and to-day the fame of the beautiful private estates of Lenox, Lee, Old Stockbridge and the environs of Pittsfield is everywhere. Nothing that nature can supply, art suggest or wealth procure has been left undone. Naturally it is the paradise of private gardeners. Here, perhaps more than anywhere else in this country, it can be truly said that the gardeners are "lords of the manor." All the beauties of garden, forest and mountain scenery are theirs, and are without doubt a source of enjoyment to them far beyond what they are to their wealth-burdened owners who maintain these princely establishments the year round just for the privilege of a few weeks' occupancy annually and for the balance of the year leave the gardener in unlimited possession.

Such privileges naturally result in the securing of the best talent in the gardeners' ranks, and it is not surprising that a Gardeners' and Florists' Club organized amid such favorable surroundings should show a high average of intelligence and dignity in its membership and should come to be recognized as a horticultural power of no mean rank. The club which was started under such favorable auspices last year, with Col. Cutting as its president, is in an exceedingly prosperous condition. A chrysanthemum show which shall eclipse anything of the kind ever seen here is planned for next November at the Colisseum at Pittsfield, and all the boys are making preparations for a great competition.

Up at Mr. Sloan's Mr. Wm. Griffin has a whole houseful of clean vigorous plants in extensive variety. If they keep up to their present standard until the blooming season they will be hard to beat.

At Mr. Chas. Lanier's jolly Charlie Knight manages to get time, notwithstanding his 240-acre charge, to nurse up a nice batch of the best new varieties, which also at the present time have all the appearance of winners. He has just cause for pride in the condition of his exhibition house this season; crotons, palms and stove plants in variety are healthy and everything is as neat as wax work.

Down by Laurel Lake Mr. C. M. Atkinson presides. He does not enjoy facilities equal to those of some of his more favored neighbors, but his horticultural training stands him in good stead and what he does is well done.

Albert Meredith has charge of Col. Cutting's estate at Pittsfield. As a rose grower he has been wonderfully successful; 20,000 blooms from a house 80 feet long is his record from September to June last season. The orchids are also in fine condition here. There are two big clumps of Cypripedium leucorhodum that would make an orchid fancier's mouth water.

M. K. Jesup's newly laid out grounds occupy the highest situation in Lenox. Naturally picturesque, its beauties have been made the most of by Landscape Architect Bowditch, of Boston, and the planting is progressing rapidly under the hand of Mr. P. Donohue, the gardener in charge.

The Italian Garden.

Referring to the illustration that appeared on page 1125 of last week's issue, Mr. F. L. Harris writes:

"The Italian garden at Mr. Hunnewell's comprises nearly three acres of land and many interesting sketches of it have been appreciated by Europeans generally as well as Americans. The art of gardening 'Topiary work' has here probably been brought nearer to perfection than anywhere else on this side of the water, and all has been accomplished within the past thirty years.

"You will notice the new wall is studded at equal distances with Irish yews in tubs, the trees being eight feet in height, and although they have been in the same tubs for nearly eight years, yet they are in the best of health. The only nourishment given them is plenty of water during the growing season, with an occasional top dressing of guano and bone dust."

Carnation Staking.

Staking carnations in the usual way is a waste of labor, time and money. Take 3-inch mesh wire netting, get it the same width as your beds, cut it 24 inches wide, bend it so that it will form the narrow end of an oval figure, place between the rows of carnations, pressing the edges lightly into the soil, so that the center of the wire arch will be about 10 inches from the soil. The above will suit Silver Spray. The height of the wire depends on the habit of the carnations, as the taller the carnation grows the higher the wire arch should be between the rows. Should the walks in the house be narrow it will be necessary to run netting along the sides. Where there are wide walks I prefer to let them hang over. If florists would try the above (as some of them have) the old-fashioned way of staking carnations would be a thing of the past, and what a blessing! J. H. TROY.

S. A. F.

A CORRECTION.

In our "Entertainment Program," page 1123, it was stated that the White House, etc., would be visited on Wednesday *forenoon*, August 17. We should have said Wednesday *afternoon*. The time between dinner and the McLean reception will be so occupied.

The New York Cut Flower Exchange.

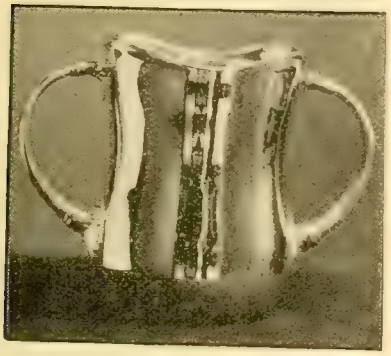
This new venture is the outgrowth of the old "Market," so called, that has existed for years in a couple of small saloons close to the gateway of the Ferry at East 34th street. This old meeting place of the small army of growers from Long Island and their customers from the various retail establishments in New York City and elsewhere has been in years past one of the sights of the town, the only drawback to the entertainment being that one had to get up long before daylight in order to see it, but the visitor was well repaid for his trouble, especially in those good old times when nearly all winter long the supply was short for the demand and the grower was master of the situation.

If a retailer wanted a chance at the nice stuff coming over from Long Island he had to make an early start and indulge in a rough and tumble race with his brother florists to meet and capture the precious load as soon as the ferry boat touched the dock.

But in recent years conditions have changed. With the disproportionate increase in the quantity of flowers grown, the establishment of large concerns on the line of every railroad leading to the city and the rapid multiplication of the commission dealer, the retailers no longer found the necessity for the winter morning pilgrimage and scramble at the Ferry excepting at holidays and other rare intervals of scarcity. The institution still existed, however, but the places of the former patrons were largely filled by hordes of Greeks, who if they did not add to its respectability certainly added much to its picturesqueness, and as one man's money was as good as another's to the growers they were satisfied.

But now the establishment of the new concern puts a different aspect on the situation and judging from appearances the new Cut Flower Exchange is likely to play an important part and to exercise a big influence in the ever increasing cut flower industry of the metropolis.

The location is the second floor of a new building erected close to the old quarters. An association was formed with Mr. I. Forstermann as president, Mr. W. H. Siebrecht treasurer and Mr. A. Schultheis secretary. A working committee of 12 was formed and the result of their labors was the renting for 10 years of this large hall, 404 to 412 E. 34th street. The hall is 75 feet deep by 125 feet long. Wide tables run across it and around the sides, which are measured off and numbered by feet and rented at so much per foot to members and others. The stock of the association is divided into 500 shares at $10 per share, which are sold only to growers and wholesale dealers, no individual being allowed to hold more than 5 shares. A charge of 65 cents per foot per month is made to members of the association and of 75 cents to non-members. Wall space is also let out to supply dealers and others for advertising purposes and a certain portion of the wall tables is reserved for this department of the trade. The hall is open from 5 to 9 o'clock a. m. only.



The venture seems to have enjoyed the good will of the retailers and the trade generally and much assistance in furnishing the hall has been given by firms and individuals.

DO YOU WANT a list of the leading cemetery superintendents? You will find such a list in our new trade directory and reference book.

Coal Dust for Fuel.

Mr. H. Vogel, a florist of Baltimore, has for some years successfully used hard coal screenings or dust for fuel. His method, in brief, is as follows:

After starting a fire with nut coal and allowing it to burn until the wood used in starting is thoroughly consumed, he covers the fire and the whole grate with a mass of coal dust and clay mixed. The clay is thinned with water to about the consistency of cream and one bucket used to eight of coal dust. They must be mixed carefully and his practise is to put on the fire a layer one foot thick.

THE GALT CUP.

He then goes over the whole layer with a poker made of ½-inch pipe and makes holes three inches apart each way through the layer; he claims that this is an essential part of the process, as if more holes are made combustion is quicker, and if holes are not made carefully and entirely through the mass they get closed up and the draft is not sufficient. He then closes his furnace doors, daubs them with clay to make them air tight and depends for draft on a small door managed by a damper regulator.

A fire made thus keeps his houses hot 18 hours, during which time it needs absolutely no attention, and at the expiration of which time, being completely burned out, he breaks up the resulting clinker, takes it out and is ready to begin again. If fire is wanted for a longer time he makes the layer of coal dust and clay thicker. If great heat is required the holes are placed closer together. After the holes are made and the fire is started nothing can be done to it in the way of renewing, increasing or decreasing it until it has burnt out, except that by setting the damper to higher pressure more draft can be secured and consequently more heat.

He uses a boiler of his own construction, being a brick furnace lined with coils of 1-inch pipe and having an ordinary kitchen water heater four feet long by one foot diameter, placed horizontally for a dome. Neither steam guage, water guage or safety valve is used, as he claims the regularity of the heat does away with the need of them. The only conspicuous thing about his apparatus is the depth of fire box required, it being necessary to have two feet clear between grate bars and the dome to allow room for one foot of fire and a bend on the poker 1 foot long to make the holes.

He claims to have heated 4,600 feet of glass last winter with 18 tons of slack and screenings costing from $1 to $2 per ton.

Mr. Vogel also uses coal dust for propagating instead of sand and claims that it keeps sweeter and cuttings root more readily in it. He also makes his own pots, having a small kiln and all the necessary machinery. MACK.

The Bowling Trophies.

We present in this issue engravings of the two cups to be competed for by the Bowling Clubs at Washington.

The Galt cup was presented to the Gardeners' and Florists' Bowling Club of Washington by Mr. Wm. Galt of the Capital city, and will be offered in the name of the club. The cup is of silver, plain, with the exception of some slight ornamentation on the handles. It presents a very rich appearance, and when the name of the winning club is engraved on its polished surface we doubt not it will look still richer—to the winners' eyes at least. The cup is valued at $75.

The Spaulding cup is offered by Mr. T. J. Spaulding in the name of the New York Florists' Bowling Club. It also is of silver and is 13½ inches high and 4 inches in diameter, richly ornamented, as shown in illustration. The reverse side is reserved for an inscription, to include the name of the winning club. It is valued at $100.

The Galt cup will be the property of the club winning same in the contest at Washington. But the Spaulding cup must be won twice by the same club before it becomes their property. Following are the conditions made by the donor of this cup: The cup shall be open for competition to all regularly organized Florists' Bowling Clubs, who shall give 14 days notice of their intention to compete to the manager of the contest, Mr. Theodore Roehrs, 111 W. 30th street, New York City. Teams shall consist of six men each and the trophy shall become the property of the club which first wins it twice, not necessarily twice in succession.

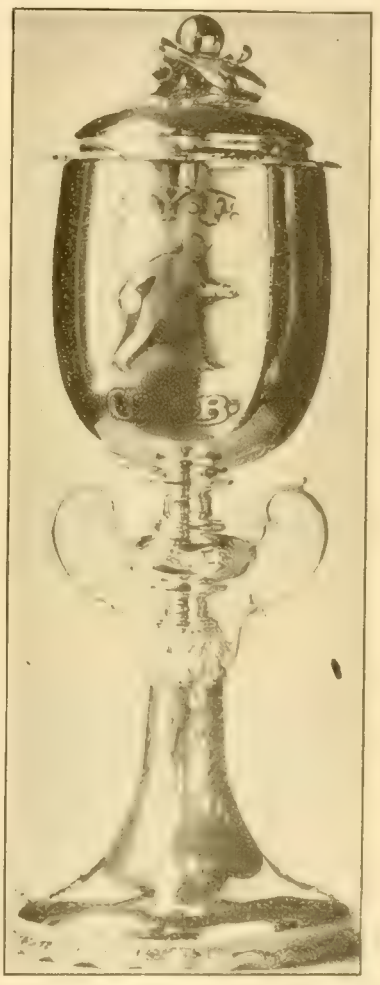
In the Washington notes in this issue will be found the rules under which the contest will be conducted, so far as they have been determined upon at this date.

The contest will take place on the alleys of the Columbia Athletic Club, 17th and G streets, the directors of the above club having very kindly placed the same at the disposal of the Washington Club for the contest.

In addition to the cups there will be a number of prizes offered for the best individual scores.

The management of the tournament and of the contest for the Galt cup is in the hands of Mr. J. R. Freeman, 612 13th street, Washington, to whom all inquiries regarding same should be addressed.

Communications regarding the Spaulding cup should be addressed to Mr. Roehrs as before given.



Washington.

Messrs. John N. May of Summit, N. J., and Theo. Roehrs of New York, were in the city Friday in consultation with Capt. Freeman of the Washington Florists Bowling Club. They came over at the request of Capt. Freeman to make final arrangements for the contest for the Galt and Spaulding cups. I am informed that a program has been arranged which they think will be entirely satisfactory to all interested. The two visiting gentlemen speak flatteringly of the alleys in which the contest is to take place and think them all they should be so far as regulations are concerned, but regretting that the hall is not larger, so that the entire association might get an opportunity of witnessing the contest.

It has been determined that the Galt cup shall be the first prize. Three games will be rolled by each club if the number of entries are not numerous, the first and second games to decide the Galt cup contest and the second and third the Spaulding cup. Those having this matter in charge think this the fairest arrangement, taking all things into consideration.

Mr. Spaulding stipulates that a club must win his cup twice before it can become the property of that club, while Mr. Galt makes no such stipulation, but simply says his cup shall become the property of the club winning it at this convention's bowling contest. Arrangements for other prizes are freely talked of. I hope to be able to say more about this next week.

Messrs. May, Roehrs, Freeman and Smith, after fixing the bowling matter to their entire satisfaction, found their way to the Capitol and were there joined by

THE SPAULDING CUP.

Mr. Benj Durfee. This entire committee then waited upon Hon. W. H. Hatch, Chairman Committee on Agriculture, to see what the chances were for getting our charter through before the adjournment of Congress and to urge Mr. Hatch to have the measure passed before the convention if possible. Mr. Hatch had hoped, under the "Committee Calls," to have gotten the matter up in the House last Thursday, but was defeated by the "legislature cranks," who insist upon the regular order, or that there shall be a quorum in the house before any matter of legislation be brought up, and by their

way of fillibustering defeated several meritorious measures called from the calendar by Mr. Hatch, among them a bill to regulate a uniform weight for grain throughout the U. S., a charter for the Society of American Florists and some supplemental legislation with reference to oleomargarine, and thus the hour set apart for committee calls was frittered away. Mr. Hatch is evidently in earnest and intends making another effort in our behalf, at the next suspension of rules. If we fail in getting the charter this session it will not be the fault of Mr. Hatch.

The wheelmen took possession of our town the early part of the week and thousands of them assembled in convention here, lasting three days. They seemed to enjoy our smooth and wide pavements. C. Strauss & Co., with an eye to business, had in their store window at 909 F. street a full size "safety" made of pink roses, white carnations and balsams. It was perfect in all its parts and was really a creditable piece of work, attracting the attention of many, particularly the wheelmen. It was to be presented to the wheelman winning the one-mile handicap race.

The florists, both in the markets and stores, are complaining of the extreme dullness of trade. There is nothing doing. Weather warm, plenty of rain. Parks and lawns are looking remarkably well in this section.

Mr. Wm. R. Smith, chairman of the Reception Committee, would be pleased to have the secretaries of the Florists' Clubs intending coming to the convention to inform him as soon as convenient by which R. R. they intend coming, whether via the Pa. R. R. or the B. & O. This will aid the Reception Committee in its work.

Mr. J. R. Freeman, 612 13th street, chairman Hotel Committee, will take great pleasure in answering any correspondence from clubs or individuals desiring information as to hotels and accommodations for the convention.

C. LESLIE REYNOLDS.

Toronto.

The flower show held by the Electoral District Society is the all absorbing topic for this week. As usual a marked improvement over former years is quite noticeable and the building (Horticultural Pavilion) in which the show is held is now really too small and does not give half the plants, such as large palms, a chance of showing off their gracefulness and beauty. However, without blowing one's own trumpet, I may say that this show could not be beaten as to the quality of the plants on this side of the Atlantic. (Now let some other rooster get up to crow and come out to battle.) As regards the attendance, it has been far above the average and the ubiquitous secretary, Mr. J. P. Edwards, is accordingly elated. The judges were Mr. W. Scott (Great Scott) of Buffalo, on cut flowers and designs, and Mr. F. G. Foster of Hamilton, on plants.

Now to give some short description of the plants, and perhaps I had better go over the list and take them in alphabetical order, though I must skip over some of the entries.

Achimenes, 6 distinct varieties, first Mr. Houston, Central Prison, with some very fine plants; Mr. J. Chambers close behind. Anthuriums, both flowering and foliage, were not so good as in former years; some of the old plants want pulling to pieces. Tuberous begonias came well to the front, Mr. Houston taking first prize with 12 magnificent plants; Mr. Gilchrist also showed some smaller plants very well flowered. The fancy caladiums were simply immense. Central Prison took first prize for 6 very fine plants. Normal Schools first for 12 plants, cannas; the new French and the older sorts made a big display. Coleus not up to the notch of former years, Mr. Watkins of the Horticultural Gardens and Mr. Graham of the asylum coming in first. The ferns were so good and so numerous that I must enumerate them more fully in the 3 varieties. Mr. Houston took first with immense specimens of Microlepia hirta cristata, Davallia Mooreana and Adiantum formosum; Mr. Geo. Vair second with Nephrolepis exaltata, Alsophila australis and Adiantum trapeziforme; Normal Schools third with Davallia Mooreana, Nephrolepis davalloides furcans and Woodwardia radicans. All these plants mentioned were very fine and well grown and would take prizes at any show. In the 6 varieties Mr. Houston was ahead again, and Mr. Reeves of the Reservoir Park second. In adiantums Mr. J. Chambers took first with six "daisies," Mr. J. Cotterill, florist, running a close second. In 12 ferns Mr. Cotterill was first and Mr. Chambers second. Central Prison was first on tree ferns with fine specimens of Alsophila australis and Dicksonia antactica, Mr. Reeves second. Geraniums made a blaze of color, Mr. Brine's 4 plants of the ivy leaf variety being especially worthy of notice. Mr. Wadds, gardener to H. H. Cook, Esq., took first prize with 6 fine gloxinias. A large plant of Nepenthes Mastersii, shown by Mr. Cotterill, with 14 or 15 pitchers, was quite a center of attraction. Orchids were shown by Mr. Houston, Mr. Cotterill, Mr. Chambers and others. The best specimens were of Cattleya gigas, Vanda cærulea, V. tricolor, etc.

Palms were the principal feature of the show and they certainly were very fine. Mr. Vair's Cycas revoluta was first as a single specimen; Mr. Vair was also first with 3 specimens, one of which was a Kentia Balmoreana, for which $220 has been refused. Central prison was first with 6 specimens, and Mr. Reeves second. In palms in 8-inch pots Mr. Cotterill was first, Manton Bros., with a lot just as good, second.

Stove and greenhouse plants, foliage and flowering, were represented by some of the best plants ever shown here, and that is saying a good deal. The principal prizes were carried off by Mr. Houston, Mr. Chambers, Mr. Cotterill and Mr. Reeves. Subtropical bedding plants in 8-inch pots were shown by the hundred; some fine stuff, too.

There were six entries for the most tastefully arranged group of plants, 12 feet by 5 feet. Of course tastes differ and always will, but I really think Brother Foster was a little out in his judgement of these. The first prize group had for a back center a bougainvillea very full of flowers and next it on each side was a justicia, light pink also; but the two pinks together were awful, and in my opinion spoiled the whole group. Mr. Cotterill came in second with a tasty arrangement of high class plants; next Mr. Laing with a group which with a little color would have been the best, a departure from the regular cut and dried sand bank shape.

The decorated dinner tables were a new feature introduced at the instance of the Gardeners' and Florists' Association and they attracted a lot of attention. Mr. W. J. Laing, with a light arrangement of maidenhair and Cocos Weddelliana, took first and Messrs. Grainger Bros., with a heavier floral center, took second prize.

Bouquets, table, hand and bridal, floral designs and such like were shown galore, but as I am afflicted with a complaint that might be called designophobia, I don't intend to give any description of them except to say that they looked very pretty at a distance and that Scott said they were nearly as good as they get in Buffalo. Messrs. Manton, Cotterill, Grainger Bros., Laing and Westwood were the principal exhibitors.

There was also an excellent show of annuals, dahlias, hollyhocks, petunias, pansies, roses, sweet peas, stocks, verbenas, zinnias.

I persuaded Mr. Edwards to have the show photographed, and I hope the FLORIST may think the one that will be sent soon worthy of publication at some future date.

E.

New York.

Florists do not expect much business at this season of the year, but such a dead season has never been experienced before, if the "oldest inhabitant" can be believed. Seaside resorts and steamers alike are away behind their record. One wholesaler who claims to be doing practically nothing now, states that at a corresponding date last year he had a steady and remunerative trade. When the Saratoga season gets well under way, as it will very shortly, there is some hope of a revival.

No visitor to New York ought to go away without seeing the great display of cannas at Mr. Jas. Dean's place at Bay Ridge. The road and sidewalk are considerably elevated above the grounds, hence a full view of the great field of scarlet and green is obtained. It is not an uncommon sight to see the fence lined with a row of people full of admiration and curiosity, for it is a fact that the great majority of people are unfamiliar with the plant as yet and the question as to its name has to be answered scores of times daily, so Mr. Dean says. The most noticeable feature is the great difference between the Madame Crozy and Star of '91, as seen in a mass from a distance. The Star suffers greatly by the comparison. Mr. Dean has quite a lot of seedlings, all from Crozy, but widely different in color and style. One yellow one is a grand deep shade of color. One chance seedling of which he has got up quite a stock already, but as yet unnamed, is unquestionably the best dark foliaged variety ever seen here and is bound to have a run.

H. A. Siebrecht and wife sailed for Europe on the Adriatic July 20.

The lotus flowers in the lake at Central Park are blooming very freely now and are creating quite a sensation.

Baltimore.

With two months more of dullness in prospect the position of the man who is a dealer pure and simple is no ways pleasant; forced to open his store daily and to stay there, or employ some one else to do so, he finds the occasional orders he secures and the few sales he makes come in at such uncertain hours that it is necessary to open as early and keep open as late as in the midwinter, or else by some perversity of chance miss his best customers whenever they are in a hurry. The man who is both a grower and dealer finds the dull season very acceptable in some ways, and in fact

would be pretty hard pushed if, as in Australia, Christmas came in midsummer. If to the rush of holiday trade the repairing and painting, glazing, etc. of summer were added he would be very apt to slight something or worry himself into a premature grave. As things are at present he shortens sail in the store and is to be found more frequently minus all superfluous clothing superintending pipe fitting in greenhouses where the temperature is extra torrid, than in the shady place behind the counter, or he is helping to shift and go over his stock of palms, or get up those future prize winners at the exhibition.

A trip to the place of Mr. Wm. Fraser, our genial president, showed everything very flourishing, a fine stock of young palms and his newly planted roses in the benches with shoots a foot long. Among his orchids were several odonts and a very fine Aërides odoratum in bloom. The "mums," though, were the pride of the place, and they deserved to be, for they are fine looking plants already and if they are destined to defeat at the show it will not be by anything imperfectly grown to this date.

The only flowers the market may be said to be fully supplied with in good quality are Nymphæa odorata and balsam; everything else seems more or less "off," but the double white balsam and the white water lily are plentiful and good, and good enough apparently for much funeral work, at least in the minds of those who put it up. The lilies can be had for 50 cents per 100, and the balsams for 20 cents. Roses are fairly plentiful at 3 for La France and Perle, about the only varieties to be had in quantity.

MACK.

Boston.

Trade very dull still. Little doing excepting funeral work and not much of that. Carnations are in short supply and sell at sight, especially the white ones. Roses as a rule are poor, very few decent Mermets, Brides or Perles being seen. La France and Malmaison, however, are coming in fair quality. Sweet peas are terribly overloaded and will not pay for the picking.

At Horticultural Hall on July 23 there was a very full exhibition. From J. S. Fay came another large display of hollyhocks. It was prize day for native ferns and gloxinias. Mrs. P. D. Richards took first prize for ferns and W. E. Coburn second. Mrs. Richards showed 52 species and varieties. For display of gloxinias A. Galbraith took first and N. T. Kidder second, but Mr. Kidder's collection, although much the smallest, contained some varieties that exceed anything ever shown here. Benj. Grey made a good showing of nymphæas, including N. odorata exquisita, a beautiful little miniature pink variety, marliacea alba and marliacea chromatella, pygmæa helveola and odorata sulphurea, the latter, a hardy yellow, being awarded a certificate of merit. A collection of superb salpiglossis from N. T. Kidder was much admired.

Friends of ex-President Norton of the S. A. F., will be sorry to learn that his father died the morning of July 25.

A. P. Calder is making improvements in his Boylston street store. When completed it will be nearly double its former size.

Prof. Chas. S. Sargent started overland for Vancouver's on Wednesday, July 27, from whence he will sail for Japan.

Mr. Archie Smith, foreman of the seed department at J. Breck & Sons', is rejoicing over the advent of a ten pound son.

Visitors in Boston the past week: Louis Menand, Albany, W. A. Stiles and H. A. Siebrecht, New York.

Philadelphia.

The "Sure Catch" fishing club, Commodore Westcott in command, starts for Barnegat Bay Monday, July 25. To all who go there is a good time in store, as Commodore Westcott is untiring in his efforts to see that everything goes right and that everybody are enjoying themselves to the full extent. A number of the brethren from New York are also expected.

David Bearn was unfortunate enough to break his arm last Tuesday. It has been set and is doing very well. Davy takes his mishap very philosophically. Pity he hasn't somebody to help him nurse it.

Robt. Craig has been in Pittsburg and Allegheny the past week in the interests of the Horticultural Department of the World's Fair. He has been engaged by the Penna. commission to look after the shipment of all plants and has quite a large job on his hands.

On Saturday, July 16, a delegation of florists from the city stores were invited to Mr. H. A. Dreer's nurseries at Riverton to play a game of ball. Quite a number accepted and everybody had a royal good time. After the game an elegant lunch was partaken of and the merits and demerits of the game freely discussed. "If it hadn't been for that one inning, etc, etc." The score was something like 5 to 11 in favor of the Riverton boys. A return game is to be played in Phila. the first Saturday in August and we hear of some wonderful things that are going to happen then.

Mr. Wm. F. Dreer sailed for Europe July 18 for a stay of a month or six weeks.

Longinette has won the match for the sweepstakes prize and places in the team to bowl in Washington. The full team has not yet been selected, but Charlie is sure of a place at any rate.

K.

Cincinnati.

A large delegation of florists took a trip through the Kentucky hills the other day and on their way visited several brother florists who joined the party ostensibly to take possession of Frank Huntsman's beautiful place. Upon arrival they found the genial Frank perched upon a stump with field glasses to his eyes, viewing the beautiful scenery along the Ohio river.

The place is situated upon a bluff about 300 feet above the river and the scenery for 20 miles around is certainly very picturesque. After viewing the scenery, the greenhouses were gone through, and everybody claimed that when the fall show comes around Huntsman will be "in it," for his "mums" are in very fine condition.

After the greenhouse bath, the "Genial Frank," whose hospitality is proverbial, invited the boys in to a nice lunch, which they consulted as only florists can. Several toasts were responded to, after which the afternoon was spent in outdoor games and the Kentucky boys were found to be experts at pitching quoits.

The party left after the sun had long been behind the western hills, and all pronounced it an afternoon well and agreeably spent.

H. L. S.

St. Louis.

Mercury trying to reach the 100 mark. July 19 at 1:30 p. m. the thermometer registered 96.6°. A few minutes later a dark cloud of dust was seen sweeping down from the north and the temperature dropped to 75° in 20 minutes. A few limbs were blown from the trees, but no great damage was done.

Business is very dull. Roses and sweet peas in abundance. Roses bring $3 and sweet peas 25 cents.

The St. Louis Florist Club held a special meeting July 23 to discuss the report of the transportation committee. It was decided to go in a body by the M. and O. A sleeper will be chartered for the trip. The delegation will leave St. Louis Sunday morning, crossing the Alleghenies by daylight, thus affording views of some of the most beautiful scenery in America. For further particulars address Secretary E. Schray.

Mr. R. Tesson is the only specialist in the city, in fact I believe he is the only one growing cut flowers exclusively for sale to the trade. This ought not to be. There is room in St. Louis for a half dozen such plants to grow roses, and the same number devoted to other specialties. Why should St. Louis send to New York, Boston and Chicago for a large portion of her cut flowers? Some claim that the unfavorable climate is the reason, but any one who will take the trouble to visit our best growers occasionally can not long entertain such an idea. The only reason is a lack of enterprising growers. We have some good growers of mixed stock, but their clip is disposed of at retail in their own stores, while all the stores which have no houses of their own (and these constitute about one-half of the flower stores) depend on shipped stock.

St. Louis has the best shipping facilities of any city in the country, but she is not in the race when cut flowers are in demand, because she has none to ship. We have one firm in the wholesale plant and bulb business that is reaping a harvest from recognizing the shipping facilities that are offered here. There is a harvest for growers of cut flowers who can comprehend the situation.

J. C. DUFFEY.

Chicago.

Weather boiling hot. Trade as dead as it can be.

Mr. John Lane has returned from California and announces his intention of attending the Washington convention.

There promises to be an unusually large delegation from Chicago and vicinity to Washington.

Among recent visitors to the city were Elias A. Long, Buffalo, editor of *American Gardening*; Sam'l Murray, of Probst Bros. Floral Co., Kansas City; C. W. Reimers, Louisville; and F. W. Stukas and wife, Clinton, Ia.

Detroit, Mich.

Quite a liberal list of premiums is offered in the floral department of the Detroit International Fair and Exposition, which begins August 23 and remains open until September 2. The premiums in this department amount to $1,639, of which $650 is offered for plants in pots, $304 for cut flowers, $405 for floral arrangements and $280 for examples of carpet bedding, vases, etc. Mr. B. Schroeter, corner Elmwood avenue and Champlain street, is superintendent of this department, and copies of the premium list may be obtained from him. The entries will close August 15.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A. WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

The Future Work of the American Association of Nurserymen.

BY HON. S. M. EMERY.

The future of this association means the intelligent use of the present, and the lines projected for future work must be co-extensive with those that are now leading to wise results.

"In union there is strength." It is not the words of the few, be they never so wise, that carry conviction, but the intangible, irresistible power of the represented multitude, which is far reaching. It is not what *will* happen, but what *might* happen that influences action, both in those high in authority, as well as those who serve the king. The potentialities are the governing spirit rather than the actualities. This being true, we have a law for organization in this as well as kindred bodies.

The casual visitor might question the advantage of our annual meetings, or the individual benefit as compared with the expense of attendance. This idea would be very erroneous, and that attendant who returns home unrecompensed has only himself to charge with ill spent time and means.

Our officers are charged to see that good and wholesome instruction is provided for the body at large. No nurseryman can afford to be deprived of the actual personal acquaintance with his fellows, and lacking in this, his business of necessity must suffer from such privations.

The information gained from actual experience is limited; life is too short to exemplify every problem, and we must put ourselves in the way of the experience meeting where success and failure are equally exploited.

Knowledge is the grouping of comparisons and a history of the work of others, is the cross cut over the commons that lie beside the pathways of our own lives. This being true, organization and means of consultation must exist, and that which is shown to be of value to one must be for the betterment of the whole. Few are content to do in the future the same as in the past; each business is being extended and the careful control of all departments is imperative.

The nurseryman of to-day is placing too much attention (if such a thing is possible) upon the item of production, depending too much on disinterested parties to dispose of his wares. That a first class tree or plant be produced at a minimum of cost is of no more importance than that the same article be placed to the best advantage with the consumer. That the tree or plant be placed upon its proper merits is the vital duty of every producer.

A personal acquaintance and observation of the workings of the present system of sale of stock prompts the writer to refer to the lack of sympathy oftentimes existing between the producer and consumer.

Do not persuade yourself that because you sell trees in job lots to dealers, who redistribute them to the planter, that after constituting such dealer your duly accredited agent you are not morally responsible for his work. The dealer will spare no pains to impress your individuality upon the customer, and the result of his work is located at your door, where it rightfully belongs.

In the majority of cases the goods are sold upon the credit of the firm who grew the stock, and is there any righteousness or justice in that nurseryman who is a heavy propagator of all that will grow well and make a fine appearance, regardless of quality and season, who advances cash to a foreman to conduct a sale and who, when the sale is made, disavows any further connection with the transaction because he has settled with his salesman on a wholesale basis, the agent's salary and profit, being represented by the amount left in his hands after discharging his obligations to the nurseryman and the expense of his sale. Most assuredly this is not business as between man and man.

Food for reflection may be found in considering the relation of the business to the agent with the end in view to strengthen the bond between the producer and consumer.

The theory of selling fruit to-day may be compared to that horseman who would knock out the eye of his horse so that he might be able to creep up on the blind side and catch him unawares.

The man is selling for each of us who apologetically pleads when called down for flagrant imposition and gross misstatements, "there is no use talking, you have to humbug the public before it will buy." Set him down for an arrant liar and know that for each dollar he books he loses sale for another by his outrageous misstatements.

We are constantly harassed by the fact of doing a great deal of business and of not having enough to show therefor. Do you know that the reason for this is the usual loss to the planter and that in many cases he is receiving and paying for two trees to make a success of one?

Is it not reasonable to suppose that the selection of variety and location of orchard have more to do with this loss than any other two causes? Are you not responsible for permitting the sale of tender sorts and for employing salesmen incompetent to advise judicious sites?

Is it not reasonable to expect that the planter would prefer to pay the same amount for one good tree that he pays for two, one of which he now loses? Would it not materially alter the problem if you did half the present business for the same money?

Ought we not as members of this association to discountenance the practice of selling so many sorts? Does the apple orchardist require more than the best summer, fall and winter apple, with the usual distinction of sweet, sour, cooking and eating from hand? Allowing, of course, for the natural distinctions or divisions of latitude and climate, would not this be in the line of concentration and consequent economy?

There are ways and ways of doing this. The writer has seen a fine young orchard of Gano, Salome, Duchess, Tetofsky, Wealthy, Arkansas Black, etc., 150 trees in all and each and every tree dug from a block of Whitneys. This is a little too much concentration and reflects no credit on the selling firm.

Given one locality in which fruit begs a market and 99 may be found in which it is a paucity. The same is true of shades and ornamentals.

As long as babies are born so long will there be market for the wares of that nursery firm that does a conservative, legitimate work.

From personal experience in what should be called the great northwest I believe that the lines of reformation must be wrought on the wise production and honest distribution of our wares, and that associated effort may well be employed in the elimination of all features that will not bear close scrutiny.

The firms that dare not question the workings of their representatives are hitching the cart before the horse, and that concern that holds its men to a strict accountability is the one that in time will be honored and sought for as a representative firm by the very men whose short lived policy now is tending to wreckage.

In these days of pessimistic views I may be pardoned for quoting a recently received letter:

"I have sold brush a great many years, and I know it is far easier to sell trees to-day than it was 10 or 15 years ago in ———— and ———— and in my travels through the country I firmly believe that three-fourths of the living trees in ———— to-day came from ————."

The people to whom reference is made endeavor to control their salesmen and to have goods sold on merit.

It is difficult for the eastern man to believe that America as a whole, especially the Union, is only beginning to develop, and that our children's children, who will carry on our work, will be taxed to their uttermost to satisfy a growing demand based upon fair business methods.

Chairmen of Committees of the National Gardeners' Club of Washington for S. A. F. Convention.

Reception—W. R. Smith, U. S. Botanic Garden.
Executive—Benj. Durfee, 905 F street.
Exhibition—C. F. Hale, 719 14th St.
Hotel—J. R. Freeman, 612 13th St.
Entertainment—W. S. Clark, Bladensburg Road.
Badge—W. H. King, Wenthorpe Heights D. C.
Bowling—J. R. Freeman, 612 13th St.
Decoration—J. H. Ley, Anacostia, D. C.
Advertising—C. F. Hale, 719 14th St.
Bureau of Information—C. Leslie Reynolds, 1718½ 10th St., N. W.

ROME, N. Y.—The two "Trojans," Morris R. Jones and C. B. Humphrey, are both adding quite extensively to their already large establishments, the former a rose house 150x25, palm house 60x20 and a new office, and the latter two houses, one 92x16 and the other 80x10, for roses. Both gentlemen report excellent business.

MR. WM. SCOTT, of Buffalo, on July 15 lost about 8,000 feet of glass by a hail storm which visited the northern portion of Buffalo. Mr. Scott was insured in the Florists' Hail Association, and he will get his money from the F. H. A. in time to go to the Washington convention.

DO YOU WANT an alphabetical list of the roses in commerce in America, with the class, habit, date of introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

SEND in your advs. now for our convention supplement.

GARDINER'S
Rare and Beautiful
PANSIES.

NEW SEED of the following noted strains is now ready. It will be observed that prices are much lower on most of the newer strains this year. Your orders will be esteemed.

Address THE AMERICAN FLORIST CO., Chicago.

Utica, N. Y.

Peter Crowe is quite a land owner now, he having purchased 24 acres just outside the city limits. At present he will raise grain and fodder for his stock, but if his business increases the next few years as rapidly as it has in the past few, he will cover his new purchase with glass. Plans are already made for three new houses, of which two will be 65x20 and one 185x11, for roses, violets and palms.

J. C. Spencer will build two houses, one 50x21 and the other 50x10, for roses and violets.

The sales of bedding plants this season was very large. There was not enough stuff to fill the demand, though last year the growers were overloaded.

Mr. Wm. Matthews reports that he has had all he could attend to in shipping orchids, the demand for which steadily increases. His house of grapes is looking A 1, thanks to the energy of his son Fred. He has been cutting some early Hamburghs that realized $1.50 per lb. in the home market. He will build a new carnation house 100x20. B.

SEND in your advs. for our convention supplement early and thereby oblige the publishers, as well as securing the best display.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not a limited under this head.

SITUATION WANTED—By a florist of 12 years' experience in growing roses, palms and cut flowers. Address O K. 176 York St., Cincinnati, O.

A SPLENDID OPENING

for practical florist—South. Small capital. Cut flower trade upwards of $4,000 yearly at retail. No competition in growing. Will help the right party in getting started. Must be No. 1 man. Address W, care American Florist, Chicago.

SPECIALTY FLORIST BUSINESS FOR SALE.

I offer my business of rooted cuttings, stock, greenhouses, etc., at a fair price. The greenhouses to be moved from present location. Correspondence solicited.

S. B. FIELD, Roselle, N. J.

FOR RENT.

Twenty greenhouses, all heated by steam, in a large western city; well located for business, being within one block of principal cable line and doing a business of $15,000 to $20,000 a year. The place is well known and does a large shipping business in adjoining states. One half of the houses are at present devoted to cut flowers, balance to plants Stock, tools, wagons, horses, etc to be bought by the one leasing the place This is a good opportunity for anyone who has the capital to run a place of this size. And I will rent the place low as other business in which I have engaged occupies my entire time.

Do not answer this unless you mean business and have the capital which a place of this size demands. Address

BOX 50, care Am. Florist, Chicago.

The Seed Trade

AM. SEED TRADE ASSOCIATION.

J. C. VAUGHAN, Chicago, president; A. L. DON, New York, secretary and treasurer. The eleventh annual meeting at Chicago, June, 1893. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

The Employes.

It has often occurred to the writer—why the employes of the American seed houses should not have an association as well as the proprietors. If the latter find their meetings of so much benefit how much more would their help? The bosses have everything to say, while their men have to be silent, because, although having interests in common, they never have the opportunity to consider *together* the experiences of the past or to guard against the possible emergencies of the future.

It is a well known fact that those working in the seed stores in this country are shamefully underpaid—as a rule—considering the strain and long hours of a busy season, and that when the rush is over their situations are not secure.

One Boston firm has shown a laudable desire to ameliorate the condition of the young seedsman by establishing an employment agency for such as may be in want of work. But have the men made any effort themselves to improve their state? If other firms were to take a particle of the interest which this firm has shown undeniable proof towards strangers in their own hands, such an association as the writer hints at would be unnecessary.

Now that business in the seed trade is nearly at a standstill a move might be made in the direction of establishing a club for themselves. It does not appear fair that out of all the employers of labor in the nursery and seed trade in the states one firm should assume all the trouble of attending to the wants of the employes, no matter how willing these Boston gentlemen may be, and especially when the men have the power to better themselves if they care to move in the right direction. Perhaps the AMERICAN FLORIST could do as much as the men if it would open its columns for a few weeks to those who care to discuss the above.

B. S. SCOTT.

[The statement that seed store employes are underpaid in this country will to some require proof, as we understand they receive more in America than in any other country. Regarding another question raised, that of "employment agency," we are informed that nearly every American seed house keeps on file regularly a list of all seedsmen, gardeners and florists in want of places, at, in many instances, quite an expense in time and correspondence.—ED.]

INCORPORATED.—The New Seed Company, Chicago; capital stock $10,000; incorporators, A. T. Armstrong, H. W. Simmons and George C. Wright.

Sitting Flowers.

Here is a specimen of the New York *Evening Advertiser's* exclusive horticultural information as dispensed to its appreciative readers:

"Delphinium formosum is now in a Broadway florist's. This is a very handsome shrub. Acillia is also sitting in a pitcher near by this delphinium formosum. Quantities of the pink orchid anthurium sit near by."

LILIUM HARRISII (Bermuda Easter Lily).

PHOENIX NURSERY COMPANY
Successors to SIDNEY TUTTLE & CO., BLOOMINGTON, ILL.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is

Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.

Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum.
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.

Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.

In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

Shipping Funeral Designs.

We noticed the communication in the issue of the 7th from L. F. D. in regard to shipping funeral designs, and we take the liberty of giving your readers our method of shipping. While we too sometimes use the style of shipping case L. F. D. mentions, yet as a rule we use a more substantial case. We have in use at the present time eighteen cases of different sizes, from the size required for a single piece to those holding several small or one very large one. They are made of light material, sides, lid and bottom of ⅜ and ends of 1 inch stuff, dovetailed and glued together. They are lined on the inside with heavy paper and light oil cloth, making them dust and frost proof. The larger cases are arranged with movable slat sections, so that the forms are fastened to the section with strong wire and then placed in the case at any height or angle desired and fastened with a simple thumb screw.

We have a large trade among undertakers in the surrounding towns for a distance of 100 miles or more and we find these cases most convenient, always ready, and almost as light as those made from lath and paper. We also save valuable time by having just what we want on hand at a moment's notice. The cases are returned to us at a cost of 10 cents by the express companies as "empties." We think our fellow florists who do an out-of-town business will find these cases a good thing to have. We still have some in use that have done service for seven or eight years and are still in a good state of preservation, though having travelled thousands of miles.

We are very particular to keep the cases neatly painted, a light drab trimmed with black, and with a neat and attractive shipping tag they are by no means a mean "ad." as they often lay around the depot and express office for a day or two on their return trip. We also fasten iron drop handles on each end of the cases for convenience in handling.

F. W. BEACH.

CHINESE PEONIES

Zirngiebel's GIANT MARKET and FANCY PANSIES

New crop seeds of those superb strains now ready, in trade packets of 1,500 and 600 seeds respectively, at one dollar each.

DENYS ZIRNGIEBEL,

NEEDHAM, MASS.

GIANT PANSIES.

It's the **BIG PANSIES** that "take the cake" now. The best is none too good for your trade. The plants I offer are the Zirngiebel strain—best there is. It costs more than strains ordinarily sold, but I offer strong stocky seedlings. August delivery and later, at usual price: 75 cts per 100 by mail; $5 00 per 1000 by express. Strong transplanted plants, many of them showing bud, $1 25 per 100; $10 00 per 1000.

SWEET PEA SEED.—SPECIAL TO THE TRADE.

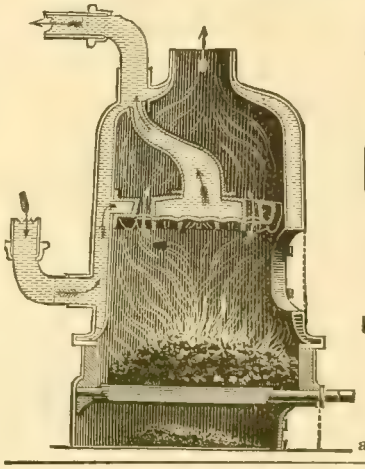
Orders are solicited for Fall Delivery, in quantity, of this season's crop of the choice Sweet Pea varieties, named and mixed, that we grow. Please send for trade list.

427 and 429 Sansome Street, SAN FRANCISCO, CALIFORNIA.

NURSERIES: MENLO PARK, CALIFORNIA.

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.



That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

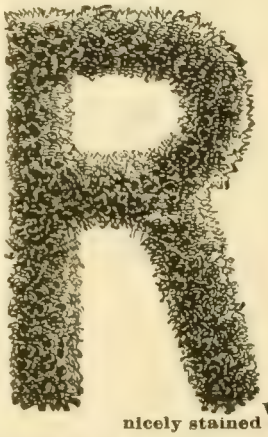
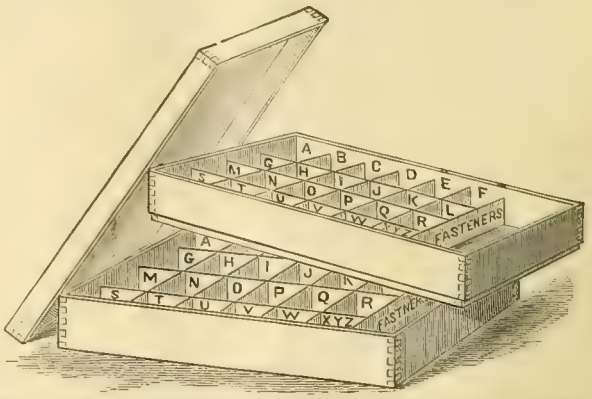
Don't be Bashful.

The following is from a fair but unknown correspondent in Virginia, and is one of the most pointed of its kind that I have seen for many a day. Perhaps some of my brethren who are more fortunate than I am may like to fill the order.

WM. FALCONER.



VIRGINIA, June 30, 1892.



MR. FALCONER:—Will you not please give me some flowers for my greenhouse this winter? I do want some cacti, winter blooming bulbs and rare plants, a Canna, Star of 1891, Black Calla, Chinese Sacred Lily, Candidum and Harrisi Lilies; Red, white, pink and variegated Camellia that will bloom this winter. Ferns, Primulas, Petunias double, I have the single; Cineraria, Cyclamen, Fuchsia, Abutilon, red, white, pink and yellow. Hibiscus Chrysantha, Azalea, Carnations, Anthemis Corcnaria, Oxalis Ortquisi, Manettia Bicolor, Heliotrope Albert Delaux, Sapphire and Virgin, Chinese Primrose. White and blue double violets, double white, red and pink Bouvardia. Smilax, a new dwarf ever blooming Calla lily, I have four of the large varieties. I am so anxious for these flowers and am not able to buy them, so please do, if you can, give them to me. I have a splendid place to keep them this winter. I want to try and see if I can not begin a greenhouse and so help to make a living as I grow older. I love flowers dearly and they do me for they always grow and flourish with my care. Please please, Mr. Falconer do, do send if you possibly can. Won't you?

Solanum Grandiflora, Rainbow Senilis Cactus, Butterfly Orchid and red, white, pink, yellow and purple Hyacinths.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

Now is the time to prepare your advertisements for our annual convention supplement.

With an order for 500 letters, we furnish a box made of wood, nicely stained and varnished, such as is represented in the cut.

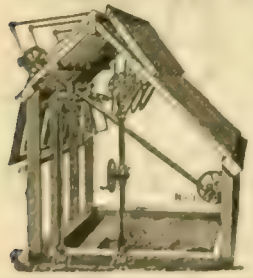
How I Stopped a Leaking Pipe.

My main pipes from boiler are 4-inch. On the end of the mains under side benches there is a branch or T hubbed to receive three 2-inch return pipes. In putting in the pipes I broke one of the hubs off. I clamped it in place with a stirrup and red lead and it was all right until midwinter. The return pipes had settled a little and in lining them up I disturbed the broken joint. I tried wrapping it with hemp and lead but the hot water would break through. It ran a stream the size of a straw. Having on hand some water lime and sand I laid a couple of brick under the pipe and covered the brick with cement. I then took a piece of pine $\frac{3}{4}$ inch thick and 6 inches long, bored a $\frac{3}{8}$-inch hole through and cut the top down to the hole for about 1 inch in length; this acted like a sugar spigot. I slipped it under the pipe so the stream of water would run in at the part cut out, the water now being conveyed out a few inches. I then built cement around the spigot and all over the pipe. The next morning the cement was set. I then made a small plug and stuck it in the end of the spout and that ended the leak.



Coshocton, O. M. J. SCHOTT.

Local Societies.

Mr. H. E. Jephson, secretary of the Eaton, O., Floral Society, and who is also a florist, writes telling us of the success of the society, which now has 120 members, and of the value it has been in stimulating a love of floriculture among the people, and thus proving indirectly a great benefit to those in the trade. He advises florists in other places to take the initial step in the organization of such a society in their own town and is assured that with but little well directed work there could soon be a thousand such societies in the country, and that the aggregate good to floriculture would be difficult to compute. He mentions the giving away of 75 plants of chrysanthemums to those who would grow them for exhibition, as a feature that has developed a great deal of interest in the coming exhibition of his society.

IF YOU have not already ordered a copy of our new directory and reference book you are missing a good thing that you ought to have. Remember that it contains not only a list of those in the trade but a vast amount of reference matter of great value to every reader of the FLORIST. The reference lists of roses, chrysanthemums and carnations are alone worth the price of the book.

LAST CALL for advs. in the convention supplement.

OUR convention supplement will be the greatest photograph album you ever saw.

DO YOU WANT an alphabetical list of the chrysanthemums in commerce in America, with class and a brief accurate description of each one, and synonyms noted? You will find such a list in our new trade directory and reference book.

Trade Plants for Autumn Use.

After the bedding season is over the retailer with a general trade must decide on his autumn stock, preference being given to attractive plants for amateur buyers. The usual demand will be for flowering plants, especially when the purchase is limited; people have to be educated up to foliage plants, and in many localities their sale is limited.

Foremost among retail plants for the autumn trade are the begonias; they give a good appearance at all times. There is no need to go in for an extensive list of varieties; we notice that among those to be commended for good blooming and free growth, B. rubra, B. coccinea, and B. nitida always sell readily. They are all three admirable for pot culture and easily propagated. Planted out in a bed or bench they grow very rapidly, and provide flowers for cutting all the year round. Among foliage begonias the old rex is too well known to need more than a passing mention, but it is always in demand. We find that the beautiful colored Louise Chretien proves highly attractive to purchasers, possessing the merits of rex with the addition of novelty in color. It must be remembered that Chretien does not propagate from the leaf, like rex; it requires an entire cutting. We find that a large rex or Chretien placed in a fancy pot takes very well, and naturally it can be sold for less than most other decorative foliage plants.

Well grown carnations in pots seem to increase in favor; tall stalky plants are a mistake for this use. They should be pinched into shape, and kept free from spiders, as the attractiveness of the plant depends largely on good foliage.

Buyers of the amateur class always look for what they call "thrifty" plants, and it pays to keep them clean. Good pot carnations are not always on hand, most people planting them all out, but most retailers will find sale for them, if good plants of standard varieties.

Autumn usually brings a fair trade in palms and other foliage plants. Ficus elastica is a general favorite, and so is Pandanus utilis. The variegated ficus is much admired, but it seems rather more tender than the other. In propagating ficus, pandanus, crotons, etc., the most successful growers use cocoa fibre for the propagating frame. This material is less used here than in Europe, but experience proves its value, and its use is increasing in this country. Pandanus depend largely on color for their value; if rusty or burned they are rejected by wholesale and retail trade alike.

I have seen P. Veitchii doing very well as a house plant, and of course it is much handsomer than utilis, but people often seem to think it must be more tender. In point of fact there is little difference between the two; many who use the plants in decorating assert that Veitchii stands knocking around the best of the two, as utilis easily becomes rusty with neglect. Very large plants are a mistake in the retail trade; a medium size is preferred.

Among retailer's palms, though Latania borbonica is a good standard sort it is not so attractive in small specimens as some of the others. A big latania is always a fine sight, but small ones look stiff when compared with kentias or seaforthias. Kentia Belmoreana, Areca lutescens and Seaforthia elegans are three standards always in vogue. It is easy enough to raise them from seed, but so many of the specialists offer palm seedlings at extremely low prices, to say nothing of those that come into the auctions, that the small grower often finds it quite as satisfactory to buy the seedlings as the seeds.

An extremely good plant for autumn as well as summer sales is the grevillea, which is known popularly as the Silk Oak. It is very desirable for a small conservatory, making fine specimen plants.

Aspidistra lurida and A. lurida variegata will come in at this season, particularly where needed for boxes either in a hall or shaded window during the winter. One of the great attractions of this plant is that the amateur can not kill it; it flourishes under the most discouraging circumstances. It is very nearly hardy, and is not affected by shade or draughts, so is a good thing for use where other plants would not survive. They are increased by suckers.

EMILY LOUISE TAPLIN.

Useful Plants.

Rohdea Japonica var.—This may be considered among the useful plants for filling vases or window boxes, or for any other position where a low growing variegated plant is desirable; its habit being somewhat similar to that of Reineckia carnea var.

Rohdea is, however, a much hardier plant than the above, and has narrow leaves edged and sometimes striped with white, the foliage being of very stout texture and produced in a compact tuft.

No special care in cultivation is required and a temperature of 45° to 50° is sufficient during the winter, propagation being effected by means of division.

Acorus Japonicus var.—This very pretty dwarf Sweet Flag has been noted before in the columns of the FLORIST, but well deserves another reference from the fact that it is one of the best variegated plants for putting into fern pans to give variety in foliage, and also possesses the good quality of lasting well under such conditions.

Acorus Japonicus var. seldom grows more than six inches high and forms a little tuft of erect foliage, the latter being dark green and striped with white. It is propagated by division and enjoys rich

loam as a soil and an abundance of water.

Lasiandra macrantha is one of the plants that might be more widely spread than it is at present, one of the uses to which it may be put being as a bedding plant, its showy flowers being of an uncommon tint among the plants generally used for bedding.

The plant in question is a strong growing subject with rather woolly leaves and produces its saucer shaped flowers in great profusion all through the summer, these being three or four inches in diameter and deep purple in color.

Lasiandra macrantha flowers in quite a small state, and in order to get nice, bushy plants they should be pinched occasionally. Cuttings root easily when placed in a warm house, and the matter of soil does not enter specially into its cultivation, though an abundance of water is necessary.

Dichorisandra undata is a small growing stove plant introduced many years ago, but still remains rather uncommon. The leaves of this species are from three to four inches long, of oval shape and dark green with veins of lighter shade, the under side being dull purple, and the surface of the leaves is undulated in a very peculiar manner.

This is an easy plant to manage and thrives in a moderately shaded house in which a temperature of 60° is maintained, and cuttings root very readily at any season, so there is no difficulty in securing a stock of nice young plants that will be found very useful for fern dishes and window boxes, or possibly for table designs.

Begonia glaucophylla scandens is another old plant that would stand a little more pushing, especially for retail trade, there being probably no other begonia so well adapted for growing in baskets.

Under this system of cultivation it makes pendent shoots that sometimes reach a length of three or four feet, these producing an abundance of coral red flowers from the axils of the leaves, and having a remarkably good effect.

B. glaucophylla scandens will grow very rapidly in a warm house, and like the rest of the genus, is easily multiplied by means of cuttings. W. H. TAPLIN.

The Nomenclature Committee.

Do not forget that this most important committee will meet at Washington on Monday p. m., August 15, the evening preceding the opening of the national convention.

The work of this committee is of the utmost importance to every one engaged in any branch of our business. It stands for protection from swindling and deception, it endeavors to secure to the raiser or introducer the legitimate recompense of his efforts, it aims to so direct and aid that mistakes made through ignorance may be avoided, and that our business may be conducted on the highest plane of intelligence and honesty and our good reputation in the commercial world be enhanced.

But the committee can do little of itself without the support and assistance of the trade at large and the members of the society in particular. If you know of any case of doubtful naming, any misrepresentation, any practice whereby a purchaser is likely to be deceived or misled in any way regarding goods purchased, it is the province of this committee to investigate and to do all in its power to remedy, and it is your duty to bring such matters to the attention of the committee. A great deal of good has already been accomplished and with hearty cooperation much more remains to be done. Send all communications to the secretary, Wm. J. Stewart, 67 Bromfield street, Boston, Mass.

Washington Hotels.

Below are given the names and locations of the hotels with which rates have been made by the local committee for convention week, together with the rate per day secured:

Made's, cor. 3d street and Penna. avenue, N. W., American, $2.

Belvedere, N. W. cor. 3rd street and Penna. avenue, American, $2; European $1 and upward.

Reuter's, 4½ street and Penna. avenue, American, $2; European, $1.

Meyer's, 470 Penna. avenue, N. W., American, $2; European, 75 cents.

Metropolitan, Penna. avenue, bet. 6th and 7th Sts., special rate, American, $3.

Ebbitt, cor. 14th and F streets, special rate, $3, no charge for parlors.

St. James, cor. 6th street and Penna. avenue, N. W., European, $1 to $3.

Howard House, cor. 6th street and Penna. avenue, special rate, $2.

Randall, S. E. cor. 15th street and Penna. avenue, American, $2.50.

Riggs, cor. 15th and G streets, N. W., American, $3.

Arlington, Vermont avenue and H St., N. W., special, $4.

Welcker's, 15th street near Penna. avenue, N. W., American, $3; European, $1.

Hotel Johnson, cor. 13th and E streets, N. W., European, $1 to $2.50 each.

Willard's, cor. 14th street and Penna. avenue, American, $3 and upward.

American House, cor. 7th street and Penna. avenue, American, $2.

Cochran, cor. 14th and K streets, N. W., American, $3.

Normandie, cor. 15th and I streets, N. W. Special, $3.50.

Oxford, cor. 14th street and New York avenue. Special, $2 50.

Hillman House, North Capitol street, bet. B and C streets, N. E., $2 and upward.

National, cor. 6th street and Penna. avenue, American, $2.50; European, $1.

Hotel Arno, 16th street between H and I streets, N. W., American, $3.

Chairmen of Committees of the National Gardeners' Club of Washington for S. A. F. Convention.

Reception—W. R. Smith, U. S. Botanic Garden.

Executive—Benj. Durfee, 905 F street.

Exhibition—C. F. Hale, 719 14th St.

Hotel—J. R. Freeman, 612 13th St.

Entertainment—W. S. Clark, Bladensburg Road.

Badge—W. H. King, Wenthorpe Heights D. C.

Bowling—J. R. Freeman, 612 13th St.

Decoration—J. H. Ley, Anacostia, D. C.

Advertising—C. F. Hale, 719 14th St.

Bureau of Information—C. Leslie Reynolds, 1718½ 10th St., N. W.

Lycopodium Phlegmaria.

Visiting the greenhouses of Mr. W. C. Wilson, Astoria, several years ago, I was particularly struck with a tiny piece of the above growing *top downwards*, and he, noticing my admiration, offered the plant for my acceptance. Thanking him, I have since then grown it in an ordinary orchid basket suspended in a shady place in a tropical house, giving plenty of water at all times and once in a while renovating the basket with live sphagnum, peat and charcoal. F. L. HARRIS.

Leaves of Advice From a Limb of the Law.

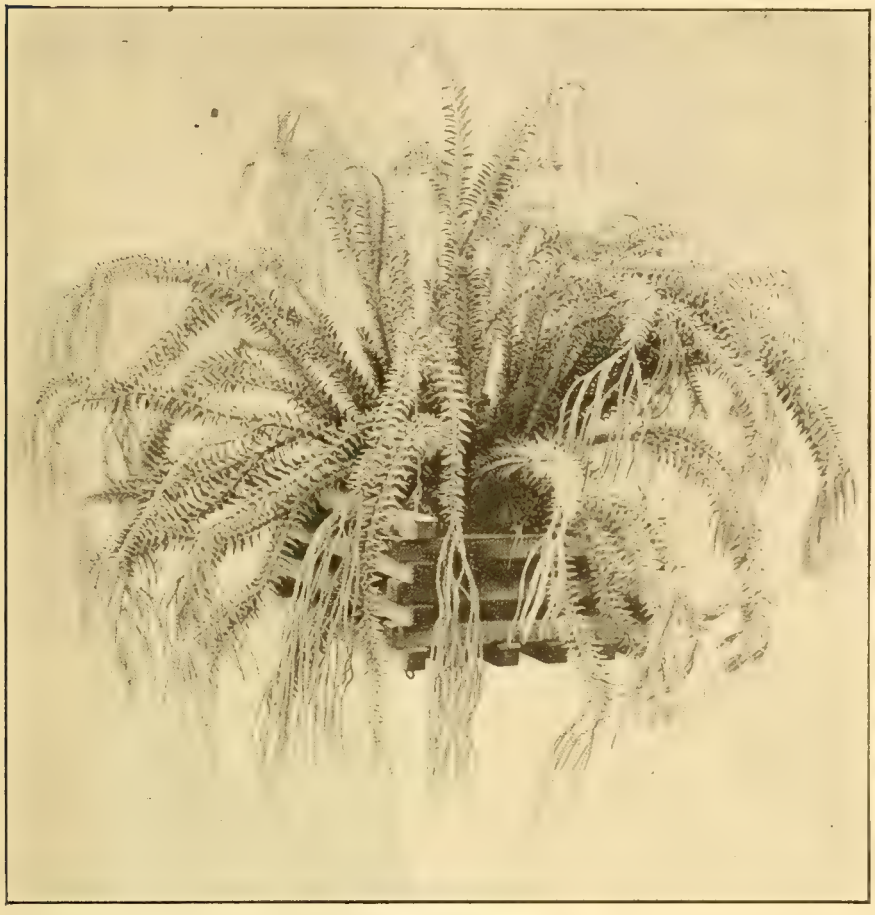
(*For young florists*)

XXXII.

ABOUT CHECKS.

Had some difficulty with a check have you? State the case. I may be able to use it as a text for a little sermon on this subject of checks, a very important one for the young business man.

You say a stranger called at your place of business, bought a very handsome basket of flowers and in payment handed you part cash and a check for $10 drawn by Willow & Ware of this city to the order of J. Fairfellow, whom you supposed to be the gentleman buying the flowers. You indorsed the check and sent it in settlement of an account to Peter Clay, of Potteryville, maker of flower pots. He indorsed it and passed it through his bank. In due time it came back to the bank of this place which paid it and charged it up to the account of Willow & Ware.



They never drew the check. It was a forgery. The bank must lose the money unless it can show that you or somebody through whose hands the check passed had knowledge of its fraudulent character. You all gave value for it. It is a general rule and one which is based upon correct principles of law and equity that a bank should know the signatures of those confiding their property to its safe keeping, and if it be so careless as to pay out money on a forged signature it must suffer the consequences.

I need not call your attention to the fact that if the bank had detected the forged character of the check then you would have been the loser, for each subsequent endorser would in turn have come back upon his preceding endorser until you were reached.

Now you say why may not the bank in this city come back on the bank in Potteryville? Simply because that bank was only put upon reasonable inquiry. It could not be expected to know Willow & Ware's signature. It only cashed the check on the strength of old Peter Clay's endorsement and he is good for all the checks of that amount which you could draw in a day's time.

If you think a check has been destroyed and draw one bearing the same number and your bank cashes first one and then the other you would not be entitled to recover the amount of the lost check, for you should have given notice of the fact to your bank. Bank officers are, it is true, supposed to be experts and to look upon a check with a trained eye, and they are not permitted by the law to take any great chances save at their own peril. Yet they are not omniscient. But you as a trader are not required to identify a customer. If he appears to be a respectable man and there is nothing suspicious about the check which he presents you should take the chances, exercising always reasonable caution.

But now comes another phase to this question. Suppose you had endorsed this check and deposited it in our bank which charged it up to the account of Willow & Ware. Upon their repudiation of the check the bank would simply turn around and deduct $10 from your account, because you see the bank would have a right to regard it as a *new* contract; in other words to allege that it trusted *your* endorsement. But in the case which actually happened the check came to the bank from strangers and there were no privities between you and them.

LYCOPODIUM PHLEGMARIA.

Yes, as you suggest, your endorsement was on the check, but as between you and the bank it was only presumptive and not conclusive evidence. You must understand that when you endorse a check you in reality draw a new check; you put a new instrument into circulation and if I take it I give you the credit and not the maker who may be entirely unknown to me, hence *as between us* you would have no defense to your endorsement. A young business man can't be too careful how he accepts a check from a stranger. Yes, I know that flowers are perishable things and must be sold, but at the same time the florist should also bear in mind that when a young man's fancy turns to thoughts of love he begins to cast about how he may procure some flowers for his sweetheart, and I'm sorry to say he is not always over scrupulous in his methods of procuring them. You may remember how nearly you came to being fleeced by a sharper with a certified check.

Now it is no more trouble to forge a certification than it is to forge the check itself. It takes a little more time to have a stamp cut, etc., but some dealers are fascinated by the sight of a certified check. It is as good as gold to them. But the trouble is not that the certification is not correct, for it often is, but that the check was "raised" before it was certified.

I recollect you had an idea that the bank would be liable for the face of the "raised" check.

By no means. If you give the subject a moment's thought you would see that if that were the law no bank would dare certify a check without first sending to the makers to ascertain if they had drawn a check for that amount. True, the bank must not be careless, it must exercise the greatest caution at all times.

How then are such dangers to be obviated? By the maker of the check using all known precautions to prevent his checks from being raised. He should use safety paper; he should so crush the paper where the amount is written as to make it next to impossible to alter the figures; he should with a punch cut the figures out of the paper entirely, or he should make use of an ink specially prepared to resist the action of acids.

Yes, you're right, a small business would hardly justify these precautions, and yet, it is exactly the small business which is least able to bear a loss of any kind.

A check should never be allowed to grow old. It ought to be presented at once. A good business man always deposits his checks the same day he receives them if possible. At any rate he ought not to lay them away in his drawer without endorsing them and writing the words: "For deposit only to the account of." This prevents any dishonest clerk from appropriating the proceeds of one of them. Nor will a careful business man ever pass a check away by endorsing it in blank. Special endorsements are the only safe ones.

If the maker of a check spells your name incorrectly, endorse first following his spelling, then endorse correctly thereunder.

It sometimes happens that you desire to have the payee's signature on the back of the check, and no other; in that case make it payable to him without the words "to the order of."

Some business men have a way of making a check payable to a man's order, allowing him to endorse it and then certifying as to the correctness of the endorsement by writing the words "endorsement guaranteed" or "endorsement correct" and signing their name. A bank will pay such a check to anyone presenting it—in the absence of course of anything to arouse suspicion. But such a course is only advisable when dealing with responsible and trustworthy parties.

You ask me what would happen if two or more holders should present checks at the same moment and the drawer's account was not large enough to pay both or all? Well, that is a moot point. I have known of cases where an account was not large enough by a few dollars, say, of the holder going to the receiving teller's window and depositing the necessary amount to the credit of the short account and then returning to the paying teller's window and cashing his check.

A bank may for even slight cause refuse to pay a check, even when quite regular, for in most states it is not an absolute transfer of so much money. A bank you must recollect is not a principal but a trustee, acting in a fiduciary capacity, a thing already explained to you. Hence a telegram from the maker would justify the bank withholding payment.

Mr. Micawber to the contrary notwithstanding, a check or note of hand is not payment until paid, and while you may by failure to present it in time lose the amount by the bankruptcy of the maker, yet you will be allowed to prove your debt just the same.

Keep your check book under lock and key, number your checks and don't by leaving blank spaces encourage sharpers to raise the amount.

UNCLE BLACKSTONE.

Boston.

Cut flower trade livening up a little. Funeral work is plenty, for the same spell of dry, scorching weather that has burned up the lawns till they are as brown as in February and has dried up the leaves on the trees, has also had its effect on suffering humanity and the florist has profited by others' misfortunes.

White flowers sell well. White sweet peas bring three times as much as the once proud Blanche Ferry. Carnations are scarce and white ones go at sight or before. Asters are beginning to come in plentifully. In roses the best price is paid for La France. The finest red obtainable now is the Wootton. Some fine specimens of this rose are coming from Newport. There was a time when Boston could not supply enough roses for Newport in the summer. Now Newport has to dispose of her surplus in Boston. There are very few good white roses to be seen. Where they are of salable quality they sell well.

The annual outing of the Gardeners' and Florists' Club took place on Thursday, July 28, at Lake Walden, Concord. This is the first variation from the long established custom of a harbor trip on these occasions and it was predicted that the attendance would be very small on that account. Happily these predictions did not prove true, the number attending being as large as it was last year. The make-up of the party was somewhat changed, however, the younger element largely predominating and many of the old standbys being missed. There was quite a number of ladies present.

Everything passed off pleasantly and all enjoyed themselves thoroughly. The boat race was won by T. F. McCarthy, the wire design manufacturer. A handsome ring was the trophy. In bowling Sam Coleman won first prize, a ring, and Tom Cox second, a pin. There was a lively game of base ball between a picked nine and a team representing the employes of the Public Garden, which was won by the latter. Little Elijah Wood did some great pitching and between spells spent his time circling round big D. J. Pendergast, who was umpire, in the customary and legitimate attitude of defiance, all of which had a wholesome effect on said umpire. A feature of the game was the graceful base running of W. H. Long, all of whose performances elicited great applause and proved him the star of the aggregation. There was dancing and dancing, the whirling waltzes and rollicking quadrilles being interspersed with old fashioned Celtic break downs, several of the participants in the latter showing a high degree of activity and proficiency, and there must have been employment for three or four shoemakers on the following day to repair the damage to their foot gear.

Superintendent Doogue, of the Department of Public Grounds, is entitled to especial commendation for his generosity to his employes in giving all who wished to attend the picnic leave of absence for the day without loss of pay. It goes without saying that he will lose nothing by it. The work will be done all the better, for the boys are not as a rule ungrateful and a liberal policy like this does much to insure good feeling between the superintendent and the men.

Nothing occurred to mar the pleasure of the occasion and everybody seemed well satisfied with their outing, all of which should be very gratifying to the committee which had been given charge of the arrangements.

The funeral of Mr. Bernard Norton, father of ex-President Norton, took place in Dorchester on July 17. Many of the business friends and associates of the Norton Bros. testified to their respect for the family by attending the services. The absence of the retail florists was noticeable. It was hardly creditable to them that at a time of the year when business can not be said to interfere they should fail to show this slight mark of fellow feeling towards their business associates of so many years, and it leads one to inquire whether there is not something in the retail business that is conducive to the development of selfishness. In contrast to the action of the retail people was the large number of gardeners present, one of them, Mr. Fred Harris, having come 17 miles to attend the funeral. Messrs. Bowditch & Long sent a handsome funeral design.

New York.

The old story, only worse. Trade in cut flowers is a reminiscence and a hope, that's all. Many of the dealers who can not bear to be idle are trying to make themselves and their friends believe they are busy by having their shops repainted and renovated generally while they themselves indulge in self-renovating with a game of checkers and a pitcher of pure ice water.

Sweet peas are coming in by the crate, but a man is wasting his time when he goes to pick sweet peas when they are wet. Two hours after they reach the city they are ready for the dump, and that is the fate of a large proportion of those sent in. Roses are bad. The hot weather has taken the life out of them. If good La France and Beauties could be obtained they might be sold, but good ones can not be found. Gladioluses are coming in freely, but will scarcely pay the freight. Still, when the grower is willing to prepay the freight, as is said to be the case, the receiver can not find much fault.

Charles Thorley has gone to Moosehead Lake for two weeks' fishing. After that he contemplates a trip to Russia.

Brower makes an attractive show of the wild Pitcher Plant—Sarracenia purpurea—which is much noticed for the oddity of its habit. Few people know what an excellent plant this is in a cool room, planted in sphagnum and kept standing in water. The plants vary greatly in coloring, some being plain green, while others are veined and shaded with deep bronzy red. Some of the florists make a large display of flowers for the season, but find their chief work now in funeral orders. Wreaths or flat bouquets lead for such work.

Thorley reports that he has a good many out of town orders now; his city work, like the rest, is chiefly for funeral orders.

There is an extensive display of bedding at Eldorado, the pleasure park at Weehawken. Among other work is the name "Eldorado" in mammoth script, worked in red and yellow alternantheras.

Samuel Henshaw has been making use of aquatic work largely in landscape gardening this summer. He is also engaged in literary work of a horticultural and reminiscent character.

Philadelphia.

The heat the past week has been almost unbearable; the thermometer has registered over 98°, and two or three days it reached from 102° to 106° in the shade. In greenhouses thermometers have been useless to register. At Heron & Nesbit's establishment in Hestonville the mercury has registered 135° (the limit) several times. They talk of getting a larger glass.

This intense heat makes everybody uncomfortable in the extreme, but we have not heard of any prostrations of members of the trade, although the papers are full of accounts of sunstroke and persons overcome by the heat.

Harry Bayersdorfer has returned home from his European trip and reports great success in securing novelties in the line of florists' supplies.

The Philadelphia Immortelle Design Co. has consolidated with Marschuetz & Company. The firm name will be Marschuetz & Company and the business will be conducted from the old stand, 23 and 25 North Fourth street. Mr. Joseph Marschuetz has just returned from a trip to Europe, where he has been purchasing new stock, and says he has secured quite a number of novelties. We wish the new firm success.

Mrs. LaRoche, mother of Mr. LaRoche, of LaRoche & Stahl, died July 23 at the home of her son, Collingdale, Delaware County.

One of the pleasant features of the trip to Washington will be a social time with the New York and Boston delegation, who will be met on their arrival at Broad Street Station and escorted to Horticultural Hall by members of the Florists' Club, where they will partake of an informal luncheon. They will arrive about 1 p.m., and their journey, with the addition of the Philadelphia brethren, will be continued at about 2:30.

This will undoubtedly be the best attended convention ever held by the society, if we are to judge by the number going from this neighborhood. It really seems as if there will hardly be enough left at home to do the watering.

Robert Craig returned from the fishing party at Barnegat Bay and reports the fishing very poor, although the boys are having a good time otherwise.

James Simms, landscape gardener, of Rosemont, invited a number of his friends in the trade to spend the day with him July 27. A good time was the result, and the party returned home about 8 p. m. very much pleased with their day's outing.

The bowling fraternity are very much exercised over the Washington contest. The first four places on the team seem to be filled very satisfactorily, but for the other two there are a number of claimants. We are confident, however, that everything will come out all right, and may the boys bring the cup back with them.

The "H. A. Dreer" B. B. Club defeated the "Brooks Underground" nine on their grounds at Riverton in a well played contest Saturday, July 23. The pitching of Wood was too much for the visitors, and they were unable to secure a single base hit. The score was 14 to 5. The Dreers will have another go with the Florists of this city Saturday, August 6. The game will be played on the Craig grounds, Forty-ninth and Market streets.

Mr. Thos. Foulds, of Gwynned, met with a great misfortune in the loss of his little daughter, 3 years old, by drowning. Intending to erect a new house, he had dug the stoke-hole, and then changing his mind he erected the house in another part of his place. The stoke-hole, being in rather a low spot, became full of water; it was not very deep and all the rubbish was being thrown in to help fill it up. Last Monday Mr. Foulds was doing some planting near this place and his little girl was playfully helping him. Not noticing her in a few minutes, he supposed she had gone into the house. Just then his wife called him in to get some refreshment, when not seeing the girl there he became alarmed. The greenhouses and then the stable were hastily searched, and not finding her the stoke-hole was dragged, and to their horror the body of the little one was brought up. She had fallen in while her papa's back was turned. Every effort was made to bring back the life, but it was too late; the little spirit had fled. Such scenes are heartrending, but surely there is a moral to this one.

K.

On Wednesday, July 27, a very enjoyable trip was taken by a number of gardeners and florists to historic Valley Forge, the guests of Mr. Charles Simm, landscape gardener of Rosemont, Pa.

At 8:45 a. m. train was taken at Broad Street Station for Rosemont, where we were met by Mr. Simm and his Tally-ho. The trip was through one of the most picturesque and delightful parts of this favored State. It was a thoroughly enjoyable time to all concerned. Mr. Simm's guests were George C. Watson (John Gardiner & Co.), D. D. L. Farson, George Anderson, Isaac Kennedy, Charles Colburn, Gordon Smirl, gardener to Joseph Sinnott, Esq., Edwin Lonsdale, John Nisbet, Richard Heron, Mr. Warner and some others. Messrs. Westcott, Craig and Harris were to have been of the party, but they went to Waretown trying to catch fish instead. Mr. Battles also was to have been with us, but business interfered. Everybody regretted David

Bearn's sad accident, which prevented his presence. He is, we are glad to learn, progressing as rapidly as possible toward recovery considering the nature of his injury, a broken wrist.

Many scientific subjects were discussed on the outward trip, fuel, etc. The qualities of different materials as conductors came up. With one accord everybody agreed that glass was one of the best of them.

The weather was warm, but it was a breezy and a merry party. The scintillations of wit which flashed from time to time added to the good feeling.

The arrival was made about noon, just in time to thoroughly enjoy the bounteous lunch generously provided by our host.

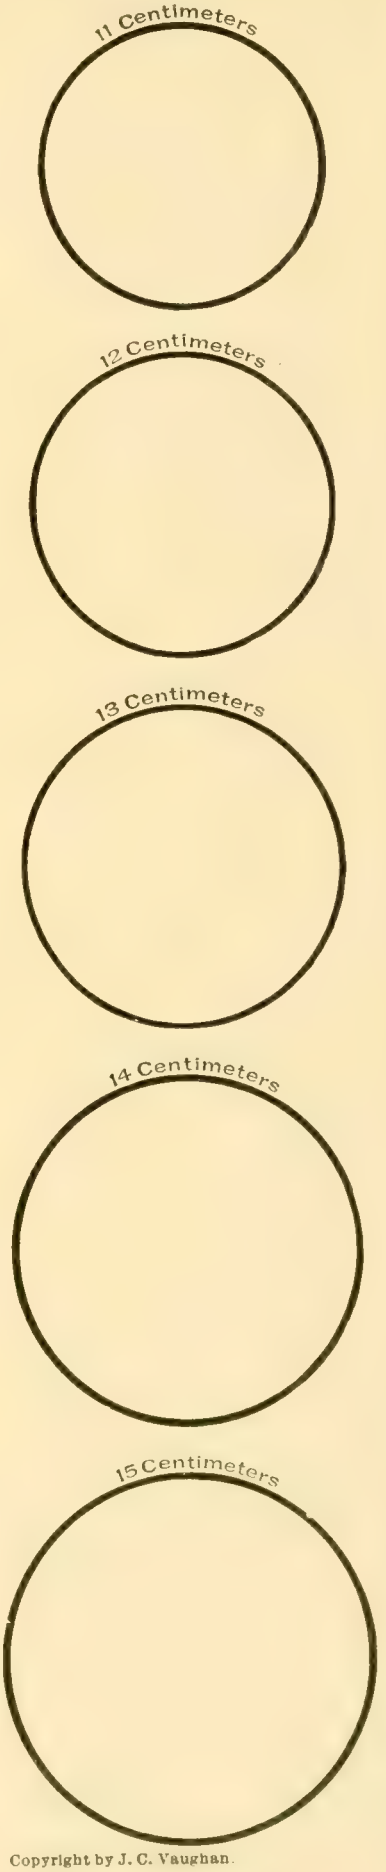
We sought a high and shady spot, where we lingered long admiring the magnificent scenery which was spread for miles and miles before us. Later in the day we strolled around taking in many points of interest, and botanizing a little, about this sacred ground where Washington and his patriotic followers suffered untold hardships in the dark days of 1777.

R. Lauterbach, a fellow-craftsman, was found in the vicinity busy building a new greenhouse. Work was for the time being suspended and Mr. L. conducted the party to a point of interest which had heretofore been overlooked. It had been used during the Revolution as a hospital.

The homeward trip was without especial incident other than the merry boys kept each and all in hilarious mood during the whole journey. Everybody voted and sang, "Charlie is a jolly good fellow," and will long hold in grateful remembrance the trip to Valley Forge.

L. F.

Sizes of Bulbs.



We present herewith five engravings of different diameters of bulbs, which will make plain to our readers the measurements adopted by the French growers. We believe they will be of some little value to our readers in verifying the sizes of bulbs received by them.

We are indebted to Mr. J. C. Vaughan, the Chicago seedsman, for the use of the engravings, which he has had copyrighted.

Washington.

The weather in Washington during the past week has been most uncomfortably hot, thermometer ranging from 96° to 104° in the shade. The florists' business is simply suspended. It has been too hot to push convention matters, though the various committees have been at work all the time. At the meeting held in Concordia Hall July 29 their reports were very satisfactory and the meeting was fairly well attended, notwithstanding the heat was more oppressive than any evening during the week.

The bowling committee seems to be doing more than any of them; Capt. Freeman reported July 29 that Mr. Jerome Desio, the well known manufacturing jeweler of 1223 Pennsylvania avenue N. W., had presented the bowling club with a handsome cup valued at $50 for the Washington 2nd prize, and that Mr. J. J. Forsythe, the artist of 1208 F street N. W., had presented the club with a beautiful etching to be handsomely framed by Mr. Forsythe, this to be the 3rd Washington prize. The committee are not satisfied with this, but propose trying to secure several individual prizes. The two cups and the etching are to be the property of the club winning them.

Copyright by J. C. Vaughan.

SIZES OF BULBS.

The committees on exhibition, entertainment, decoration and reception all made very good reports. Mr. Freeman is busy securing hotel accommodations for clubs and individuals who intend coming to the convention. Everything points to a large attendance and we trust there will be, and that this may be the largest convention in the history of the S. A. F.

Messrs. C. Strauss & Co. (through Mr. Benj. Durfee, Chairman Executive Committee National Gardeners' Club) in conjunction with the Herendeen Manufacturing Company has arranged for a free carriage ride to the greenhouses of the former on Tuesday after 12 o'clock. A luncheon will be served at the place. This will be exclusively for members of the S. A. F. Messrs. C. Strauss & Co. have 150,000 feet of glass, mostly devoted to rose growing. They have just finished their rose planting for this season, having been at it for several weeks past. They have about 100,000 fine healthy plants now in the ground. Perles seem to be their main stay. Of these there are about 20,000, Brides 15,000, Mme. Pierre Guillot 10,000, White La France 8,000, Gontiers 3,000, Mermets 3,000, and the others are La France, Woottons and American Beauties. They have about 5,000 new European varieties, all looking remarkably well. They have five houses in which they intend planting 30,000 carnations this fall.

Mr. Adolphus Gude, of the firm of Gude Bros. on F street, has the sympathy of the florists of Washington in the loss of his infant son who died July 29.

The bowling clubs intending entering the contest for the cups and other prizes should notify Capt. J. R. Freeman at 612 13th street N. W. at once, that ample arrangements may be made for their comfort and convenience. This is of the greatest importance.

C. LESLIE REYNOLDS.

Baltimore.

The temperature Monday night at the club meeting was an indication of what was coming. It was really too hot for any one, fat or lean, to enjoy talking about firing or fuel, or listening to another on the same subject, and yet that is just what the meeting was held for, Mr. Vogel having promised to explain his method of using coal dust and clay to the club.

He began by correcting a printed report of his fire, which stated that a layer of material 6 inches thick would carry steam enough to heat 4,600 feet of glass 40 hours, whereas he only claimed that a layer 12 inches thick would heat the houses 18 hours, or from 3 p. m. until 9 a. m. the next day.

He is very enthusiastic over the merits of his plan and said his coal bill had been reduced from $85 to $35 per annum since adopting it. He cautioned all who wished to try the plan to carefully observe the following points:

First. Have the space between top of grate bars and bottom of boiler twice the thickness of the layer of fuel required. He uses a layer of 12 inches himself and has a space between grate and boiler of 24 inches.

Second. Build a fire of wood or shavings, completely covering the grate evenly all over, scattering over it evenly enough pea coal to make a slight fire after the wood has burned away. He uses shavings from car works.

Third. After the wood has burned away cover the whole fire with a uniform coat of the coal dust and clay of a thickness proportionate to the length of time the fire is needed. Beating down very lightly to give the mass consistency enough to admit of being perforated.

Fourth. Perforate the layer of fuel from top quite down to the grate bars with holes ½ inch in diameter, perfectly vertical and as near 3 inches apart each way as possible.

The dust and clay must be thoroughly mixed in the following proportions: 8 parts of coal dust to 1 part of clay and water about the consistency of cream. If mixed in greater quantity than needed at once care must be taken to keep at about the same state of dampness as when first mixed. If too wet it will put out the fire, if too dry it can not be perforated with holes that will remain, and this is the whole art of the process, the clay and water in small quantity giving the coal dust tenacity enough to keep the holes and permit draft.

In order to effect the perforations Mr. Vogel uses a piece of wrought pipe long enough to reach easily the farthest corner of his furnace; to the end of it he has attached by an ordinary quarter bend another piece of pipe 12 inches long.

The chief objection to the scheme, "That nothing could be done to keep the fire going if so desired on account of severe weather," he answered by saying that his plan had been to clear out the clinker immediately after the fire has burnt out and build a small fire of pea coal to keep up heat until time for putting on the regular fire for the night.

He has tried the plan 6 or 7 years and has also tried city gas, gasoline and other things, but abandoned all for this. Bituminous coal will not do as it can not be prevented from running together and stopping the draft.

Has one furnace and boiler for all his glass, the grate surface 24x22 inches, smoke stack 21 feet high, connected with furnace by a flue 25 feet long.

Mr. Ekas suggested that if all florists were to begin using dust the price might soon be as great as No. 1 coal, but Mr. Vogel thought not as the companies would be glad to get rid of the immense accumulations of dust around the pits at any price.

Mr. V. also advised that those who did not care to try his plan in toto, try using thin layers of screenings over bright fires of lump coal, not putting enough on to choke the draft.

The thanks of the club were voted Mr. Vogel for his paper.

After a little chat among the members over the plan, in which several were heard to promise it a trial next winter, the regular business of the club was taken up and two new members elected.

Then a letter was read from our absent secretary, written while passing through the English channel. The first land he had seen after leaving America had a well kept garden and three greenhouses on it, so he did not feel as much of a stranger as he had expected to when he took the glass for a look at the distant shore. He expected to arrive in Bremen July 5.

Pres. Fraser called the attention of the club to the proceedings of certain so-called florists who visit houses where a death has occurred and solicit orders for flowers and designs, at the same time reading the address on a card left by such a person at the house of an acquaintance of his. The members were very indignant, as this practice is calculated to bring the whole funeral trade into contempt, and passed a resolution expressing their disgust at both the plan and parties who prosecuted it.

The governor and mayor and the following gentlemen having been elected honorary members replied in very complimentary terms and their letters were read: Messrs. J. C. Vaughan, E. F. Abel, Geo. W. Abel, T. J. Wentworth, Chas. H. Grestie, F. Raine, Jas. R. Pitcher, A. Beckhoffer, Felix Agnus, T. H. Spaulding. Adjourned.

Business is still very dull. The temperature having been from 98° to 102° every day this week no one stays in town that can possibly get away.

Sam'l Feast & Sons are putting up two new rose houses 100x22 feet each and a chrysanthemum house 50x18.

R. Patterson had the roof burned off the store on Madison street. Damage slight. MACK.

Buffalo.

There is little to add to my last notes about the hail storm. It was local in extent, covering an area of about four square miles. Scott was the only one that had hail insurance, but now several have come to the conclusion that hail insurance is a good thing. We can all be thankful it was no worse, for outside of broken glass little harm was done to stock. When we hear of the poor florists of Bradford, Pa., we realize how cheaply we got off. Some Bradford man may send particulars of their terrible visitation, but my knowledge of the losses is as follows: Mr. Rockwell, both at his city greenhouse and his growing establishment about one mile out, had not a piece of glass left larger than a clam shell. And the heavy double thick glass falling down together with the hail utterly destroyed all his stock. Mr. Graham, the rose grower, suffered about the same. He says he counted 40 lights left whole out of 4,000 feet of glass and two houses of young roses were entirely destroyed. The Marilla gardens (Miles & Howe, proprietors) were not hit quite so bad, being at the tail end of the storm.

But little trifles like hail storms don't stop the sportive nature of the Buffalo florists from asserting itself when occasion offers, and so the annual base ball game, West Side vs. East Side, was played on Saturday, the 23d, at the Park Meadow. It would not be of general interest enough to give a detailed account of the game. Suffice it to say the East Side won, although it was anybody's game till the last half of the ninth inning. There was a refreshment tent and when the game was started the tent was full of all that is conducive to make players happy. At 7 p. m. when game was called there was little left but canvas. We expected Mr. Walter Mott to arrive from Toronto in time to umpire the game, but he failed and so an East Sider officiated in that enviable position. It is needless to say all close decisions were given to the East Side. The only grievance the West Side has is that the other side put in a semi-professional battery, but even with that they had a close squeak. Their catcher was Louis H. Neubeck, the same who caught in that famous game of Buffalo vs. U. S. in 1889 in Buffalo, when the entire continent (of florists) had to take a back seat. Such old chaps as J. F. Cowell, E. I. Mepsted, Edw. Buxton and "G. S." played and did brilliantly. D. B. Long and C. F. Christensen were there; the former kept score and the latter made several beautiful plays (inside the tent). J. H. Rebstock played in center field and nothing escaped him, while Mr. Laurence in right field was a grand example to young men who aspire to play the national game. To conclude, the West Side had the brains, experience and good nature, while the East Side had the aggressiveness and bluff.

We are soon to have another wholesale grower in our vicinity. Mr. H. J. Wise, late of New Jersey, has bought land in the beautiful village of East Aurora, about 18 miles from Buffalo, and is erecting two houses in the most approved style, destined to grow roses for the Buffalo market. As Mr. Wise is a gardener of long experience, there is little doubt about his success.

Mr. J. I. Cowell, who has charge of the horticultural department of our big exposition here in August, has gone east to look up exhibitors for the same. The prizes are liberal and there should be an excellent show.

Your correspondent was in attendance at the Toronto flower show last week and bears testimony to the excellence of the display of palms, ferns, caladiums, etc., and thinks that few towns, if any, of Toronto's size in the United States could make such a show. But at the same time the "rooster" who is crowing about such a show not being equalled in this country is getting far out of his depth. Perhaps he has never heard of Boston, Philadelphia or New York, besides several other villages. However, talk is cheap. The best way is to get up an international show with prizes that will pay exhibitors to send their plants to some city that is most convenient to the people of both sides of the great lakes. There is a company here running a big international fair and size of premiums would be no object if it would produce the best displays of the continent. I trust it can be done, and let us take the conceit out of the Canucks and their spokesman, "E."

Mr. and Mrs. W. J. Palmer, Jr., are rejoicing over the arrival of an 8-pound son, born July 29, and which they have named William Mark Palmer. G. S.

St. Louis.

Trade about the same as last week.

Temperature is getting down to about the normal and we are beginning to live again.

The lotus ponds in the Botanical Garden and parks have been very fine this season. "How beautiful!" "Grand!" "Perfectly lovely!" are the remarks constantly heard about the ponds.

The lotus is perfectly at home here. The only difficulty with it seems to be the attacks of the nelumbium moth (Botis nelumbialis, Smith), which often ruins the appearance of the plant for the entire season, besides leaving the plants weak for the next year.

The eggs are probably laid on the leaves, although I have not yet had the good fortune to see them. The larva when first hatched draws over a portion of the edge of the leaf and binds it down with fine silk, making for itself a snug home where it is out of sight of enemies. It eats about the edge of the leaf and also eats holes through the leaves from the upper surface. As it gets larger it bores into the leaf stalk, usually penetrating it from the center of the leaf on the upper surface. Sometimes, however, it commences its burrow at the side of the stalk from the underside of the leaf. It comes out of this burrow to feed on the surface of the leaf. When the larva is full fed it spins a silken cocoon in the

burrow, covers over the opening of the burrow with a neat closely-woven silk covering and changes to a pupa, from which it soon emerges a small beautiful brown moth. There are at least two broods here.

Mr. Smith describes and figures this insect in *Garden and Forest*, Feb. 19, 1890. The only comfort he gives the lotus lover is the remark: "Unfortunately the insect seems to be increasing and bids fair to render lotus growing unsatisfactory."

It being a part of your correspondent's duty to study and destroy the insect pests at the Missouri Botanical Garden, he has come in personal contact with this lotus destroyer. Various insecticides were tried. Paris green and kerosene emulsion were worse than the insects; insecticides in solution would not remain on the foliage; powdered white hellebore dusted on with hand bellows killed the larvæ and did not damage the plants. The hellebore should be applied after every rain, as the rain washes off all that may have been previously applied.

Our nelumbiums, both in the garden and park, have been vigorous and free from the worms since we began the use of this powder.

Hellebore, one ounce to three gallons of water, will destroy rose slugs, currant slugs, gooseberry slugs, and in fact, any of the slugs. It will also kill the cabbage and cauliflower worms and is perfectly safe to use. It would probably destroy the slug that is so troublesome in greenhouses, although this pest belongs to an entirely different class than those mentioned above, which are all true insects.

J. C. DUFFEY.

Chicago.

Business is still too dead to be worth mentioning.

The weather has turned much cooler, and life is worth living again.

Quite a number of florists in the West and Northwest have signified their intention of traveling with the Chicago party to Washington. The train selected will leave here over the Pennsylvania Railroad at 3 p. m. Sunday, August 14, reaching Pittsburg at 8 o'clock the next morning. The Pittsburg party will join us there. Washington will be reached Monday evening. The tickets secured have a very satisfactory limit as well as being placed at a low rate, and any one wanting to visit other cities in the East after the close of the convention will have abundant time to do so without losing the reduced rate on his return ticket.

Among recent visitors to the city were Mr. Antoine Wintzer, of the Dingee & Conard Co., West Grove, Pa., and Mr. W. Bertermann, Indianapolis. Mr. Wintzer was much pleased with the progress made in the Horticultural Department of the World's Fair. He is now getting 5,000 tea roses into shape for displaying in Uncle John's department next year.

REPLYING to the several inquiries regarding Messrs. Wilson Bros., of Springfield, O., this firm does not seem to give proper attention to its correspondence or orders. In view of the complaints that have reached this office, and regarding which we failed to get any reply from the concern named, we regret to say that we can not recommend this firm to the trade.

LAST CALL for advs. in the convention supplement. Noon of August 8 is the last date at which they can be received and be sure of insertion.

The Nursery Trade.

AMERICAN ASSOCIATION OF NURSERYMEN.

H. AUGUSTINE, Normal, Ill., president; Z. K. JEWETT, Sparta, Wis., vice-president; CHAS. A. GREEN, Rochester, N. Y., secretary; N. A WHITNEY, Franklin Grove, Ill., treasurer. The Eighteenth annual meeting at Chicago, June, 1893.

Notes From Rochester.

BY. WM. FALCONER

Ellwanger & Barry's nurseries are on the outskirts of the city; the electric cars go past their door. They own 650 acres of land in and about Rochester and cultivate 550 acres in nursery stock. They also hire a deal of land of the farmers some miles out of town for growing fruit trees, for a rotation of crops is as beneficial in the tree line as in agricultural crops and the best quality stock can be grown only by resting the land with some other crops. In the case of these hired lands the firm always attends to the cultivation of the stock, for no matter how careful the farmer might be, he would be apt to skin a good many trees with his whiffle-tree in cultivating between the rows. Then there are always a few things to see to, as labels, insects, pruning, suckering and the like.

The main nurseries about the offices consist of the greenhouses, trial grounds, herbaceous plant department, specimens of ornamental trees, orchards of stock fruit trees and the residences of the firm. But the city is now encroaching upon them and to reap the advantage of its inroad they are grading the side of their lands next to the city, laying it out in streets and building houses upon it. Years ago they were alive to this order of things and in planting specimen trees—beeches for instance—upon their grounds, so arranged it that these trees would come into the yards of the houses on the new streets and be preserved. Their grove of Sequoia gigantea is now on the verge of these improvements. Let us hope they never will be interfered with. They consist of nine trees near together, straight as an arrow, and about seven feet in circumference of stem. I tried to clasp one of them with my arms, but couldn't. They are the finest lot of these trees that I know of east of the Rocky Mountains.

The first tree of the fern-leaved weeping birch that came to America is still growing in this nursery.

Magnolia macrophylla grows splendidly there; so, too, do the other early flowering deciduous sorts.

Weir's cut-leaved weeping maple is much appreciated, and so it ought to be, for it is one of the handsomest trees in the world, even if it is a soft maple.

The golden oak (Quercus concordia) is valued as the best of yellow-leaved trees.

Mountain ash and ornamental thorns (cratægus) do well, but I noticed that the mountain ash is entirely bare of fruit this season. Is this general?

Horse chestnuts do famously everywhere about there, even as city trees.

Their variety of shrubbery seemed about as extensive as we have on Long Island, notwithstanding their more northern and inland situation.

But the Rochester soil is fine for trees, especially young stock. It is stiff, loamy, with sand on a stiffer bottom. This induces good fibrous surface root action and discourages deep or tap-rooting growth.

A peculiarity of these nurseries is the absence of big unsalable stock; nothing of that sort is allowed to cumber the ground. What stock isn't sold in due season is grubbed up and burned. The ground has got to be filled full with a paying crop, for it has got to be cultivated and kept clean anyway.

They rest their lands with crops of hay, grain or corn, and when I was there they were plowing under a heavy crop of timothy and clover for fertilizing purposes. One man went ahead of the plow to lay the hay over so that the plow could cover it better.

Of fruit trees not only do they grow an enormous young stock, but their experimental orchards are unsurpassed in the state. Every variety is grown. And what fine fruit they raise there! Mr. Barry told me that Anjou pears were one of the best paying crops they handled. They also have large vineyards and for comparison's sake grow every variety of hardy grape that ever was sent out.

Besides being sagacious and exceedingly successful business men, they are among the most public spirited citizens of the Flour City. They have presented 25 acres of their nursery grounds to the city for park purposes and also have agreed to let the commissioners have all the trees and shrubs they need, so far as they are in stock in the nurseries, gratis for the city arboretum.

Public parks, however, are something new to the city of Rochester, but the people don't seem to appreciate them; they are continually grumbling about the taxation the parks involve. Poor folks! Can't Boston or Chicago spare them a little enthusiasm? It has four new parks now under way, and instead of growling, it is rejoicing the people should be to secure them. A love for their parks will grow on them, however, for on Sunday afternoon when I visited South Park, Highland Park and Genesee Park the people were there in multitudes, well dressed, well behaved and happy. Ten years from now your parks will be your pride, and let us hope, your stinginess your shame.

A clergyman on the board of park commissioners is something unusual, but there we have one in the person of the Rt. Rev. B. J. McQuaid, Bishop of Rochester, and his appointment was a lucky job for the city. He wants parks and he wants them properly supported, and he has energy, sagacity and the courage of his convictions.

Highland Park is to be the arboretum of the city of Rochester, and now its nursery rows are being filled with all manner of trees and shrubs—the contents of catalogues north and south, in Germany, France and England. In my opinion, however, it is none too large for a proper representation of species and natural varieties, let alone the inflated lists of garden varietal names of foreign nurseries.

A Lawson cypress, seven to eight feet high, and in good health in a clump among other trees in Holy Sepulchre Cemetery rather surprised me. It isn't often we find a Lawson as far north as that.

A fine morinda spruce (Picea morinda) on a high bank by the roadside in Mount Hope Cemetery was a still greater surprise. But then I remembered that years ago Ellwanger & Barry had a hardy form of this Himalayan evergreen and it was largely propagated and distributed. On inquiry I found that this individual was one of the descendants of E. & B.'s hardy form.

No mosquitos! Now comes one of the most delightful experiences of my visit to Rochester. I was the guest of Bishop

McQuaid at his country home at Hemlock Lake, about 40 miles from the city. He has a farm of 215 acres there on the steep, east-facing slope of a high rocky hill on the Livingston County side of the lake, and there for a whole night and a whole day I neither saw, heard nor felt a mosquito or gnat! Coming from Long Island, don't you think I was lonely?

The bishop has 60 acres in vineyard and makes grape growing and wine making a specialty. The wine is absolutely pure; in its manufacture neither sugar, water nor any other substance is added; it is the pure and unadulterated juice of the grape and is sold and used for church purposes and the revenue derived from it goes to the support of the Theological Seminary at Rochester.

For wine making he uses about a dozen varieties of grapes in quantity and about twenty more experimentally. Those most preferred are Concord, Salem, Delaware, Brighton, Elvira, Hartford, Champion, Worden, Agawan, Stace's seedling and Iona. Niagara as a wine grape is disappointing, Catawba doesn't ripen always, Clinton is unsatisfactory, and so on.

News Notes.

MR. H. BAYERSDORFER, of Philadelphia, arrived home from his European trip July 21.

NEVADA, MO.—C. W. Talbot has added two substantial rose houses 20x75 and will soon have completed a chrysanthemum house 12x75.

SHORT HILLS, N. J.—Ernst Hemming, in the employ of Pitcher & Manda, being a sufferer from hemorrhage of the lungs, was on July 19 presented with a purse of $50, by the employes of the above firm, to enable him to go to Colorado.

ALLEGHENY, PA.—T. F. Beckert and brother (A. J.) have purchased 25 acres on Neville Island in the Ohio River, nine miles below Pittsburg. They have in course of erection 10 houses, containing 30,000 square feet of glass, mainly 16x24. Walls and piers of brick. The style and P. O. address of firm will be Beckert Bros., Glenfield, Pa.

NEW ORLEANS.—The New Orleans Horticultural Society held its annual meeting July 21, and elected the following officers for the ensuing year: C. W. Eichling, president; J. H. Menard, vice-president; Chas. Wise, Secretary; John Eblen, treasurer. It was decided to hold a grand floral exhibition in the spring of 1893. The date was left for future determination. After the meeting the members of the society repaired to the Vonderbank Restaurant, where a tempting banquet was partaken of and addresses delivered by the officers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By an experienced florist as second man on inside work. Skilled designer. Best references. Address O E, care Am. Florist.

SITUATION WANTED—By an experienced and reliable western florist to handle commercial place. If not successful, will expect no salary. N E N, care Am. Florist, Chicago.

SITUATION WANTED—A well known florist will recommend a young man; 10 years' experience; age 24. Competent to take charge of private or commercial place. Address G, care Box 178, Sharon, Pa.

SITUATION WANTED—As rose grower and general assortment of bedding plants and cut flowers on commercial place. Chicago preferred. Would run a place on shares. Address P. O. Box H, Newtonville, Mass.

SITUATION WANTED—By a married man as foreman in a commercial or private place; 20 years' experience; understands the business in all its branches. Good references as to experience, etc. Address W. 522 Pine St., Scranton, Pa.

WANTED—A boiler in good condition, to heat about 3,000 ft. of glass. Address KRIEGER & CO., Mt. Sterling, Ky.

WANTED—A well experienced lady florist. Apply to ART FLORAL CO., 3911 Cottage Grove Ave., Chicago.

WANTED—To buy from 3,000 to 6,000 feet second-hand, 9 ft. Hitchings soil pipe. AUG. BURMEISTER & CO., Box 4, Bay View Station, Milwaukee, Wis.

WANTED—To rent a florist place in New York or vicinity with at least 5 or 6 greenhouses. Furnaces and water pipes must be in good order. State price. W. ECCLES, care L. D. Ripley, Esq., Hempsted, Long Island, N. Y.

WANTED—A man to take charge of a commercial plant of 14 greenhouses, to grow mostly cut roses and small rose plants. Prefer married man. Must have good references; others need not apply. Address LAROCHE & STAHL, 1237 Chestnut St., Philadelphia, Pa.

FOR SALE CHEAP—Hitchings boiler No. 16 and 1000 feet 4-inch pipe. Only been in use 6 months; good as new. Address B. REDFIELD, 141 Dock St., Philadelphia, Pa.

FOR RENT—One of the best paying florist stands in Philadelphia; store, hothouse and dwelling; established 23 years. In consequence of ill health owner is compelled to retire. Will be rented low to a responsible party. Address R. C. SNYDER, 727 Walnut St., Philadelphia.

FOR SALE—FLORIST'S WAGON, covered front and back, lined and padded, 7 ft. 6 in long, 6 springs, heavy wheels (2-inch tires), Cannon Bros., mf'gs., but slightly used, cost $300, will sell cheap. Full particulars on application. WM. QUIBELL, 5th and Erie Sts., Phila., Pa.

FOR SALE—A Devine hot water boiler, will heat 2,000 feet of 4-inch pipe; 1,500 ft 4-inch pipes and fittings; 1,800 ft. 8x10 glass (single thick); 1,200 ft. 7x9 glass; 66 sashes 8x10 28 lights. Will sell the above for $250. The boiler and pipes are comparatively new. T. D. RIMMER, 2714 Fifth Ave., Chicago.

FOR SALE OR RENT—Rose growing plant containing 25,000 square feet of glass, with property, situated 25 miles from New York City. Stock and houses in A 1 condition. Houses all planted; mostly American Beauty and La France. Will sell on easy terms. Address ROSE GROWER, care Am. Florist.

SPECIALTY FLORIST BUSINESS FOR SALE.

I offer my business of rooted cuttings, stock, greenhouses, etc., at a fair price. The greenhouses to be moved from present location. Correspondence solicited.

S. B. FIELD, Roselle, N J.

FOR SALE.

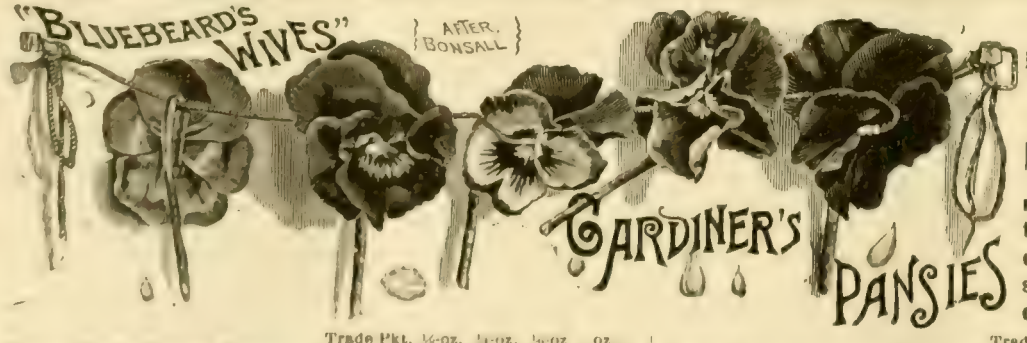
A No. 1 improved good business stand in the city of Nashville, Tenn., 75,000 inhabitants. 10 city building lots or about 1½ acres of the best land, thereon is a dwelling of 8 rooms and an L cornered porch, well shaded with trees and vines, six greenhouses, five heated by steam and one by flue two wells with windmills, good many sashes and cold frames, stock rather small, of about $500, consisting of roses, bedding plants and hardy shrubs and grasses. This property I will sell very low, at near one half value, as I can't stand greenhouse work any longer. Terms one half cash, balance in one or two years time. Also I have about 20,000 violet plants and clumps, ready now. Prices given on application.

M. TRITSCHLER,
NASHVILLE, TENN.

FOR RENT.

Twenty greenhouses, all heated by steam, in a large western city; well located for business, being within one block of principal cable line and doing a business of $15,000 to $20,000 a year. The place is well known and does a large shipping business in adjoining states. One half of the houses are at present devoted to cut flowers, balance to plants. Stock, tools, wagons, horses, etc to be bought by the one leasing the place. This is a good opportunity for anyone who has the capital to run a place of this size. And I will rent the place low as other business in which I have engaged occupies my entire time.

Do not answer this unless you mean business and have the capital which a place of this size demands. Address



BOX 50, care Am. Florist, Chicago.

RESERVOIR ROSE GARDENS FOR SALE.

The most complete florist's plant that can be built. Six houses 100x20 feet, heated by steam, large work room, office, dwelling, stables, etc., 3½ acres of land. Convenient to electric cars. The houses are filled with roses for forcing next winter, and also a miscellaneous class usual in a florist's establishment. Thousands of roses are growing out. It is desired to sell the growing plants and improvements and lease the ground, but will sell the ground if desired.

Terms cash, or if satisfactory security is given, the purchaser may make his own terms.

Address **MRS. ANN E. GRANT,**
400 E. Franklin, RICHMOND, VA.

Honor to Whom Honor Is Due.

A writer in a recent number of *Garden and Forest* gives a most charming description of the beauties of the Italian Garden at Wellesley, and pays a high tribute to Mr. Hunnewell's enterprise and taste in laying out and maintaining this most renowned of all American places.

But we look in vain for one word of recognition or commendation for the man who has been Mr. Hunnewell's trusty lieutenant all these years, whose skill has planned and whose hand has accomplished this wonderful transformation of a sandy desert into such a paradise.

It is generally understood that at the beginning of his career Mr. Harris did not find Mr. Hunnewell in full accord with him as to the wisdom of the construction of this topiary garden, and it was only after much consultation and interchange of ideas that the plans proposed by Mr. Harris were finally acted upon.

But Mr. Hunnewell himself is not the kind of a man to withhold from Mr. Harris his full measure of recognition, or to forget how much of the conception and carrying out of this great work is due to his ability.

Incidentally we recall having seen whole columns written in description of the famous Arnold Arboretum where not once does the name of Jackson Dawson appear.

The regularity with which this tendency to ignore the workers appears in the contributions of a certain class of writers forces upon one the conviction that it is not wholly unintentional. Assuming this to be correct, it is hard to rid one's self of a feeling of contempt for minds so narrow.

QUITE A NUMBER of those who have sent us photographs for the convention supplement have asked us to book their orders for specified numbers of extra copies. As we shall print only enough extra copies to fill orders booked before we go to press, if there are others who wish extra copies they should send in their orders to reach us not later than August 9. On orders received by that date we can supply any quantity desired at the rate of 5 cents per copy.

IN OUR REPORT under the head of Worcester, Mass., in our issue of July 2, Mr. A. A. Hixon was named as the secretary of the Worcester Co. Hort. Society. Mr. Hixon calls our attention to the error and reminds us that Mr. Edward Winslow Lincoln is secretary and has held that position for many years.

AUGUST 1 was the last date at which we could use photographs in the convention supplement. If yours was not mailed to reach us by that date don't be disappointed if it was not used. We set the last date as late as was possible and still allow time for the work of engraving.

DO YOU WANT an alphabetical list of carnations in commerce in America with date of introduction and a brief, accurate description of each one, with synonyms noted? You will find such a list in our new trade directory and reference book.

THIS IS LAST CALL for advs. in our convention supplement. They must be received by noon Monday, August 8, at the very latest.

DO YOU WANT a list of the leading cemetery superintendents? You will find such a list in our new trade directory and reference book.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our new trade directory and reference book.

IF YOU HAVE anything to sell to florists you will make a mistake if you do not advertise it in our convention supplement.

COALDUST FOR FUEL.—Note something further about this matter in the Baltimore letter in this issue.

BRADFORD, PA.—A terrific hail storm did much damage to greenhouses here July 22. Nearly all the greenhouses in the city were literally riddled, and in most cases there was also a heavy loss in plants. W. C. Rockwell's loss will amount to about $3,000. The damage to the Marrilla Gardens is estimated at $2,000, and that of Mrs. S. E. Cameron at $1,500. George L. Graham's loss will also foot up to $1,500. The greenhouses on the Cross estate were seriously damaged, as were also numerous private conservatories. Taken altogether the storm will not soon be forgotten by owners of greenhouses in this city.

WINNIPEG, MANITOBA.—The Manitoba Industrial Agricultural Exposition opened July 25 with a very fine display in the floral department. The interest in this department is increasing annually, and it has come to be a very important feature of the exposition.

WASHINGTON CONVENTION.

Headquarters Florists' Protective Association,
EBBITT HOUSE, 14 h and F Streets, N. W.

The *Fourth Annual Meeting* of the Florists' Protective Association will be held in the *National Rifles' Armory, Washington, D. C.*, from *3:30 to 5 p. m.*, THURSDAY, AUGUST 18th, 1892. Owing to the limited time at our disposal all members are urged to be on time, and to come "brim full" of new ideas and enthusiasm. The management will have some new matters to present, which they think will add to the value and efficiency of the service. Do not fail to attend this meeting. H. B. BEATTY, Sec'y.

The Secretary's rooms are ——, Ebbitt House, where he will be pleased to have you call. The "latch string is always out." Come in and register, leaving any message desired if secretary is absent.

NOTICE OF MEETING

— OF THE —

Florists' International Telegraph-Delivery Association.

The Forcing Bulb Industry.

The able article on the "Forcing Bulb Industry" by August Rolker, Esq., on page 1,134, deserves more than a passing notice. There is no reason why we should not grow *all* the bulbs we use, as in some parts of our country we have soil and climate adapted to every species under cultivation. The gladiolus, tuberose, and some species of lilies, all of which were imported thirty years ago, find such a congenial home here that we not only do not import, but have so turned the tables that we are now exporting annually more than we ever imported. What has been done with the bulbs mentioned may as well be done with the Roman hyacinth and narcissus in variety that are now brought from France in such enormous quantities.

This assertion is not a theory, but simply a statement of what has been done. Let us state the matter more in detail. Some four years ago the writer was asked, "What shall we do with some fifty thousand Roman hyacinths that have been delayed in transit so long that they have made such roots in the cases that they are simply packed together like a cake?" We examined the mats, and they could hardly be called bulbs so thoroughly were they matted together, and replied, "Send them to North Carolina." And they were sent to that section known as the "Thermal Belt," which is a high elevation where there is rarely more than six degrees of frost and no extreme heat. The bulbs were planted by inexperienced hands, under the most discouraging circumstances, as they were so much grown as to appear worthless, and at least two months too late for good results. Notwithstanding all these unfavorable conditions, the bulbs made a good root growth in autumn, and in spring flowered profusely, and then ripened their bulbs in the most satisfactory manner. When ripe they were taken up and dried as best they could be without suitable buildings—in fact they were dried under the shade of trees—and returned to New York. Much to our surprise, after properly cleaning, they were, to all appearances, fully as good as the best we had from France. These bulbs were sold to the most critical trade, and pronounced the best ever grown.

At the same time a large number of bulbs of the Lilium candidum, that had met the same misfortune, were sent, and these grew equally well, making splendid bulbs.

The soil in the section referred to is almost precisely the same as that in Holland, where the growing of bulbs is the leading industry, while the climate is decidedly more favorable to the growth of bulbs. Besides that, a single acre of "good bulb soil" in Holland would cost as much as one hundred acres in North Carolina.

Here, too, lilies of all denominations would find a congenial home; they grow vigorously, increase rapidly, make strong healthy bulbs, because they are entirely free from that blight that makes such sad havoc with bulbs at the North. All that is required to make this industry a profitable one in North Carolina is willing hands guided by experienced heads. Let such undertake the enterprise with a spirit that knows no failure and success is assured.

We need not speak of tulip culture as Mr. Rolker has stated that very plainly and correctly. But we will say a word in favor of what are generally known as "Dutch bulbs," which include hyacinths, crocus, narcissus, etc. These can and should all be grown in our own country; there is but one thing to prevent, viz., skilled labor; not in the cultivation—that is, in the labor of cultivation, but in the knowledge of their cultivation. This is not transferable, and can only be gained by years of watchful care, close observation and patient industry. Should any of the successful Dutch growers remove their plant to this country and give the industry the same attention they do at home they would benefit our country and at the same time produce the bulbs at less than one-half the present cost.

It may be asked why do not our florists undertake this work, a question we have already answered. We have not the knowledge necessary to carry on the enterprise successfully. Besides that, our florists lack the patience that must be shown, when we consider it takes from three to six years to produce the first quality of hyacinths. Other bulbs can be produced more rapidly, and with less skill. This is particularly true of Roman hyacinths and the many varieties of narcissus grown in France. They are as easily grown as the gladiolus and the tuberose and there is no branch of floriculture that can be so easily and profitably conducted as the growing of many classes of bulbs—which are now wholly imported—in this country.

C. L. ALLEN.

The article under the above head, on page 1,134, is valuable because so true. There is certainly a great future for American grown bulbs. Speaking of tulips, I have tried the American tulip alongside of the imported one, and the home grown bulbs always bloom stronger and better. These same bulbs have been grown here for forty years, are as good as ever, and still among the best. E. ARNOLD.

Grand Rapids, Mich.

MR. F. C. HUNTINGTON, of Indianapolis, will return from Europe about August 1. His many friends will regret to hear that his health is not improved.

Clean and round, heavy and sound,
In every bulb a flower.

GARDINER'S BULBS.

"Clean and Round, Heavy and Sound, In every bulb a flower."

That old world rhyme expresses exactly the qualities which have made

GARDINER'S BULBS

popular from one end of the country to the other. Our customers sit at the first table and pay no more than those who depend on the inexperienced caterers. Before taking your vacation make sure you have all arrangements made for Fall and Winter stock in case business may feel like taking a vacation also; but at the wrong season. Look over the special Price List we sent you and send us your order. If list mislaid send for another.

F. W. O. SCHMITZ & CO.,
60 Barclay Street, NEW YORK CITY

Toronto.

Owing to the extreme heat and a feeling of lassitude superinduced by listening to some of Great Scott's stories during his late visit to this city the writer has felt quite unequal to visiting any of the horticultural establishments this week.

The club held a sweltering meeting on the 26th inst., and the members turned up in unexpected numbers. Convention matters took up considerable time. Mr. J. H. Dunlop had taken considerable trouble to obtain the rates of the different routes to Washington and was well posted up on all matters in connection therewith. It was finally decided that as the delegation would not amount to twenty it would be better to join in with Buffalo on the invitation of Mr. W. Scott. So Toronto and Buffalo will travel in one car, and the lion and the eagle will lie down together (or I suppose the eagle will roost on the top berths and protect the slumbering lion beneath).

Mr. Vair will be placed in command of a bowling team which will make things hum on the 19th of August next. Mr. V. intends taking with him the trophy (?) won by his team last year, and will again put it up for competition.

A horticultural exhibition will be held in Buffalo during convention week (unfortunately) and several of the gardeners here who have large exhibition plants in their charge are talking seriously of sending over a car load for competition.

E.

Pittsburgh.

The members of the Florist Club will leave for Washington on the day express at 8 a. m. on Monday, August 15, via. the Pennsylvania Railroad, and arrive at 8:15 p. m. The company has promised to give the florists an elegant car for their own use for the trip. Through the generosity on the part of the railroad officials the rate has been placed very low, at one fare for the round trip, and reasonable limits have been assured for those desiring to extend their trip to other points. Any florist in our vicinity wishing to attend the convention is privileged to join our party at the same rate of fare. The fare will be $8 for the round trip between the two cities, and tickets can only be procured from E. C. Reineman, 39 Fifth avenue, to whom application should be made for same not later than Saturday, August 13. These tickets can not be had at the railroad station and are for florists and their friends only. We expect a very large delegation from our neighborhood, and as we meet the Chicago florists on the same train, and probably those from Cincinnati and St. Louis, quite a delegation will be massed together on arrival at Washington. E. C. REINEMAN.

PANSIES.

AS GOOD AS THE BEST, AND JUST A TRIFLE BETTER.

That is what my customers say, and they are in all parts of the United States and Canada—Maine to California, and Montreal to the Gulf of Mexico.

If care and attention will do it, they will be just a trifle better every season; quality is the first consideration, price the second, as an inferior strain of Pansies is dear at any price.

With superior facilities for handling trade and prompt attention to all communications I will make it a pleasure for you to deal with me and would respectfully solicit a trial order.

Good stocky plants from seed beds ready August 20th and after, at 75 cents per 100; $5.00 per 1000.

L. B. 338. ALBERT M. HERR, LANCASTER, PA.

FISHKILL, N. Y.

Mention the AMERICAN FLORIST when writing advertisers on this page.

Montreal.

The fourth annual picnic of the club came off July 28, about 200 being there. The morning looked like being wet, in fact there was a smart shower, which no doubt kept a good many at home. Those who went, however, had reason to congratulate themselves, for the day was almost an ideal one for a picnic—fine and warm without being too hot. A long programme of sports was gone through. In the tug of war the Gardeners proved too strong for the Florists, but the latter had their revenge in the cricket match, winning by a score of 27 to 23. The city was reached again about 7:30 after one of the most enjoyable picnics possible. Walsh is great at a catch. Trussell was out of practice. Whiting "stayed" first rate. Bland carried out his bat and a sore finger. Hopkins was feeling pretty good. The race between Doyle and Ross was one of the events of the day. Some one made the remark that Bill pulled his pants before they were fullgrown. "All's well that ends well."

Business is about at the lowest ebb; now every one is busy getting ready for winter again. Campbell is replanting a lot this year. Bain is building two more houses. H. A. Bunyard was in town last week and H. Simmers, Toronto, was in to-day. J. B.

If you have any really good thing to sell to florists, don't fail to show it at the trade exhibition at Washington in connection with the annual convention of the Society of American Florists. All the live men in the trade will be there, and they are the men who are quick to discern merit in anything that really possesses it.

Do you want an alphabetical list of the roses in commerce in America, with the class, habit, date of introduction, name of introducer, and a brief accurate description of each one, and with synonyms all noted? You will find such a list in our new trade directory and reference book.

NURSERIES: MENLO PARK, CALIFORNIA.

ADIANTUM CAPILLUS VENERIS

The coming Adiantum for the cut flower trade. The reasons why because it is
Best for the grower:
1st. Because it can be grown successfully in a greenhouse with a mixed collection of plants.
2nd. It can be bedded out on a bench or under the edge of a bench, and will last for several years.
3rd. It requires no season of rest.
4th. It will stand watering with the hose and fumigating with tobacco smoke.
Best for the Cut Flower man:
1st. Because of its density and dark green color; six fronds will go as far as twelve Cuneatum,
2nd. Because it will keep in perfect condition for from four to six weeks in the ice box.
Best for the Retail Buyer:
Because it lasts three times as long as Cuneatum. Customers ordering in our store almost invariably ask for the kind that don't wilt.
In buying see that you get the true variety, as it has many aliases. **Price, strong plants, $8 per 100.**

Owing to the heavy demand, our stock of this most desirable Fern, ready for immediate shipment, is getting low. In order to accommodate those who wish to make plantings later in the season, we will book orders now for delivery any time till July 1st. This will give florists who are now busy with their spring work an opportunity to secure their stock and have it delivered at a time when they can take care of it.

HAIL LOCK THE DOOR BEFORE THE HORSE IS STOLEN. DO IT NOW.

JOHN G. ESLER, Sec'y F. H. A., Saddle River, N. J.

Elmira, N. Y.

Mr. Grove P. Rawson was very busy arranging floral designs when your correspondent called on him recently. One piece, a gates ajar, was particularly handsome. The gates were made up of the pretty pansy Lord Beaconsfield, which he finds very useful as a substitute for violets when the latter are scarce. They give a very pleasing effect. Speaking of trade he said it had been particularly good. The demand for commencement flowers during June was very large, the call being especially for loose bunches of flowers, ten such arrangements being called for where one basket was ordered. This is quite a change from the demand of former seasons.

One idea of Mr. Rawson's, which is very popular with his customers, is to have any lettering that is wanted in connection with an arrangement printed in violet ink, in a script letter, on white ribbon about two inches wide. This, when laid carelessly across a piece of work, gives a very pretty effect and is much preferred to the usual immortelle lettering. His store has lately been refitted with every convenience and in process of erection are two immense greenhouses, one 370x26, the other 300x22, the first for roses and the second for carnations.

B.

Houston, Texas.

Business is dull; could not be any worse; every one that can get off is out of town. There are no weddings and very few funerals. Flowers are plentiful. The second crop of Cape Jasmines is about over, but roses are fine. One of our finest white flowers for cut flower work is the crinum. They are in full bloom now. The past season was the best we ever had in this city. There was a reasonable supply of flowers and prices were good. There was a great demand for pansies, roses, geraniums and coleus. The Niel was the favorite rose this season. All the florists are resting, but will soon be making their preparations for the fall trade. Wright is trying to sell his Washington street place. He is going to grow Cape Jasmines, and will move to Albion, where he has a large stock already started. It is said that Theo. Hillendahl is going to buy out Mr. Wright, but there is nothing certain. Mr. Hillendahl is president of the Harris County Chrysanthemum Society, which is to give a chrysanthemum show in November.
